That's not so . It probably does exactly as was intended for a "Tiny-Tenna"... For a good signal one should buy/build a full size aerial .

The Tiny Tena schematic is, or used to be on the Internet, I have seen it there before.
Here is something that works much better. Google,,, In the Gloaming Youtube

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast
bands used outside the USA. For multi-use bands, primary usage is shown.
Some stations operate outside official bands. Information is from Oct 2008
FCC rules and Sep 2009 NTIA manual, see Chapter 4 of:
http://www.ntia.doc.gov/osmhome/redbook/redbook.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is
5 kHz. Frequencies above 10000 kHz tend to propagate better during the day;
frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area.
Telephone lines present a potential shock hazard. Do not use this antenna
for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving
antenna. Performance will vary depending on the kind of phone line you
have. Overhead lines usually make okay antennas, while underground lines
| usually don't. Phone lines carrying DSL service may be unsuitable because
| DSL operates over a wide spectrum. A phone line antenna will generally
pick up more power line noise than a dedicated antenna, so don't expect to
| use it for DX work. Nevertheless, I found that it outperformed the
| telescopic whip antennas built into many portables.

A reader sent in this suggestion: If you're concerned about connecting
the phone line directly to the receiver, try wrapping the phone cord
several times around the receiver's telescopic whip antenna instead.
Performance may not be as good as a direct connection, but it will
probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought
much about it because thunderstorms are rare in my area. Most phone lines
have lightning arrestors on them where they enter the house, but the
lightning arrestors may pass enough energy during a lightning strike
damage a receiver. My suggestion is to disconnect the antenna when not in
use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and
receiver. The capacitor eliminates all phone line voltages, including
| ringing, so that they will not harm the receiver. The capacitor should
| be rated 250 volts or higher.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be
| purchased from shortwave dealers (see below for recommendations).

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

These filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

```
| RECOMMENDED FILTERS
|
| If you don't want to make your own filters, the following have good
| performance, are well-built and affordable:
|
| Model 400 BCB interference filter (3.5 MHz highpass)
| http://www.iceradioproducts.com/filtersrf.html#bcb
|
```

| Model 420 HF lowpass filter (30 MHz lowpass)
| http://www.iceradioproducts.com/filtersrf.html#3
| (scroll down a bit to see the model 420)
|
| If you have a random-wire antenna, the following unit will provide
| impedance matching and lightning protection (connect antenna to 450-ohm
| terminal):
|
| Model 182A beverage matching unit
| http://www.iceradioproducts.com/reconly.html#Beverage Matching

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)
Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.

```
--------||---+----||-----+----||-----------
} }
{ {
} }
-------------+-----------+-----------------
```

The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB

1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

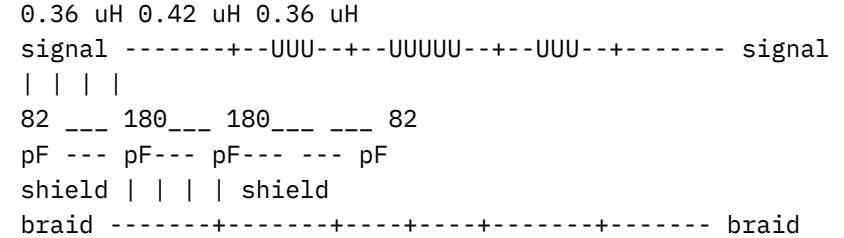
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



|
chassis ground

I had to do a little more improvising at this point. I used .33 uH
instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there
are 4 lugs plus a grounded lug. All "ground" connections go to the lug
that is mounted to the chassis, and the other 4 lugs are used for each
of the connections on the signal line. One terminal strip is used per
filter. Since both filters were necessary to clean up the hash, I am
going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means
you can't possibly hook them up backwards. (In the above schematics,
left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

Parts for the filters can be obtained from the following source:
http://www.digi-key.com/

Judging by all the exclamation marks on Tiny-Tenna's web page, it must be the greatest antenna ever! I bet it will receive the Liberty Net on the other side of the universe!

Multiple points? How many armed guards per school do you suggest? (there are ~ 130,000 schools in the US). Who will pay for all these people?

You -- and Mr. LaPierre (of the NRA) also seem to be overlooking something else...

He (and you) want armed guards at schools.

What you are overlooking is that both Columbine and Virginia Tech had one or more "armed guards" on premise during the shooting incidents at those institutions, and sadly it made NO difference in the outcome.

So there you have it...not one but two different real world examples of armed guards on premise NOT working.

Imagine my surprise, hearing from you on this issue. Nice to see you
again.

There are some very sad realities in the matter of human on human
crime. One is that it's not going to stop. That humans have a tremendous
capacity for predation.

The other reality is, that sometimes, best intentions go for naught in
the face of human frailty. I've known highly trained, armed police, who
were unprepared for the moment of truth. And hesitated. I've been to
more of their funerals than I can count.

An unfortunate truth, is, that like some volunteers in the military
during the 80's, many security guards take the job expecting no
incident. And, they are correct in this. There are 130,000 schools in
the US. How many shooting incidents in 230 years? And because they
expect no incident, they're unprepared when a shooting begins. And are
lost in their internal conflicts when it comes time to drop the hammer.
With very good reasons. That's a line that, once crossed, changes a life
for all time.

And if a trained security guard, or a trained police officer, is hesitant, it's ludicrous to expect a teacher, who has seen and interfaced these kids every day, to fire a lethal shot even when faced with their own mortality. Especially, given the political underpinnings that prosecute a student for a finger motion, or a pencil outline, implying a weapon.

Had you read what I actually wrote, instead of a hastily edited skim, you'd have noted that I acknowledged that an armed solution is problematic, any solution is problematic, here, regardless of who is taking up the weapon. Violence in schools is nothing new, but for the last century, school has been a place that's preached peace in all things. A violent solution to a violent problem is simply outside the culture.

But you're right, as always, of course. There ARE 130,000 schools in the US. How can we POSSIBLY pay for armed protection of the students in each of them.

Let's just let the predators have unresisted incursion at will.

Yes, much better thinking.

Good to see you, again, Joe.

Spanish is the second most popular language in the world,according to
Wikipedia. Over 400 Million native speakers .

How far down that list is English? I figure that languages like Hindi and
Cantonese are likely higher on the list.

Not even close. Saturday night I fired up my tiny-tenna and tuned in
The Great Liberty Nit-Wit-Net and here's what I heard:

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Not chipmunks, no smurfs, just nit-wits talking on The Great Liberty
Nit-Wit-Net.

Mandarin is the most used,of course...Followed by Spanish,English,Hindi etc. Again- this is by the total number of native speakers, not counting people using a different primary language . And English remains the most common tongue spoken/written worldwide on a regular basis.

To all radio amateurs

SB PROP ARL ARLP001
ARLP001 Propagation de K7RA

The New Year brings dreams of solar cycles of old, so distant now, sweetly remembered for their profusion of sunspots. We hear many times from operators who began in the amateur radio service as teenagers at the peak of Cycle 19. With youthful optimism, they naturally assumed that radio propagation would always be like that, when a few watts and a modest radiator on 10 meters spanned the globe during all the days and nights.

If you were age 13 to 17 in 1957 to 1959, the peak of Cycle 19, perhaps you were born between 1941 and 1945, and probably looked forward to the next peak in activity. That may have been a disappointment when Cycle 20 peaked around 1969, as that had a somewhat broader peak but at a far lower level. You can see it graphically at http://wm7d.net/hamradio/solar/historical.shtml. These young adults, now 24 to 28 years old in 1969, might be busy starting families and careers, and no doubt fondly recalling simpler times and the tremendous propagation of their younger years.

Cycle 21 peaked around 1980, and the former teenaged ham of Cycle 19 was now 35 to 39 years old. This was quite an improvement over the last cycle, as was Cycle 22, which looked like an echo of Cycle 21. Cycle 22 peaked around 1991-1992, with a more pronounced double-peak. The former teenager was now 47 to 51 years old, solidly into middle-age, and still wondering if sunspot activity would ever roar back to the levels of the late-1950s.

The following cycle, number 23, was another double-peak, but significantly lower in 2000 to 2002 than the previous cycle. Perhaps another disappointment for the now 56 to 60 year old ham, who then sees solar activity slide into a long and low minimum over the next decade, impossible to imagine 60 years earlier. The 160 meter operators, quite happy in this situation with a much quieter Sun,

have no such longing for the active Sun of yesteryear.

Now the young ham of the late 1950s contemplates the peak of Cycle 24, apparently much lower than any seen in most of the past century, and expected to grow to maximum this year. Now we have many more tools to observe and measure both solar activity and propagation, and we know that activity could still increase significantly. Some foresee decades of lower activity, but of course predicting future solar activity is a very tricky proposition, and anything could happen.

At
http://www.solen.info/solar/images/comparison_recent_cycles.png
you can see a comparison of recent cycles, from 21 to the current 24.

While we've seen a number of papers and predictions for a series of quieter sunspot cycles, some disagree. For instance, Michael Proctor, professor of Astrophysical Fluid Dynamics at Cambridge University is not convinced. He was quoted this year as saying, "This present cycle is similar to the weak one that ended in 1913, and that was followed by a strong cycle."

Those were Cycles 14 and 15, and Cycle 15 was only strong relative to 14. Cycles 17, 18 and 19 were stronger than 15, and so were 21, 22 and 23.

It is also important to remember there is wild variability in solar activity. To make those graphs of sunspot numbers appear smooth, each point on the graph actually represents an average of a year of data. When averaged, the flurry of solar activity at the end of 2011 and some future activity in 2013 could appear as a broad peak on a graph.

NASA looks frequently at their predictions for the current cycle, and often adjusts them every month. The latest shows a smoothed sunspot number a bit lower than the forecast from several weeks ago. In the December 10 forecast they predicted a smoothed sunspot number of 72 in the late in 2013, but that number is now 69 in the January 2 release. Note these are the lower international sunspot numbers, which are always less than Boulder numbers presented in this bulletin. Read the report at
http://solarscience.msfc.nasa.gov/predict.shtml.

With the change from 2012 to 2013, now is a good time to review sunspot numbers and trends. Average daily sunspot numbers in 2013 were up substantially from 2012. From 2004 through 2012 the yearly progression was 68.6, 48.9, 26.1, 12.8, 4.7, 5.1, 25.5, 29.9 and 82.3. I took all the daily sunspot numbers for 2012, added them together, and the sum was 30,133. Divide that by 366 (the number of days in 2012, a leap year) and the result is approximately 82.3. In 2011 it was 10,913 divided by 365, yielding 29.9.

The 2012 average was higher than any year after 2003. But at the peak of Cycle 23, the averages from 1998 to 2003 were all higher: 88.7, 136.3, 173, 170.3, 176.7, and 109.2. It seems unlikely that average daily sunspot numbers this year will reach anywhere near the level of 2000-2002.

We observe a moving 3-month average of sunspot numbers, in an attempt to smooth out some of the variations. Unfortunately, the past three months were much lower then the three month period ending one month earlier. The current average of 74.4, centered on November 2012, is lower than any three month period since averages centered on February and March of 2012.

The 3 month period previous to the current one is centered on October 2012, and covers September through November. The average then was 82.3. To recap averages from previous bulletins, the three-month moving averages of daily sunspot numbers centered on July 2011 through November 2012 were 63, 79.6, 98.6, 118.8, 118.6, 110, 83.3, 73.7, 71.2, 87.3, 91.5, 96.5, 91.9, 89.9, 81.2, 82.3, and 74.4.

Looking at the past week, yesterday we saw a sizable gain in solar flux, when the value went from 106.7, 113.6, 117.8, and 119 to 128.8, on December 30 through January 3. NOAA and USAF predict solar flux at 130 on January 4-6, 125 and 120 on January 7-8, 115 on January 9-10, 110 on January 11, 105 on January 12-13, 110 on January 14-17, 115 on January 18-20, and 120 on January 21-23.

Predicted planetary A index is 5 on January 4-12, 10 on January 13, 5 on January 14-25 and 8 on January 26.

F.K. Janda, OK1HH issues a weekly geomagnetic forecast. This week he says geomagnetic conditions will be quiet January 4, quiet to active January 5, mostly quite January 6, quiet January 7-9, quiet to unsettled January 10-12, active to disturbed January 13, quiet to unsettled January 14-16, quiet January 17-19, mostly quiet January 20-21, and quiet on January 22-26.

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net.

For more information concerning radio propagation, see the ARRL Technical Information Service web page at http://arrl.org/propagation-of-rf-signals. For an explanation of the numbers used in this bulletin, see http://arrl.org/the-sun-the-earth-the-ionosphere. An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. Find more good information and tutorials on propagation at http://myplace.frontier.com/~k9la/.

Monthly propagation charts between four USA regions and twelve overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are at http://arrl.org/bulletins.

Sunspot numbers for December 27 through January 2 were 78, 54, 49, 37, 87, 99, and 90, with a mean of 70.6. 10.7 cm flux was 106.8, 105.8, 104.3, 106.7, 113.6, 117.8, and 119, with a mean of 110.6. Estimated planetary A indices were 1, 2, 3, 4, 2, 1, and 3, with a mean of 2.3. Estimated mid-latitude A indices were 0, 2, 3, 4, 1, 1, and 2, with a mean of 1.9.

Yes, we do. That must be faced. In a way, it's the key to the whole problem. When people feel part of a unified community of kinship and shared values, there is much less violence within that society. We've lost that. And some of the others we've forced into, or invited into, our society are somewhat more predatory than even we are.

I'd still say that a widespread presence of armed ordinary citizens -- everywhere, not just in schools -- would go a long way toward discouraging the nutcases. And it would wonderfully discourage would-be tyrants, too.

The "gun violence" hysteria is largely, well, hysteria. We must see the problem in its correct proportions. Far more people die because of medical error, automobile travel, and tobacco use.

With all good wishes,

Kevin.

That reminds me of what Rex Stout famously said through his detective character Nero Wolfe: If someone of reasonable intelligence is absolutely determined to kill you ï¿½ you are going to be killed.

Law, in such cases, makes little or no difference. (And I am not so sure that murder is worse than law-making. But that's another subject.)

Some problems are insoluble. And others so nearly so that any "solution" is worse than the problem itself.

With every good wish,

Kevin Alfred Strom.

Indeed. Here in the former United States they are already building
their own wholly-owned combination cities / sweatshops / company
stores, with the permission of System politicians whose wallets have
suddenly become so fat that they can't sit down, that will be run on
their proven social model: A hive, basically, with overseers and
worker ants "working in blissful harmony."

Liberty Net: December 29, 2012

http://3950.net/2013/01/liberty-net-december-29-2012/

by Kevin Strom, WB4AIO

A NEW NET was born this week as Liberty Net participant Jim, AB3RA, moderated the very first session of the Survival Net, which is now scheduled for each Sunday night at 9PM Eastern Time on the same frequency that the Liberty Net has been using most often lately: 3983 kHz.

The Survival Net focuses on how you and your family can best prepare for natural disasters and societal breakdown, having fun and maximizing your liberty in the process. If the first meeting is any indication, this is going to be a lively and very educational net indeed. Iï¿½d like someone to volunteer to man the discussion room, and record and stream the audio for the Survival Net, as I am not always going to be available at that time. Any Survival Net recordings I am able to make will be posted with the Liberty Net files in the usual locations on this site.

Al, N2SAG, is now running a most welcome phone patch during the Liberty Net ï¿½ some participants have dubbed it the ï¿½Cabbage Patch,ï¿½ just as they named Marty, N2IRJï¿½s patch the ï¿½Briar Patch.ï¿½

Hereï¿½s a tiny selection from the concepts put forth on the Liberty Net this time:

ï¿½ Even the banker-controlled (and illegal) regime that misrules Greece has admitted that a partial default on Greeceï¿½s bank debt is necessary. What the Golden Dawn and other patriots should push for is a total repudiation of all the bankersï¿½ phony debt. Fractional reserve bank debt is a scam and neither the Greeks, nor us, nor anyone, owes the bankers a single centime. (11 minutes)

ï¿½ When easily-fooled people rant about how wonderful it would be to go back to confiscatory tax rates for ï¿½the rich,ï¿½ they forget that those Roosevelt-imposed (and illegal) taxes were supported ï¿½ and easily evaded ï¿½ by the super-wealthy with their foundations and tax-free investments. The real effect of such high taxes is to prevent anyone from ever rising to challenge the wealth and power of the ultra-rich oligarchs. (25 minutes)

ï¿½ If you want to understand how many of modern Americaï¿½s problems began, and how certain insane ideas began to take hold here, a good place to start is Thomas DiLorenzoï¿½s book The Real Lincoln. (41 minutes)

ï¿½ The very existence of bankruptcy laws ï¿½ which allow an individual to escape crushing, unpayable debt for cents on the dollar ï¿½ is an acknowledgement that the debt-slavery system we live under is untenable and that there is no moral basis for ï¿½paying backï¿½ what was created out of nothing. (48 minutes)

ï¿½ Why did Putin ï¿½ in many ways a patriotic nationalist and opponent of the oligarchs ï¿½ support internationalist oligarch-puppet Obama in the recent US election? Simple: Putin correctly sees the regime in Washington as a force for evil and tyranny in the world, and thus a grave threat to the self-determination of Russia. So anything that weakens the US regime ï¿½ including electing Obama and empowering his disgusting constituency ï¿½ is a good thing. (1 hour 16 minutes)

ï¿½ The Washington regimeï¿½s global drone war is illegal, unconstitutional, and immoral and must be stopped by any means necessary. (1 hour 19 minutes)

ï¿½ Instead of subsidizing their immigration, a patriotic government would subsidize the emigration of aliens ï¿½ which would benefit the freedom and self-determination of all peoples. Immigration should be strictly limited to those who are biologically indistinguishable from the existing population. Anything else is genocide. (1 hour 42 minutes)

ï¿½ Prohibition of guns is likely to be as wildly successful as the prohibition of alcohol was. Furthermore, the control freaks never even suggest that thugs with badges should have their guns taken away from them ï¿½ and theyï¿½re the ones we should be most afraid of. (2 hours 25 minutes)

ï¿½ A double proof 1) that the bankers and their government are destroying the dollar and 2) that Americans are getting dumber and dumber is the fact that sugar producers are now selling sugar in 4-pound instead of the customary 5-pound bags. This makes their product look cheaper to unobservant fools. The same sleazy tactic by many companies now, sad to say. (2 hours 32 minutes)

The Liberty Net ï¿½ amateur radioï¿½s longest-running current events discussion net ï¿½ is on the air every Saturday night at 10PM Eastern Time on or around 3950 kHz SSB (usually higher in frequency ï¿½ recently around 3983 ï¿½ to avoid interference). You might have to tune around, but weï¿½re not hard to find.

Remember, thanks to our multiple audio feeds, youï¿½re likely to be nearly interference-proof! So please check in. And, as always, you can download the net recording right here at http://3950.net and listen at your leisure.

Orange juice is now sold in 59 ounce cartons instead of the standard
64 ounce half gallon. Ice cream is sold in 1 1/2 quart cartons instead
of the once standard 1/2 gallon. Candy bars weigh about 3/4 of what
they once did. But each costs quadruple what the larger quantity
product did.

The list of consumer ripoffs in the grocery store, and elsewhere, is
endless. That is what happens when you have so called institutions of
"higher learning" grinding out MBA's. It was a much better and fairer
America when "mom and pop" businesses were the rule and not the
transnational corporate predators and their "educated" errand boys/
girls.

I would respectfully disagree with you.

If by "nutcase" you are referring to a person that is crazy/mentally ill/insane, and you are proposing to use reason and logic with said person...almost by definition, nutcases do NOT follow reason and logic. That is why they ARE nutcases.

P. S.

After seeing the people that got guns for Columbine, the Arizona congresswoman Gifford case, the Aurora theater and Virginia Tech, screening for mental illness when buying weapons appears to be between slim and none.

Thus your "WIDESPREAD presence of armed ordinary citizens" proposal, some of whom may not be wrapped too tight themselves, would INCREASE the magnitude of the problem.

They're all crooks
Blah blah blah.

Throughout the evening, the discussion moved on to other topics,
including ..

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

And in the wee hours of Sunday morning, The Great Liberty Nit-Wit-Net
ended with ..

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Tune in next Saturday night at 10pm Eastern time for new and exciting
topics including

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

The most polite people I've ever met are at the pistol range. Go figure.

As for discouraging tyrants....we're at the place in the cycle of a democratic society, where the people are clamouring for a tyrant. Calls for evermore laws for every conceivable circumstance. Demands for the banning of weapons, motorfuel, substances, pictures, and modes of thought surface with eery regularity. Along with calls for the altering of the fundamental structure of our nation.

An armed, prepared, trained and committed citizenry would go a long way toward mitigating this.

But, then, that would make the government answerable to the people, and the Political Class can't tolerate the thought of that.

radio/monitoring/shortwave-faq
Subject: Welcome to rec.radio.shortwave (Shortwave)
Maintainer: ralph@cbnews.cb.att.com (Ralph Brandi)
Last Posted: 28 Jun 1996 00:09:45 GMT

We have been informed by the readers of rec.radio.shortwave that a |
recent (2008) attempt to update these documents and post them (or links |
to them) at regular intervals, has since been abandoned, so the project |
is once again open to a sincere and motivated volunteer. |

We are interested in offering any technical support necessary to get
these articles updated and automatically posted again at regular
intervals. This would include establishing contact with the original
maintainers for any necessary permissions. We would prefer to seek new,
dedicated maintainers at this time, rather than start auto-posting the
original articles ourselves.

For more information about our newsgroup, see:
```

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

#
# Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
31 December - 06 January 2013

Solar activity ranged from very low to moderate. The summary period
began on 31 December with very low levels. Low levels were observed
on 01 January due to a single C1/Sf flare at 01/0906Z from Region
1640 (N28. L=323, class area Eho/360 on 06 January). A return to
very low levels existed on 02 January. Low levels returned on 03
January due to a single C1 event from Region 1640. 04 January
witnessed numerous C-class events, the largest a C2 long duration
event (LDE) from Region 1652 (N20, L=187, class area Dao/120 on 06
January) that began at 04/2346Z, peaked at 05/0018Z and ended at
05/0119Z. Associated with this event was a 170 sfu Tenflare. Earlier
on 04 January, Region 1639 (S16, L=311, class/area Dao/090 on 28
December) produced a C1 LDE that began at 04/0822Z, peaked at
04/0918 Z and ended at 04/1034Z. Associated with this event was a
coronal mass ejection (CME), first observed in STEREO A COR2 imagery
off the SE limb at 04/0924Z. Activity increased to moderate levels
due an impulsive M1 event observed at 05/0931Z from Region 1652. A
return to low levels was observed on 06 January. The largest event
on the 6th was a C3 event at 06/0303Z from Region 1653 (N09, L=185,
class/area Cso/030 on 06 January). By the end of the summary period,
a total of 14 spotted regions populated the visible disk.

No proton events were observed at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit was at
normal levels.

Geomagnetic field activity was quiet. Solar wind speed, measured at
the ACE spacecraft, ranged from a high of about 480 km/s at the
beginning of the period to a low of near 275 km/s late on 05
January. The interplanetary magnetic field (IMF) Bt ranged between 1
to 9 nT while the Bz component of the IMF varied between +7 to -6
nT. Phi angle was observed to be in a positive (away) orientation
```

for a majority of the period. Intervals of negative (towards)
orientation occured between 31/0000Z to 02/0445Z and again from
about 06/1300Z through the end of the summary period.

Forecast of Solar and Geomagnetic Activity
07 January - 02 February 2013

Solar activity is expected to be at low levels with a chance for
M-class activity through 18 January when active Regions 1650 (S29,
L=194), 1652 (N20, L=187) and 1653 (N09, L=185) rotate off the disk.
Very low to low levels are expected to persist through 21 January.
>From 22 Janaury through the end of the outlook period, low levels
are expected with a chance for M-class activity as old Region 1640
(N28, L=323) is due to return.

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is
expected to be at normal to moderate levels through the outlook
period.

Geomagnetic field activity is expected to be at quiet to unsettled
levels on 07 - 08 January due to the influence of a geoeffective CH
HSS coupled with possible glancing blow effects from the 04 January
CME. With the exception of 13 January, 20 - 21 January and 26
January when recurrent CH HSS are expected to become geoeffective,
quiet conditions are expected to persist through the outlook period.

WILMINGTON, Delaware (Reuters) - In a case U.S. officials say is the
first of its kind, a Chinese businessman pleaded guilty Monday to
selling stolen American software used in defense, space technology and
engineering - programs prosecutors said held a retail value of more
than $100 million.
Story continued at
http://news.yahoo.com/chinese-man-pleads-guilty-100-million-stolen-software-014958638.html

Not much coverage of this in the national media but when a redneck
hick from Mississippi gets drunk and scrawls a swastika on the
sidewalk there is nonstop coverage with bulletins on the hour about it
the white supremacist hate crime. Go figure.

Beautifully designed site, Jeff. Tim's language can be a little raw
sometimes, but it's never malicious -- just earthy and funny and
mocking of things that often deserve to be mocked.

He's a real radio treasure and icon of free speech. I'm glad to see
his spontaneous creation has a home now.

On http://3950.net I recently put up two short audio files of Tim's
famous phonetics for his name and call.

73 and good luck in the contest,

Kevin, WB4AIO.

HF-225 is good HF-225E is better.

The differences can be seen here:

http://www.universal-radio.com/catalog/commrxvr/hf225.html

I've currently got, and use a Lowe HF-150. And it's a fine radio.
Quiet. Good audio. Very nice performance with a decent antenna,
although, with the preamp switched in, sensitivity on a whip is nothing
to sneeze at.

What you'll like about the HF-225 is the low noise floor, the very
good selectivity, the small desk footprint, and the reasonably simple
operation.

Cosmetically, it's kind of plain. But this is more than made up for
by it's performance.

The Europa model has higher spsc filters, and a factory installed FM
and Sync. These were optional extras on the base model 225, and not
easily found, if at all.

If you can find an HF-225, take it. You'll never regret it.
Superceded in the line by HF-250 which is a little more visually
compelling, with moderate improvements in performance over HF-225.

You'll pay about $500, more or less for either of them. Buy
carefully, and get a hands-on evaluation before you drop your cash.

For about the same money, you can find an Drake R8, or R8A. Or one of
my favorites: Ten-Tex RX-350/D. But you'll not regret the Lowe.

Besides, everyone should have at least one John Thorpe radio.

You felt it necessary to reply to a 14 and a half year old post, yet can't
even bother adding some sort of reply?

Newsgroups are not a playground. If you have something to say, say it.
Don't go randomly "reposting" old messages. Don't reply to old messages,
if you have something important to say, then start with a fresh post.
Turnover is high, so virtually nobody from even a few years ago is still
reading the newsgroup, and given many of the posts, are often one time
only, they post and are never heard from again.

Just because google still hasnt' fixed the bug to allow replies to old
messages doesn't mean one should reply. The original poster has long ago
given up on the matter if they didn't get an answer, and yet simply
posting some 14 year old message leaves out the context of what others
said at the time. Much of the time, though not this one, there is a long
thread going with the original post, but the clueless who think google is
usnet are the only ones who see the old emssages, since they've long
expired elsewhere.

Michael

I tell you what's a radio treasure, Kevin.
The Great Liberty Nit-Wit-Net.
Nothing else comes close.

Every Saturday night, The Great Liberty Nit-Wit-Net opens with . .
Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Later in the evening, the discussion moves on to other topics like
Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Finally in the wee hours of Sunday morning, The Great Liberty Nit-Wit-
Net ends with ..
Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

What it was, this afternoon I was listening to 96.8 Radio Cymru in Cardiff, Wales on my Sony Google TV set. I couldn't find 96.8 on my Aluratek Clock Internet Radio in the UK listings, streaming radio on the Internet. Somewhere on the Internet I saw that Station Identification thingy. I don't know about nowadays but I do know Radio Cymru used to shut down from 12:00 AM to around 6:00 AM every day,Brit time zone which is six hours ahead of my time zone.

http://thetrenches.us/2012/05/10000-to-anyone-who-provides-the-college-transcripts-of-president-barack-obama/

Update: 5/21/ 2012 • Due to additional support from the community we•re raising the bounty for Obama•s transcripts to $20,000.

You•ve failed, media.

You•ve had over three years to vet President Barack Obama. Yet in three years in office and over a year of campaigning beforehand, you have either been oddly uninterested or purposefully ignorant of Barack Obama•s educational history. You were, however, quite interested in George Bush•s transcripts.

This uncharacteristic absence of curiosity about an American president alarms us. At $15 trillion, our nation•s debt is the highest it has ever been • and it keeps growing. We•re not convinced that Barack is as smart as you media elitists keep insisting he is.

We therefore offer in reward $10,000 $20,000 to anyone who provides the college transcripts of President Barack Obama. Occidental, Harvard, Columbia•any would represent more intellectual curiosity about the leader of the free world than the media has demonstrated since Obama won the Democrat primary.

Upon obtaining any of these transcripts, please contact war[at]thetrenches[dot]us for verification and payment. This offer goes into effect immediately.

Media, your stranglehold on the truth ends NOW. Let the vetting begin.

Bellum Letale

Let•s •spread the wealth around• to vet the prez. If you•d like to donate to this initiative (so we can increase the bounty) or our upcoming initiatives, click the donate button.

85. Muslim Obama's hatred of Christians. Beheading for apostasy - graphic.

Newsgroup: rec.radio.shortwave
Date: 2013-01-11 14:54:21 UTC
From: Liberals Are Next <muslims.hate@everybody.com>
Message-ID: <c2942320488a19d8a340a6a7df63b496@msgid.frell.theremailer.net>

http://www.aina.org/news/20120606104355.htm

You can watch beheading at aina.org link without signing in to youtube.

http://youtu.be/sxGWlOQZyEs

Liberal talk show host Tawfiq Okasha recently appeared on "Egypt Today" airing a video of Muslims slicing a young man's head off for the crime of apostasy, in this case, the crime of converting to Christianity and refusing to renounce it. The video--be warned, it is immensely graphic--is embedded here (the actual execution appears from minute 1:13-4:00). For those who prefer not to view it, a summary follows:

A young man appears held down by masked men. His head is pulled back, with a knife to his throat. He does not struggle and appears resigned to his fate. Speaking in Arabic, the background speaker, or "narrator," chants a number of Muslim prayers and supplications, mostly condemning Christianity, which, because of the Trinity, is referred to as a polytheistic faith: "Let Allah be avenged on the polytheist apostate"; "Allah empower your religion, make it victorious against the polytheists"; "Allah, defeat the infidels at the hands of the Muslims"; "There is no god but Allah and Muhammad is his messenger."

Then, to cries of "Allahu Akbar!"--or, "God is great!"--the man holding the knife to the apostate's throat begins to slice away, even as the victim appears calmly mouthing a prayer. It takes nearly two minutes of graphic knife-carving to sever the Christian's head, which is then held aloft to more Islamic cries and slogans of victory.

Visibly distraught, Tawfiq Okasha, the host, asked: "Is this Islam? Does Islam call for this? How is Islam related to this matter?�These are the images that are disseminated throughout the electronic media in Europe and America�. Can you imagine?" Then, in reference to Egypt's Muslim Brotherhood and Salafis, whose political influence has grown tremendously, he asked, "How are such people supposed to govern?"

In fact, only the other day a top Egyptian Salafi leader openly stated that no Muslim has the right to apostatize, or leave Islam, based on the canonical hadiths, including Muhammad's command, "Whoever leaves his religion, kill him." Islam's most

authoritative legal manuals make crystal clear that apostasy is a capital crime, punishable by death.

The first "righteous caliph," a paragon of Muslim piety and virtue, had tens of thousands of people slaughtered--including by burning, beheading, and crucifixion--simply because they tried to break away from Islam. According to the Encyclopaedia of Islam, the most authoritative reference work on Islam in the English language, "there is unanimity that the male apostate must be put to death."

Finally, a word on the "prayers" or supplications to Allah made by the Muslim executioners in the video: these are standard and formulaic. It is not just masked, anonymous butchers who supplicate Allah as they engage in acts of evil; rather, top-ranking Muslim leaders openly invoke such hate-filled prayers.

See here for examples of prominent Muslims supplicating Allah to strike infidels with cancer and disease "till they pray for death and do not receive it," and even formalized prayers in Mecca, blasted on megaphones as Muslims pilgrimage and circumambulate the Ka'ba, supplicating Allah to make the lives of Christians and Jews "hostage to misery; drape them with endless despair, unrelenting pain and unremitting ailment; fill their lives with sorrow and pain and end their lives in humiliation and oppression."

"Is this Islam?" You decide.

Yawn...here we go again. :-(

The birther kook tards apparently gave up on the birth certificate issue and are now whining about the college records. Do you really believe Obama would have been made president of the Harvard Law Review if he had lousy grades???

Finally, please consider the following FACTS:

1) The Wall Street Journal is VERY conservative Republican.

2) The WSJ has no love lost for Obama.

3) The WSJ has a whole fleet of investigative reporters.

4) The WSJ concluded that Obama IS a US citizen.

If there was a "scandal" about his college record, don't you think the conservative, Republican WSJ with all their investigative reporters would have dug it out by now?

P.S.
Just curious, but why did you include "alt.activism.children" and "ca.earthquakes" on your distribution list???

To all radio amateurs

SB PROP ARL ARLP002
ARLP002 Propagation de K7RA

After last week's somewhat downbeat look at sunspot cycles, current, past and future, we sure have some great activity to report this week.

The average daily sunspot number more than doubled in the past week, rising nearly 93 points to 163.3. Average daily solar flux was up more than 37 points to 147.7. On top of that, the geomagnetic conditions were very quiet, which is a wonderful combination, not often seen in more active solar cycles.

There is a bit of uncertainty regarding the mid-latitude A-index on January 5-6. Some sort of outage for 24 hours blocked the data (from Fredericksburg, Virginia) on 8 consecutive 3-hour readings from late January 5 (UTC) through early January 6. The mid-latitude K-index tracked closely with the planetary K-index from January 3-9, so if the data were not missing, the January 5 mid-latitude A-index would probably have been a little higher, and the January 6 mid-latitude A-index a little lower than reported. The daily A-index is based solely upon the eight K-index readings throughout the day.

Currently NOAA and USAF predict solar flux values of 175 on January 11-12, 170 on January 13-14, 165, 150 and 125 on January 15-17, 105 on January 18-19, 110 and 120 on January 20-21, 125 on January 22-24, 130 on January 25-28, 135 on January 29, 140 on January 30 through February 1, then 135, 140, 135 and 130 on February 2-5, and 125 on February 6-7.

A predicted planetary A index is 5 on January 11, 8 on January 12-13, 5 on January 14-19, 8 on January 20-21, 5 in January 22-25, 10 on January 26, 5 on January 27 through February 2, 8 on February 3-5, 5 on February 6-8, and 10 on February 9.

The forecast is from January 10, and the solar flux portion is identical to the same report on January 9. The A index portion is only slightly different on a couple of days, otherwise the same as Wednesday's forecast.

OK1HH has an updated geomagnetic activity forecast. He says to watch for quiet to unsettled conditions January 11-12, active to disturbed January 13, quiet to unsettled January 14, mostly quiet January 15, quiet to active January 16, quiet on January 17-19, mostly quiet January 20-21, quiet on January 22-25, mostly quiet January 26, quiet to active January 27, quiet January 28-29, mostly quiet January 30-31, and quiet again on February 1-2.

Howard Lester, N7SO of Schuylerville, New York recently saw his wire antennas go down in a big wind. The former inverted vee is now suspended two feet above ground at the feedpoint, and 12 feet above ground at each end. So it is now an actual upright V instead of an inverted vee. Howard was excited to see what he could work this week with the fast rising solar flux and sunspot numbers.

He wrote, "Mysteriously, the antenna system still loads with identical settings on my transmatch. So I decided to try transmitting, called a guy on SSB in Germany, and he came back to me with a nice signal report. Then a guy in Greece. And on 17 CW I broke through a little pileup to Iceland."

This was from January 9-10. On January 10 he wrote, "I made a couple of contacts on 15 SSB to Poland and to eastern Ukraine, both less than 1 hour after sunrise. They're all using giant antennas, so no wonder they hear me. It seems awfully early in the morning this time of year for 15, let alone 12, to be open, except that the flux is so high right now.

"I just worked OZ1ADL, Jan, in Galten, Denmark on 12 meter SSB. He gave me a 59 report, and was especially surprised after I described my antenna situation. But, HIS antenna is a 13-element log periodic at 100 feet."

With the fast-rising solar flux this week, it has been fun to examine the thrice daily readings from the observatory at Penticton, British Columbia.

Check ftp://ftp.geolab.nrcan.gc.ca/data/solar_flux/daily_flux_values/fluxtable.txt and look at the first column on the left for date, second column for time and the fifth column for observed solar flux. Daily readings are at 1800, 2000 and 2200 UTC, but the 2000 UTC reading (local noon) is the official solar flux number for the day.

Carl Luetzelschwab, K9LA of Indianapolis, Indiana has some observations on recent solar activity. Carl wrote, "The New Year welcomed us with a nice increase in solar activity. In the past several days I, along with many others, worked A45XR and A65BP (and others) in the late morning hours on 12m and 10m via long path to

the southwest from here in the Midwest. I even worked VU2XO on 10m SSB via long path (to the south) at 1638z on Friday January 4 - he was extremely weak but workable.

"These QSOs are good examples of low probability openings, and they were aided by the increased aforementioned solar activity. VOACAP predicts these openings (even at low solar activity), along with many other low probability paths. You just have to be there when they happen.

"Both ends of the path are looking toward the equatorial ionosphere, with the highest MUFs in the world (even at low solar activity). Our end of the path is in daylight, which of course is good for these higher band QSOs. The other end is past sunset, but not far enough past sunset to have the MUF decrease significantly - thank goodness the ionosphere recombines much slower after sunset than it ionizes at sunrise. And more than likely this wasn't conventional multi-hop - I suspect chordal hops that kept the losses down."

Thank you, Carl.

Several readers had comments about past solar cycles. Lou De Chiaro, WB2IJT of Lindenwold, New Jersey wrote, "I was fairly active on HF during the late 1960s when Cycle 20 peaked. At the time, my rig was a Heath SB-300 receiver and SB-400 transmitter running around 100 watts CW output. My largest HF antenna consisted of a rhombic that measured around 40 feet in the short dimension and about 300 feet in the long dimension. The best propagation results happened on 10 meters during the 1969-1970 period, and I both observed 20 dB/S9 signals and received equally glowing reports from several VK and ZL stations on both CW and SSB. My QTH at the time was in northern NJ. Since then, I have unfortunately not seen signals of comparable strength from 'down under,' though one always wants to remain hopeful."

Ken Bourke, N6UN of San Diego, California wrote, "I was born in 1940 and fit the age group that you talk about and the expectations we had. I enjoyed the current article about this age group as it moved thru the 11 year sunspot cycles and it is very accurate and true. No cycle compares to the 1958 one.

"We old QCWA hams always hope and think we will have another cycle like that 1958 one, but it never has happened. In 1958 I was 18 years old, in Illinois (W9ZVG, Extra Class), with 1 KW and a quad at 60 feet. But I even got bored working so many DX countries. I did not know I was experiencing a once in a lifetime event. 15 meters was also hot. I made a tape recording of the crowded 10 meter band on old tape at 7.5 ips.

"But I always thought the band would come back like that 1958 event every 11 years, but it never has come back like 1958. I still keep hoping and do think some cycle in the future will be even stronger,

with a higher daily 23 cm solar flux than our 110 or 120 today, like over 150 or 200 daily, solar flux which might occur with a big long term solar eruption and massive solar wind. I keep waiting for a lot of long term continuous solar activity."

Fortunately, solar flux this week is actually over 150, rising to 174 on January 10 and predicted at 175 on January 11-12.

Tom Gallagher, N6RA of San Francisco, California wrote, "I was one of the lucky ones to be on the air and hunting DX in the 50s. I'm now 70. I was licensed in 1955 as KN4DRO in Miami at the age of 12. I quickly got into DXing (having been an SWL DXer at the age of 10 and a BC band DXer at the age of 6 when my parents gave me my own little BC band radio). In 1958 I received DXCC #3698. I had about 210 countries when I went off to college in 1960 (I was actually the #9 DXer in the state of Florida with my puny station when I went off to college). I had a very modest station--50 watts on CW and AM (I had 140 countries on AM phone) with a 2 element quad at 30 feet. My experience during the various sunspot cycles was very much like you outlined. I had them all for a while, but missed South Sudan (haven't sent in the new PJ cards yet).

"6 meters has taken my interest in the last 13 years or so. There seem to be a lot of geezer HF DXers on 6! I had hopes of making DXCC on 6, but it's harder than I ever envisioned from the West Coast and the sunspots don't seem to be cooperating. I do have some juicy DX on 6 from 2001, such as Z22JE, ZD7, 3W, DU, VR2, etc."

Before closing, check out a couple of interesting articles about solar activity at http://earthsky.org/space/nasas-three-minute-solar-cycle-primer and http://earthsky.org/space/frank-hill-sees-future-sunspot-drop-no-new-ice-age.

It's funny how they only offer $20,000. Out of all the people who
believe that Obama is lying about his college transcripts, they can only
come up with $20,000?!

I won't do any research for anything less than a cool million.

This past Saturday night, The Great Liberty Nit-Wit-Net opened
with . .
Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Later in the evening, the discussion moved on to other topics like
Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Finally in the wee hours of Sunday morning, The Great Liberty Nit-
Wit-
Net ended with ..
Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

As usual we thank net control for providing a completely new agenda of
topics never before discussed on ham radio nets.

Tune in tonight when The Great Liberty Nit-Wit-Net will open with . .
Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Later in the evening, the discussion will move on to other topics
like
Blah blah blah
Clinton's a crook

Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Finally in the wee hours of Sunday morning, The Great Liberty Nit-

Liberty Net: January 5, 2013

http://3950.net/2013/01/liberty-net-january-5-2013/

by Kevin Strom, WB4AIO

WE WERE SADDENED to learn of the death of long-time Liberty Net participant Joe Rogers, W8LDW, last week after a hard-fought battle with cancer. He was born in 1943 in Dallas, Texas. Joe was an electrical engineer with Peerless Technologies where he worked on aviation projects, public and private. I always learned something from his transmissions, and, whether he agreed or disagreed with others, he invariably expressed himself like a real gentleman.

Hereï¿½s an excerpt from the Liberty Net of September 29th, featuring Joeï¿½s transmission:

http://liberty.3950.net/W8LDW%20from%20Liberty%20Net%202012-0929%20via%20SDR.mp3

As fellow net participant Dieter Hauer, K3DK, said ï¿½His insight, words of wisdom and friendship will certainly be missed on our weekly radio net. Rest in peace Joe.ï¿½

Here is a sample of the ideas put up for your consideration on the Liberty Net this time:

ï¿½ A renewed America would restore the immigration policy that was put into effect by the Founders: one based on race. (16 minutes)

ï¿½ Sean Hannity has now come out totally in favor of legalizing the Mestizo invasion of the United States. If youï¿½re surprised by this, you havenï¿½t been listening to the Liberty Net. (19 minutes)

ï¿½ The obvious program of the billionaire oligarchs to replace the White population with non-Whites should be called by its real name: genocide. (30 minutes)

ï¿½ In the midst of the media frenzy about the Newtown shootings, in Chicago eleven people were shot in the first few hours of the new year ï¿½ but the controlled media made little or no mention of those deaths. (32 minutes)

ï¿½ The idea that ï¿½law enforcementï¿½ inherently has the right to possess weapons which are not permitted to us is a dangerous and false idea, whose final result can only be tyranny. (50 minutes)

ï¿½ The current coalition in Western nations between Islam, the kept left, and the Jewish power structure is bizarre and probably

unstable. Little unites these groups except a passionate hatred of us. (1 hour 24 minutes)

ï¿½ At the same time that aliens secured total control of Americaï¿½s money system through their ï¿½Federal Reserveï¿½ 100 years ago, our motion picture industry was also being taken over by the same ethnic gang. (1 hour 42 minutes)

ï¿½ A maverick bank, the oldest bank in Switzerland ï¿½ older than the United States, in fact ï¿½ has been forced to close because of a huge fine demanded by the regime in Washington. The bankï¿½s alleged crime? Respecting its depositorsï¿½ financial privacy and refusing to hand over private, confidential information on them to the Washington criminals. (1 hour 52 minutes)

The Liberty Net ï¿½ amateur radioï¿½s longest-running current events discussion net ï¿½ is on the air every Saturday night at 10PM Eastern Time on or around 3950 kHz SSB (usually higher in frequency ï¿½ recently around 3986 ï¿½ to avoid interference). You might have to tune around, but weï¿½re not hard to find.

Remember, thanks to our multiple audio feeds, youï¿½re likely to be nearly interference-proof! And, as always, you can download the net recording right here at http://3950.net and listen at your leisure.

I've often wondered, how it is that Washington gets the Swiss Banking System, renowned for its neutral independence, to acceed to Washington's demands concerning depositors' financial privacy. I mean, seriously, how does one sovereign nation order a bank in another sovereign nation to comply with its demands, against the host nation's own laws? Short of extortion, there is no way to accomplish this.

But, more importantly, when one nation begins to press interfering fingers in another's internal matters, which benefits? And, by precedent, which loses the right to remain a sovereign nation.

And consider this...which entity was so threatened by the operation of this 'maverick bank' that this hammer was levelled? A Government? Or another banking entity.

You seem to have "conveniently" overlooked the rest of the story.

From the BBC (http://www.bbc.co.uk/news/business-20907359):

> The bank had admitted to allowing more than 100 American citizens to
> hide $1.2bn from the Internal Revenue Service for almost 10 years.

Not an "alleged" crime of the bank. The bank *admitted* to *KNOWINGLY*
doing something illegal...for years. Period. End of report.

I didn't overlook that, though I refuse to characterize the good
guys as criminals and the arrogant, life-destroying lawbreakers of
the occupation regime as anything but what they are.

The "Internal Revenue Service" is a criminal organization,
fraudulently imposed upon the American people, and every single one
of its thousands upon thousands of brutal imprisonments of
Americans, and seizures of property and real wealth from them and
their families, is a hideous crime, in both the moral and legal senses.

Financial privacy can never be a crime in the moral sense.

With all good wishes,

Kevin Alfred Strom.

The crime of hiding money from IRS would be that of the American citizens who were doing so. The bank, acting in accordance with Swiss law, maintained the confidentiality of the accounts. As they have done since their inception. As they have done and continue to do for depositors of every other nationality. No Swiss crime involved.

Had there been so, Switzerland would have sanctioned the bank years ago. Since there was no Swiss crime, the US had to pressure Switzerland into taking this action. The question is: Given the lack of reciprocal agreement between the US and Switzerland, by which means of extortion did the US convince Switzerland to sanction the bank, acting in accordance with Swiss law, for crimes against US law.

The bank's alleged crime is as described above: Maintaining depositors' financial privacy. Illegal to US. Required by law in Switzerland.

It does seem odd at first glance, but perhaps not so odd when you consider that 1) the banking cartel in the West has the Washington regime almost totally under its control, 2) some, perhaps most, of the Swiss banks are independent of -- and even opposed to -- that cartel, and have made billions over the years helping freedom-minded families protect themselves from it, and 3) many banks in small countries are quite dependent on the good graces of the governments of larger states, where they must do business or go under.

As the criminal regime in Washington and its owners extend their laws and their control over more and more nations and solidify their control where they already rule, the position of the independent Swiss banks is becoming increasingly untenable. They probably have to be absorbed by the Empire, or die.

Unless, of course, Russia decides that they've had enough of the rule of the oligarchs, and does to them worldwide what they did to them at home. One can always hope!

You know, Kevin, the more you go on, the more I'm inclined to research. The more I research, the more I find that supports a good number of your positions. And, the more I'm reminded of Ben Franklin's response to a question as he left the Constitutional Convention about which kind of nation were they building.

"A Republic. If you can keep it."

I think we have lost that political will.

Sadly, in the blissful ignorance of 'it can't happen here', we have lost two very important institutions to the radicals. Two institutions vital to the maintenance of a free and healthy society: The Schools, and the Press.

And the creation of the Central Bank, with all of its secrets, and all of its power, suggests that Washington was lost more than a century

ago.

Given that this country was formed as a sovereign nation with less than 30% of the population in agreement to move against the Crown, there is, and always will be hope that we've not lost the Republic. But, ignorance and apathy are widespread. And, like Rome, we have our Third Millenium 'bread and circuses.'

We are in grave jeopardy.

> That is why they ARE nutcases.

Well, I am not so sure about that.

Many mentally ill people often have grandiose fantasies of revenge, fame, infamy, or battle with imaginary enemies -- without losing their desire to survive, or their awareness of consequences. And, even if they care nothing at all for their own lives, they can still be stopped one Hell of a lot more quickly if every other Joe and Sally has a handy .38 special.

I am not at all enamored of a world in which only the police, the secret police, and the military have guns -- for two reasons.

One is that any free man or woman deserves to be able to defend his own life or that of his or her family, with lethal force if necessary. Anyone who "isn't allowed" to do that is not free. Such people are "subjects" in the true sense of the word. In the long run, people will lose even their self-respect when put in such a position, and I believe that that will lead to even more dysfunction, and more mental illness.

The second reason is that the police, the secret police, and the military, in any country, really have very poor historical records for kindness, probity, intelligence, and restraint -- and very sobering records of CYAing, obeying orders, and advancing their careers, even if that means politically-motivated false prosecution, assault, abuse, and murder under color of law. I certainly don't want a world in which they are the only ones with effective arms.

The plain reality is that our best option is to allow complete freedom, as far as that is possible without anarchy or collapse, and simply accept the risks that that entails.

Meanwhile, we should work to make sure that those with the best genetic endowments for character and intelligence are not outbred or outvoted by the worst. As Rï¿½pke said, "Living together in society and genuine culture is inconceivable without the authority of the competent, therefore our object must be to hinder the authority of the incompetent." We seem to be going in the opposite direction, unfortunately.

All the best,

Kevin Alfred Strom.

Hello everyone. I'm new to the forum, my screen name is one that I use on all of the lawn mower forums that I am apart of. My memory is not so good, so I try to keep my screen names the same. I recently bought an emergency crank powered radio that has the shortwave band on it, and have been enjoying listening to channels from around the world. My question for the experts here is, where on the net should I go to find out all I need to know as a complete novice to shortwave radio? Any good links would be much appreciated. Thanks in advance.

Andy

Does Sirius/XM Radio know which station each of its subscribers is listening to? I'm not looking at this as a nefarious "big brother is watching you" thing. Rather I'm wondering if they do so to measure the ratings of their programming. Considering each subscriber's radio has its own identification number it seems doing so would be relatively easy and a smart business practice. Anyone know?

Check here often. Information is posted in the form of schedules and
news concerning shortwave activities. Bob Grove at Grove Enterprises
publishes a lot of information regarding radio activities. So does
Universal Radio.

The fastest start is a web search. You'll find a great deal of
information, and you'll be able to tailor it to your interests as you go.

They're doing a memorial show to Jake Hartford this morning, 9-11am.

His on-air partner, John Kass, is having trouble getting through it.

Drew Hayes, not the warmest individual, is also pretty rattled by this.

As Jake Hartford, he had that Everyman voice, a genuineness, without the ultrasmooth polish of a professional broadcaster. He was funny, fun and relatable. And, rare in Chicago media, he had lines he wouldn't cross.

As Jim Edwards, he was a force of nature. Investigative reporter, producer for some of the most influential voices in Chicago media, and man who had is finger in nearly ever facet of Chicago life, politics, and media. And he was a good man. He had ethics. He had values.

As Jake Hartford, I wasn't a fan. I didn't dislike him. He just didn't do it for me.

As Jim Edwards, though, I learned a lot by observing his style, his determination, and his easy and fluid movements through Chicago life.

A loss, to be sure.

124. R-75 for sale (USA only)

Newsgroup: rec.radio.shortwave
Date: 2013-01-14 15:24:13 UTC
From: dave <ricketzz@earthlink.net>
Message-ID: <Ge-dncJo97yAvmnNnZ2dnUVZ_uOdnZ2d@earthlink.com>

R-75 for sale (USA only)
Fri Jan 11, 2013 2:37 pm (PST) . Posted by:
"Phil" ko6bb
This R-75 is the earlier unit that has the Sync Detector as well as the factory DSP unit. It also has the earlier "Linear" Power Supply rather than the noisy Switching PS that present units have. A previous owner cut the Power out cable from the PS and installed male/female banana plugs so they could use a 12V battery or whatever. It's well done, but I don't know why they didn't just make a new power cord. I use it on the 12 Volt station battery (3 13.6 Volt 120/Ahr deep cycle batteries in parallel).

Included are Icom 250Hz CW filters in BOTH the 9MHz & 455kHz optional filter slots (If you don't want CW filters you can always sell them or swap them for other filters you do want). Also included is the factory manual (no factory box).

In addition to the PS Mod (Banana jacks), the only additional mod I'm aware of is that the 9MHz IF has been 'tapped' to provide a 9MHz IF output for a SDR (or whatever) for Panadapter display. This was done on a small circuit board (FET follower) just prior to the 9MHz filters. If you DON'T want that output I can easily remove it, which would leave a small unused RCA jack near the antenna connector.

Everything works as it should, physical condition is very nice, though there is a blemish on the front of the tuning knob near the spinner "finger hole". Apparently the face of the knob is factory painted black over dark gray (soft paint and it wears). I replaced the memory battery this past spring so it should be good for a long time.

I'm asking $500 + $20/shipping ($520 total) US POSTAL MONEY ORDER (it will be WELL packed & sent via UPS Insured). I'll take care of any additional shipping charges. The $20 will NOT cover all shipping costs, but I'll take care of that.

The infrastructure is one-way. The radios are capable of storing such
infor, and may download it if connected to web for a firmware upgrade,
etc., but there is no two-way connection like satellite TV.

# Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
07 - 13 January 2013

Solar activity was at low to moderate levels. Low levels were
observed on 07-10 January and again on 12 January. Moderate levels
were observed on 11 and 13 January. At the beginning of the period,
there were 12 numbered regions on the visible disk. Most of the
regions were relatively stable producing low level C-class flares.
The most magnetically complex spot group was Region 1652 (N17,
L=184, class/area Fkc/320 on 07 January); a Fkc/BG spot group. By
early 08 January, Region 1654 (N08, L=151, class/area Fki/1100 on 11
January) rotated around the NE limb. Both Regions 1652 and 1654 were
responsible for the majority of the C-class activity that occurred
through the rest of the period. By 11 January, moderate levels were
reached as Region 1654 produced two M-class flares; an M1 at 11/0911
UTC with associated Type II (537 km/s) and Type IV radio bursts and
an M1/1f at 11/1507 UTC. Other activity on 11 January included a 174
sfu Tenflare associated with a C1 flare from Region 1654 at 11/1846
UTC. Low levels returned on 12 January. By 13 January, moderate
levels returned as Region 1652 produced two M-class flares; an M1 at
13/0050 UTC and another M1 at 13/0838 UTC with associated Type II
(649 km/s) and Type IV radio sweeps as well as an Earth-directed
CME. First seen in STEREO-A COR2 imagery at 13/0909 UTC (estimated
speed of 371 km/s), the ejecta appeared in SOHO/LASCO imagery as a
faint halo beginning at 13/1236 UTC.

No proton events were observed at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit was at
normal levels.

Geomagnetic field activity was quiet for the majority of the period
through late on 13 January. The solar wind speed, measured at the
ACE spacecraft, ranged from 272 km/s to 375 km/s while the Bz
component of the interplanetary magnetic field (IMF) did not vary
much beyond +/- 5 nT. By late on 10 January, the phi angle changed
```

from predominantly negative (towards) to positive (away) indicative of a solar sector boundary crossing. By mid day on 13 January, solar wind speed began to increase from approximately 400 km/s to 510 km/s. An increase in temperature and total field strength (10 nT) was observed as a positive polarity coronal hole high speed stream became geoeffective. Unsettled periods were observed from 13/1800-2400 UTC.

Forecast of Solar and Geomagnetic Activity
14 January - 09 February 2013

Solar activity is expected to be at low to moderate levels until Region 1654 rotates around the west limb on 20 January. Very low to low levels are expected until Regions 1652 and 1654 return beginning on 31 January. A chance for M-class flares exists from 31 January through the end of the forecast period.

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be at normal to moderate levels throughout the forecast period with possible high levels on 15-16 January and again on 19-20 January due to coronal hole high speed stream and CME effects.

Geomagnetic field activity is expected to be quiet to active on 14 January due to continued coronal hole high speed stream effects. Quiet levels are expected through mid-day on 17 January. By mid to late 17 January, a CME is expected to become geoeffective causing unsettled to active periods through 18 January. Conditions are expected to return to quiet levels by 19 January and continue until 09 February when a coronal hole high speed stream is expected to return.

If you are really interested in short wave, go to Universal Radio,
and check the book section. Lots of great stuff to keep you busy.
Web search is OK. Still some good info posted here; you have to
pick thru the posted crap. NASWA is a great site for info, also
have a web site, monthly mag, good club, lots of members.Also
a yearly get together. Yahoo groups is great, just about any
receiver you can name has it's own group. And, on and on...

http://www.naswa.net/

Hello LawnBoy 2nd,

You may visit a local radio amateur (HAM) club to get some ideas and
assistance with respect to antennas and other technical issues. A
descent antenna at the right location will very likely bring you lots
of new stations.

In a word, no. There is no uplink from the Sat Radio receiver to
anything. Doing so would require a transmitter, which would be
subject to a whole lot more FCC regulation and restrictions on use.

It is very analagous the VideoCipher used on Sat TV. It is strictly
one way. The received looks for authorization messages whenever it is
powered up, but has no way to acknowlege the message.

I heard the presenter mention "here in the UK". Based on that I did a
search, and could find only one station on that frequency in the UK:

BBC Essex

Essex

95.3 (South Essex), 103.5 (North Essex)

However, looking at their programme guide, I don't think it's them. Do NZ
and OZ still consider themselves part of the UK?

729, 765, 1530

Everyone 73! I'm from Hira, that in New Zealand. My English - bad. Help,
please with identification of station which I could observe on January,
14th, 2013 during time from 09.30 UTC till 10.15 UTC on frequency 1530 khz.
On air sounds songs in performance Patti Page, in particular. Identification
of radioshow and the postal electronic address on 9 minute of 39 seconds
record. In advance many thanks!
Link of record
here:http://speedy.sh/RAGtg/UNID-1530AM-LOCAL-TIME-22.30-23.15-14JAN-2013.wav

---

I heard the presenter mention "here in the UK". Based on that I did a
search, and could find only one station on that frequency in the UK:

BBC Essex

Essex

95.3 (South Essex), 103.5 (North Essex)

However, looking at their programme guide, I don't think it's them. Do NZ
and OZ still consider themselves part of the UK?

729, 765, 1530

Further research indicates that a likely possibility may be ZL2YP in Bell
Block / Taranaki / Pakipaki NZ. I can find no information on programming
nor on power output.

138. Radio Hargeisa - 7120

Newsgroup: rec.radio.shortwave
Date: 2013-01-15 03:54:13 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <50F4D2E5.DC83ADAF@milestones.com>

Got an email from a friend in northern Michigan telling me that he had just made his first QSL report this century! to Radio Hargeisa in Somaliland.

I had QSL'd them back in 2005 when they had the old lower power transmitter, but now apparently run a new 100 kW transmitter.

So I said heck, I was awake when it seems I normally sleep so I thought I'd give 'em a try on 7120 at their *0330.

Wow, what an awesome signal and cool opening anthem followed by mention of Somaliland.

Anyway, if you want to hear Somaliland, now is the time to try.

Hi Ace,

You mentioned "their 0330". I take it you mean their local time. In GMT or UTC, what time was it when you logged them?

When I put *0330, the * in front indicates 'sign on' time. And yes, in GMT.

That is when I was listening. Their signal held up well, even after 0400.

I show their local sunrise at about 0310 or so.

I did see those. One is an ethnic aboriginal station. The other seems to be
a satellite of one of the major broadcasters playing popular music. Can't
say for sure on that one though.

That's for sure! It was a different world on many levels.

I can remember when one knew the local merchants personally, and
they knew that their personal reputations meant everything to them.
Now all the decisions are made by faceless, nameless, unreachable
people in New York -- and the local employees are sad, used people
who aren't allowed to do much more than obey the latest memos and
read from a script.

With best regards,

Kevin.

Some of that is changing. The skyrocketing cost of living, high gas prices, shrinking discretionary monies, and the newly imposed costs of Obamacare (which are going to take your breath away, and most of your lifestyle in short order), have begun to press people into clustering their lives, home, work and recreation into smaller areas. Where before, persons at retail, for instance, worked at a location removed from their community, now, they have to live among their customers. With the unexpected consequence that reputation, again, is beginning to matter.

Local manglers are sending memos upstream that they cannot be anonymous, cannot be unreachable, and can't be nameless arms of corporate structure, anymore. They have to be people. They are now having to listen to their neighbors' complaints, and offer higher levels of personal service, or face tensions in the community, and at their own door.

Walmart, and JC Penney, to name two, have had long standing policies against hiring manglement from the local community. These policies are changing because they're having trouble finding people who will drive far enough away from their neighborhoods to be able to work with such anonymity. Not in all areas, of course, like big metro regions. And not in vast numbers, but it IS changing. And especially in smaller, less populous communities.

Moveover, with things getting harder and tighter on the consumer, business are recognizing that a higher level of customer service, and 'high touch' must replace corporate indifference and supplement 'high tech' in order to retain customers, who have better options.

One of the most difficult and indifferent business in my area is Jewel/Osco. Formerly a property of Royal Ahold, which had a mission statement to corner the food market, Jewel/Osco is finding it more challenging to meet target numbers, with patrons going to more user friendly stores like Piggly Wiggly and Trader Joe's. Or price friendly outlets like Walmart, Target and Aldi. Jewel stores, now under the manglement of SuperValu (a company with a commitment to 'neighborhood grocery stores), here in my neighborhood have dramatically increased their customer service commitment, and significantly dropped prices in the face of rising competition feasting on consumers tired of the

corporate pricing games, and robotic store employees who could only quote policy.

It's a small start. But it is a start. And we're seeing it in the auto industry, as well. Some large groups are selling out to local owners. With the direct and immediate result (sometimes) of better and more personal customer service.

Consider also, that the commodity MBA, is not as fashionable as it once was. Not the least for it's cost. Colleges are dropping tuition rates to attract students, and more Americans than ever are forgoing the college education entirely. Opting for a la carte classes, rather than a full curriculum. Which has the added benefit of less rigorous indoctrination potential of citizens' minds.

As I said, it's a small start. But. revolutions have begun with much, much less.

CME hit at about 1530 UTC. K index went to 5 then back to 3 by 1800
UTC. Unless there is another wave, it looks pretty weak. Might help to
reduce CRI QRM on the evening nets.

Maybe some solar rain over Norway, but none here.

SB PROP @ ARL $ARLP003
ARLP003 Propagation de K7RA

ZCZC AP03
QST de W1AW
Propagation Forecast Bulletin 3 ARLP003
>From Tad Cook, K7RA
Seattle, WA January 18, 2013
To all radio amateurs

SB PROP ARL ARLP003
ARLP003 Propagation de K7RA

Solar activity pulled back over the past week, following a stellar performance in the week prior. Average daily sunspot numbers were down 34.3 points to 129, but average daily solar flux actually rose 9.7 points to 157.4. This was because solar flux values seemed to lag behind last week's activity, raising this week's average in the first few days of the current week.

The current prediction is for solar flux at 125 on January 18-20, 120 on January 21-22, 115 on January 23-24, 130 on January 25, 135 on January 26-28, 130 and 135 on January 29-30, 140 on January 31 through February 1, 150 on February 2, 155 on February 3-4, 150 on February 5-11, then 145, 140, 135, 140 and 145 on February 12-16.

The predicted planetary A index is 10, 15 and 18 on January 18-20, 8 on January 21-22, 5 on January 23 through February 4, 8 on February 5, 5 on February 6-8, 8 on February 9-10, and 5 on February 11 through the beginning of March.

The most active geomagnetic day was January 13, but only in relation to very, very quiet recent conditions. The mid-latitude A index was 10, and the K index only reached 4 in one three-hour period. The college A index (from Fairbanks, Alaska) was 11 and 12 on January 13-14, with the K index reaching 4 in two 3-hour periods on February 13 and 5 in one 3-hour period on February 14. The reading before that K index of 5 had a K index of 0.

There is a possibility of aurora on Sunday, January 20. NOAA reports the geomagnetic field is expected to be at minor storm levels today (January 18), active levels on January 19, and minor storm levels again on January 20.

A strong solar wind on January 17 was from the waning effects of a CME (coronal mass ejection) on January 13. On January 19 solar wind

may rise again as the result of a coronal hole rotating into geo-effective position. A January 16 CME could cause a rise in geomagnetic activity on January 20. Effects should decrease into background levels by mid-day (UTC) on January 20.

The Australian Space Forecast Centre issued a warning at 2335Z on January 17 about increased geomagnetic activity January 19-20 due to a CME. For January 19 they predict quiet to unsettled conditions, but with active to minor storm periods after 1200Z. For January 20 they predict unsettled to active conditions, with minor storm levels possible.

OK1HH predicts geomagnetic activity will be quiet on January 18-19, mostly quiet on January 20-21, quiet to unsettled January 22-23, mostly quiet January 24-26, quiet January 27 through February 1, mostly quiet February 2-3, quiet to active February 4-5, quiet February 6-7, quiet to unsettled February 8-9, active to disturbed February 10-11.

Jon Utley, K7CO reports that on January 11 he was in the state of New York, and using a 5 element monoband Yagi at 100 feet he worked XV1X at 1334Z and XW4XR at 1600Z on 10 meter CW long path.

Also on January 11, Jeff Hartley, N8II in West Virginia reported, "I have operated every evening this week with poorer than expected results. Before Thursday January 10, 12 and 10 meters were closed here very shortly after sunset to all areas. A45XR was S9 on 10 meter long path Sunday morning January 6, but the band was never open well to Europe unless I rechecked it a bit late. VR2XMT was about S5-7 on 12 meter SSB long path as well Sunday. All of the higher bands still seem to close pretty early including 20 meters both west and north by 0200Z, but I expect by today things are better. On 10 meters Thursday, KH6 was heard until past 2250Z and there were west coast and South American stations on 10 until around 2230Z. I have been looking for Asia long path QSOs on 20 and 30 meters without much luck, but did manage to catch UK8OM on 30 meters short path around 0100Z."

Rick Radke, W9WS of Balsam Lake, Wisconsin wrote: "Just wanted to share an experience I had on Wednesday January 9. I was checking the bands for DX. As usual, I start on 10 and work on down to 20 to see what's open. Nothing was 'happening,' in fact there were very few signals at all. So I went to 40 just looking for a ragchew and out of nowhere there was ER4DX calling CQ with a big signal. We exchanged 59 reports and went our ways. This was 1400 local (2000Z) on a sunny afternoon in northern Wisconsin, a good three hours before grayline on this end. In almost 50 years of hamming I've never seen 5K+ miles of 40 meter propagation mid-day. Nothing special here, running 1 kW to a vertical with a bunch of radials."

That is an interesting time to work Moldova. ER4DX is Vasily Romanyuk, and just doing an internet search with his callsign yields

some clues that he operates a pretty serious big gun station. For instance, using a popular search engine to search that callsign, then hitting the Images option leads to many photos of big antennas.

W6ELprop indicates that between ER4DX and W9WS on 40 meters on that date signals may have taken a 10 dB jump from 2000-2030Z, and another 10 dB by 2230Z. I used 45.456 deg N, 92.42 deg W for Rick's location, and using the grid locator from an image of a ER4DX QSL card (KN38vk), the AMSAT tool at http://www.amsat.org/amsat/toys/gridconv.html shows 48.438 deg N, 27.792 deg E. at the other end. W6ELprop shows this is a 5,016 mile or 8,073 km path, and about 6 hours after sunset at 2030Z in Moldova. So conditions were probably favorable, and ER4DX was probably putting out a big signal, perhaps with a large 40 meter Yagi.

Using today's date (January 18) shows that first 10 dB bump moving out by 30 minutes, to happen around 2030-2100Z instead of 2000-2030Z.

Reg Beck, VE7IG of Williams Lake, British Columbia on January 12 wrote: "I had the long path openings on 10 and 12 meters for 3 days here before they petered out. I still saw W6 stations working long path after it closed for me after the 3 days. A4, A6, A9 and 7Z1 were worked on 10 meters; A4, A6, A7 were worked on 12 meters. What was very surprising to me was the immediate resurgence of 160 meter propagation right after the 10 meter long path propagation stopped. Europeans all over the band and easily worked just like during the sunspot minimum with relatively low noise levels. Pretty amazing propagation up here in the northern end of the Pacific Northwest."

Reg is way up north in British Columbia, not down near the border. Seattle is 47.7 degrees north latitude, Vancouver BC is 49.2 degrees, and VE7IG is just north of 52 degrees in Williams Lake.

Oleh Kernytskyy, KD7WPJ in Salt Lake City, Utah wrote: "Solar flux was 170 on January 12. I called CQ with 5 watts and an indoor dipole on 28.060 MHz from Salt Lake City, and immediately received a response from Fred, N3FLL in West Chester, PA. He also operated QRP - 5 watts and used a dipole. I was impressed with this contact, because the eastern direction is blocked by the Wasatch Mountains."

In another email, Oleh wrote: "We had solar flux 158 and K=2 on January 13. It produced a short opening on 28 MHz. I had a QSO with CE2AWW, using 5 watts and indoor dipole. The distance between our stations was 5707 miles."

Jon Jones, N0JK wrote with 6 meter E-skip news from Kansas: "Heard the WR7NV/b DM25 and K0YW DM69 on Es around 0130 UTC on January 14 while I was mobile near El Dorado, Kansas EM17. The Nevada beacon was in for over 30 minutes."

And finally, in last week's Propagation Forecast Bulletin ARLP002 we mistakenly put Carl, K9LA in Indianapolis. Carl is in Fort Wayne, Indiana.

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net.

For more information concerning radio propagation, see the ARRL Technical Information Service web page at http://arrl.org/propagation-of-rf-signals. For an explanation of the numbers used in this bulletin, see http://arrl.org/the-sun-the-earth-the-ionosphere. An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. Find more good information and tutorials on propagation at http://myplace.frontier.com/~k9la/.

Monthly propagation charts between four USA regions and twelve overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are at http://arrl.org/bulletins.

Sunspot numbers for January 10 through 16 were 145, 166, 156, 126, 128, 120, and 62, with a mean of 129. 10.7 cm flux was 173.9, 172.3, 168.5, 156.4, 154.1, 139.7, and 137.1, with a mean of 157.4. Estimated planetary A indices were 3, 2, 3, 9, 8, 4, and 5, with a mean of 4.9. Estimated mid-latitude A indices were 2, 3, 2, 10, 6, 4, and 3, with a mean of 4.3.

We Interrupt This Broadcast by Joe Gardner (2002, CD / Hardcover)

http://www.ebay.com/soc/itm/330859832963

"Where Were You When.?"

Few phrases garner as much attention as "We Interrupt This Broadcast." Wherever we may happen to be, our lives stop for a moment, and we experience those few seconds of anxiety between the interruption and the actual announcement of what has happened.

A great item for fans of OTR, journalism, radio buffs, and history! Having the actual broadcasts (from the networks), and reading about the background made this fascinating. It would be a good collectors item. And would be welcome addition to your book shelf (and CD collection).

Liberty Net: January 12, 2013

http://3950.net/2013/01/liberty-net-january-12-2013/

by Kevin Strom, WB4AIO

THE LIBERTY NET is one of the few nets that practice frequency agility, not only as a method of evading interference ï¿½ but also as a way to avoid causing interference. So, even though the net has been operating on 3983 and 3986 kHz in recent weeks, we might be found anywhere from about 3950 up to 3999 on any given week. Luckily, the Net Control Station, W1WCR, has a distinctly strong signal all over North America and his ï¿½call for check-insï¿½ is easily found. So what are you waiting for? Check in this Saturday night! Listen: Liberty Net 1/12

Here is a small sampling of the issues up for debate and discussion on the Liberty Net this session:

ï¿½ Isnï¿½t it interesting that so many of the gun-grabbers are packing guns themselves ï¿½ or have heavily armed bodyguards ï¿½ or are using countless deadly weapons to kill innocent people in foreign countries? (13 minutes)

ï¿½ Why are the employees of the DC regime ï¿½ and their union ï¿½ saying little or nothing about Congressï¿½s illegal seizure of their pension funds? (21 minutes)

ï¿½ Does anyone else experience cognitive dissonance when considering that the same people who want to disarm ordinary American citizens are eager to arm both Israel and the Muslim Brotherhood? (30 minutes)

ï¿½ Itï¿½s time to immediately end the blacklist that causes the firing, shaming, unemployability, and sometimes false prosecution of those who believe that the White race has a right to exist ï¿½ and who have ever dared to say so. (38 minutes)

ï¿½ Stockgumshoe.com is a site that analyzes the half-truths, teasers, hype, and promotions that are so common in the investment world. (41 minutes)

ï¿½ The bankers and their politician employees have debased the dollar so much now that the penny can no longer be made of copper ï¿½ because that much copper is worth far more than a penny ï¿½ and the copper and nickel in nickels has recently risen in value (as measured by the bankersï¿½ phony money) to considerably more than five cents. (44 minutes)

ï¿½ Just as Boy George Bush is a faux, pretended Texan, Barack Hussein Fetchit is a synthetic, pretended American. Both are creations and functionaries of the oligarchs. (1 hour 11 minutes)

ï¿½ A dollar collapse will be preceded by a huge influx of foreign-held dollars as foreigners acquire American businesses and property simply because they donï¿½t want to be the ï¿½last holderï¿½ of an asset about to lose most of its value. This influx will briefly create a flurry of positive statistics that the Usual Suspects will tell us is a ï¿½recovery.ï¿½ (1 hour 52 minutes)

The Liberty Net is on the air every Saturday night at 10PM Eastern Time somewhere above 3950 kHz SSB (lately itï¿½s been higher in frequency to avoid causing interference, often near 3983).

Remember, thanks to N2SAG and N2IRJ and W1WCR, you can listen live ï¿½ and ï¿½textï¿½ live ï¿½ via the Web whenever the Liberty Net is on the air; just check out the ï¿½Liberty Net Liveï¿½ streams in this siteï¿½s left column. And, as always, you can download the net recordings right here at http://3950.net and listen at your leisure.

This past Saturday night, The Great Liberty Nit-Wit-Net opened
with . .
Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Later in the evening, the discussion moved on to other topics like
Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Finally in the wee hours of Sunday morning, The Great Liberty Nit-
Wit- Net ended with ..
Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

As usual we thank net control for providing a completely new agenda
of
topics never before discussed on ham radio nets.

Tune in tonight when The Great Liberty Nit-Wit-Net will open with . .
Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Later in the evening, the discussion will move on to other topics
like
Blah blah blah
Clinton's a crook

Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Finally in the wee hours of Sunday morning, The Great Liberty Nit-
Wit- Net will end with ..
Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

So stock up with your favorite refreshments and join us.

Presidential Inauguration 2013

A Guide to Inauguration Day Events in Washington, DC

By Rachel Cooper, About.com Guide

The Presidential Inauguration will be held in Washington DC on Monday, January 21, 2013. A week of festivities will include the Presidential Swearing-in Ceremony, Inaugural Address, Inaugural Parade and numerous inaugural balls and galas honoring the elected President of the United States. The official theme for the 2013 inauguration is "Faith in America's Future," commemorating the United States' perseverance and unity, marking the 150th anniversary of the Emancipation Proclamation and the placement of the Statue of Freedom atop the Capitol Dome in 1863.

An estimated 1.8 million people attended the 2009 Presidential Inauguration of Barack Obama, a record breaking number for any event in the nation's capital. Read about the 2009 Inauguration and see photos of the event.

To share your photos, send an email to dc@aboutguide.com. See Photos of the 2013 Inaugural Events

Overview of the 2013 Inauguration Schedule

* Saturday, January 19 - National Day of Service.
Americans across the country will participate in service projects in their communities to celebrate the legacy of Dr. Martin Luther King, Jr. A Service Summit will be held on the National Mall from 9:30 a.m. to 5 p.m. See details about the programming.
Special events and commemorative activities will also be held around the region. See a guide to Martin Luther King Day Events.

Kids' Inaugural Concert - 6 p.m.
Washington Convention Center. First Lady Michelle Obama and Dr. Jill Biden will host the concert as part of their ongoing commitment to military families. The event is by invitation only.

* Sunday, January 20 - The President will participate in a small private swearing-in ceremony.

* Monday, January 21 ☐ Inauguration Day.
Swearing-in Ceremony, Inaugural Parade, and official Inaugural Balls.
(See details below)

* Tuesday, January 22 - Inaugural National Prayer
Service, 10:30 a.m. Washington National Cathedral. President
Barack Obama and Vice President Joe Biden, along with dignitaries and
Americans of diverse faiths will attend the service which will include
prayer, readings and musical performances. The event is by invitation
only and will be webcast live at www.nationalcathedral.org.

Getting to the Events: The 2013 inaugural events
are expected to draw large crowds to Washington, DC. Getting around the
region throughout the four-day weekend will be challenging. See
Inauguration 2013 Transportation Guide
for details.

Inauguration Swearing-in Ceremony

January 21, 2013, 11:30 a.m. - The oath of office will
be administered on the steps of the U.S. Capitol in Washington, DC. Following
the oath of office, the President will give his inaugural address,
setting out his vision for America and goals for the nation. See details about the program.

TICKETS: Each Senator and Representative receives a limited
quantity of free tickets that they may distribute to the public at their
discretion. The public should be aware that no website or other ticket
outlet actually has inaugural swearing-in tickets to sell, regardless of
what they may claim.

Tickets are not required to watch the
swearing-in ceremony on large screens that will be set up along the
National Mall. For general information about the area, see A
Visitors Guide to the National Mall.

Presidential Inauguration Parade

January 21, 2013, 2:30 p.m. Tickets are not
required.

Location: Pennsylvania Avenue, NW Washington, DC.
Viewing stands and bleachers will extend from 3rd to 17th
Sts.

The presidential inaugural parade includes members from all
branches of the armed forces of the United States. Since 1789, the U.S.
armed forces have participated in this important American tradition
honoring our commander in chief. During the 10-day inaugural period from
January 15 to January 24, 2013, armed forces personnel will provide
ceremonial support with musical units, marching bands, color guards,
salute batteries and honor cordons. Read more about the inaugural parade.

Inauguration Balls

Many inaugural balls and galas will take place at venues throughout Washington, DC in January 2013. The official balls are planned by the Presidential Inaugural Committee and unofficial balls and parties are planned by the State Societies of Washington, DC and a variety of other organizations. See a guide to Inaugural Balls and Galas.

Inauguration Travel Information and Tips

* The best way to get to the inaugural events from around the region will be by Metro. However, it will be very crowded and there are likely to be long lines and delays. Arrive early and be patient. You should purchase your Metro fare in advance to save time. Read A Guide to Using Washington Metrorail for more details.

* All parade and event attendees will be subject to a thorough security screening. Allow for additional time and be aware of prohibited items. Read more about Inauguration Security.

* Dress for the weather! January in Washington, DC can be very cold. Temperatures are expected to be in the low 30s. Be sure to wear layers, a hat, scarf and gloves. DC weather is variable so be prepared for a cold and damp day. Umbrellas will not be allowed due to security concerns.

* Following the inaugural parade, plan to stay in the city and visit a museum or go to a movie. Let the crowd thin out before taking public transportation out of town. For more information about getting to the events, See Inauguration 2013 Transportation Guide.

Sightseeing Suggestions

Inauguration Themed Exhibits - A few museums in Washington DC offer special exhibits that highlight the election and the history of presidential inaugurations.

Top 10 Things to Do in the Washington DC Area - Learn about the "must see" attractions of the nation's capital.

Washington DC Attractions that Require Advance Planning - The city's most popular attractions will be very busy this week. Be sure to find out how to make the most of your visit to the nation's capital.

Visit the National Monuments and Memorials - Washington, DC's memorials are special tributes and wonderful attractions.

Best Sightseeing Tours - Take a guided tour and learn about the history of the city and its national landmarks. Reserve a tour in advance to be sure to get your desired time.

Explore Washington, DC Neighborhoods - Get off the National Mall, get

away from the crowds and experience Washington, DC's eclectic neighborhoods.

Washington, DC Hotels

This will be a very busy week in Washington, especially since the inauguration falls on the weekend of Martin Luther King, Jr.'s Birthday. Book your hotel early to confirm a reservation. Here are some resources to help you find a room to suit your needs.

* Downtown Washington, DC Hotels

* Capitol Hill Hotels

* Georgetown Hotels

* Dupont Circle Hotels

* Northern Virginia Hotels

* Maryland Hotels

* Best Luxury Hotels in Washington, DC

Highlights of Solar and Geomagnetic Activity
14 - 20 January 2013

Solar activity was predominantly at low levels with very low levels
observed on 17 January. The largest flares of the period were a
C6/Sf flare at 14/0122 UTC from Region 1652 (N17, L=184, class/area
Fkc/320 on 07 January) and a C5/Sf flare at 18/1707 UTC from Region
1654 (N08, L=151, class/area Fki/1100 on 11 January). The C5 flare
had an associated Type II radio sweep (1695 km/s). On 16 January, a
long duration C2 flare was observed from Region 1650 (S30, L=193,
class/area Eho/250 on 07 January) which had decayed to plage by the
time of the event. A partial halo, coronal mass ejection (CME), with
the majority of the ejecta off the SW limb, was first seen in
SOHO/LASCO C2 imagery at 16/1900 UTC (estimated plane-of-sky speed
of 728 km/s). This event was likely associated with a filament
eruption near Region 1650.

A greater than 10 MeV proton enhancement was observed at
geosynchronous orbit beginning late on 16 January, peaked at 2 pfu
at 17/1415 UTC, and declined to background levels by approximately
18/0600 UTC.

The greater than 2 MeV electron flux at geosynchronous orbit was at
moderate levels on 14-16 January and again on 19-20 January. High
levels were observed on 17-18 January in response to a shock arrival
from the 13 January CME.

Geomagnetic field activity ranged from quiet to active levels. The
period began under the influence of a positive polarity coronal hole
high speed stream (CH HSS). Solar wind speeds increased from
approximately 480 km/s to 590 km/s early on 14 January, but started
to decrease by late on 14 January. The geomagnetic field responded
with quiet to unsettled levels with an isolated minor storm period
observed at high latitudes. As solar wind speeds continued to
decrease to around 400 km/s by early on 16 January, mostly quiet
conditions were observed. By 17 January, total field values (Bt)
```

increased to 16 nT while the Bz component of the interplanetary magnetic field switched from maximum values of approximately +10 nT to -14 nT indicative of the arrival of 13 January CME. The geomagnetic field responded with quiet to active levels with periods of active to minor storm levels at high latitudes. By mid-day on 18 January, total field had decreased to around 7 nT as the CME effects waned. By 19 January, a small shock was observed in ACE data at approximately 19/1647 UTC. A corresponding sudden impulse was observed in the Boulder magnetometer (21 nT) at 19/1733 UTC. The shock arrival was consistent with the arrival of a glancing blow from the 16 January CME. Only quiet to unsettled conditions were observed from 18-20 January with periods of minor storming on 20 January at high latitudes.

Forecast of Solar and Geomagnetic Activity
21 January - 16 February 2013

Solar activity is expected to be at very low to low levels until 30 January. A chance for M-class flares exists from 31 January through 15 February when Regions 1652 and 1654 return to the visible disk. By 16 February, very low to low levels are expected.

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be at normal to moderate levels through 23 January. A chance for an increase to high levels on 24-25 January is expected due to CH HSS activity. A return to low normal levels is expected from 26 January through 09 February. Moderate to high levels are expected from 10-12 February due to activity from another CH HSS. Normal levels are expected again by 13 February through the end of the forecast period.

Geomagnetic field activity is expected to be mostly quiet through the forecast period with unsettled periods expected on 23 January and 9-10 February due to CH HSS effects.

We have been informed by the readers of rec.radio.shortwave that a |
recent (2008) attempt to update these documents and post them (or links |
to them) at regular intervals, has since been abandoned, so the project |
is once again open to a sincere and motivated volunteer. |

We are interested in offering any technical support necessary to get
these articles updated and automatically posted again at regular
intervals. This would include establishing contact with the original
maintainers for any necessary permissions. We would prefer to seek new,
dedicated maintainers at this time, rather than start auto-posting the
original articles ourselves.

For more information about our newsgroup, see:

ARLP004 Propagation de K7RA

ZCZC AP04
QST de W1AW
Propagation Forecast Bulletin 4 ARLP004
>From Tad Cook, K7RA
Seattle, WA January 25, 2013
To all radio amateurs

SB PROP ARL ARLP004
ARLP004 Propagation de K7RA

Average daily sunspot numbers over the past week were less than half the value for the previous week, dropping nearly 73 points to 56.4. Average daily solar flux declined as well, nearly 47 points to 110.7. Average geomagnetic indices were up about 50%, but still very quiet. The higher average was due to events on January 17, when the planetary A index was 13, higher than recent measures, but still moderate. The cause of the mild disturbance was the arrival of a CME, or Coronal Mass Ejection.

Predicted solar flux from the January 24 forecast from NOAA and USAF has 10.7 cm flux values at 100 on January 25-26, 95 on January 27-30, 100 on January 31 through February 1, 110 on February 2, 120 on February 3-4, 125 on February 5-8, 120 on February 9-14, 115 and 110 on February 15-16, and 105 on February 17-18.

It doesn't look like a return to solar flux values around 170 (where it was on January 9-12) is expected any time soon. But those high levels earlier in the month weren't predicted either.

Looking back, a flux reading of 135 was predicted for January 9 in the November 25 through December 9 daily forecasts, then downgraded to 110 on December 10-16, then increased to 115 on December 17-30, downgraded to 105 on December 31 through January 2, increased to 115 on January 3, 135 on January 4, 130 on January 5-6, 145 on January 7, and 150 on January 8. The final result? 169.3 on January 9, far above any predictions over the previous 45 days, which were revised eight times.

The forecasts are issued daily, usually after 2100 UTC and posted at http://www.swpc.noaa.gov/ftpmenu/forecasts/45DF.html.

The predicted planetary A index from the same January 24 forecast is 8, 15, 20 and 12 on January 25-28, 5 on January 29 through February

8, 8 on February 9-10, 5 on February 11-18 and 8 on February 19. The January 25-28 levels are higher then predicted a day earlier, on January 23. In that earlier forecast, planetary A index for those same four days was 8, 8, 5 and 5.

F.K. Janda, OK1HH of the Czech Republic expects the geomagnetic field will be quiet to unsettled on January 25-26, quiet January 27-28, mostly quiet January 29, quiet on January 30-31, mostly quiet February 1-2, quiet on February 3, mostly quiet February 4, quiet on February 5-6, quiet to unsettled February 7-8, quiet to active February 9-10, mostly quiet February 11-12, quiet to active February 13-14, active to disturbed on February 15, and quiet to unsettled February 16.

Jeff Hartley, N8II of Shepherdstown, West Virginia wrote, "It has been a pretty boring winter for DX. I did work four VK3s in a row from 2225-2255Z including one mobile who was S6 and a QRP 5 W to 1/2 wave vertical who was S5 with QSB on 20M SSB long path Thursday (January 24), so that path was very good. 12 and 10 seemed dead at that time and only South America was heard on 15. No European signals were heard on 160 around then and again at 0050Z (nothing on 80 also at 0050Z). But, if the K stays low, the lower flux should help the CQWW 160 contest this weekend."

Unfortunately, the forecast for this weekend has some geomagnetic activity, with the planetary A index on February 25-27 at 8, 15 and 20.

The 160 meter contest Jeff referred to is the CW weekend of the CQ World Wide 160-Meter Contest. The contest page at http://www.cq160.com/) says it runs from 2200 GMT today (Friday, January 25) to 2200 GMT Sunday. By the way, 2200 GMT (Greenwich Mean Time) for our purposes is the same as 2200Z or 2200 UTC. On the West Coast, this is long before sunset, at 2:00 PM PST.

On January 19, Jeff wrote: "Friday morning January 18 I had a chance to operate and had some very strong signals on 10 phone from the UK with small stations mostly S7-9. Even 5 and 10 watt stations were good copy. This was starting about 1330Z and the EU opening ended after 1600Z. Countries worked in EU started with SP, DL, EI, G, GM then later PA, ON, F and the DLs were about the only ones left at 1610Z. Friday evening was noticeably better than all this past week, but did not get to the radio until 0040Z. At that time 15 was in good shape to JA with the loudest, JH1GEX S9. BW2AK was heard and 9V1YC who was about S3-4 was worked easily thru a pile up. 15 was still open to JA at 0115Z, normally by 24Z, 15 seems closed to everywhere. 17 was also quite good into JA around 0100-0130Z with JA9YYY S9 on SSB.

The HA DX contest started at 12Z Saturday with lots of EU and Russian activity. Russians are usually only easy to work very early in the day on 20 and about nil on 15 and higher. At 1315Z when I

started thru 1430Z, Russians had good signals on 20 CW but there was deep rapid QSB making copying dits and sometimes whole letters/numbers very difficult. I worked about three Ural mountain area UA9s and found UN2E about S3 plus quite a few from UA3, about four from UA4 and some loud ones near St Petersburg from UA1. The deep QSB was even a problem on signals as close as Germany as well as the Hungarians. YE1ZAT called in around 1545Z with a good signal. 15 was open pretty well to EU, but 10 was barely open at all to very southern EU, I heard T77BL working AA3B.

"In the afternoon, I briefly operated in the NAQP phone contest before heading off to work. At 1835-1900Z, 10M had a good number of loud signals with one VE6 hitting 30 dB over S9. Many UT stations were worked along with stations from CO, AZ, WA, ID, MT and NM; only W6TA and K6LA who was weak were worked in CA. 15 was wide open to TX and was a bit of a struggle to work west coast stations with Midwest stations beating me out consistently."

In a January 18 email titled "Outstanding 160M propagation Jan 11-12 in Ohio," Robert Elek, W3HKK of Johnstown, Ohio wrote: "Worked more Europeans than ever around their sunrise on Jan 11 and 12, plus KL7 and VP2 earlier in the night. Huge signals! Received my first 599 reports from Europe (two of them!) as well as two SWL cards from Russia for that activity. The rig: 100w to quarter wave 40 ft vertical inverted L with 22x65 ft radials.)

"I was excited for the weekend conditions but Jan 13-14-15 turned out to be stinko for DX. Amazing how things change on Top Band. Gotta get 'em while you can."

Thanks, Robert.

Don't miss "The Penticton Solar Flux Receiver," an article on pages 39-46 in the February 2013 issue of QST. This gives a great explanation about where the solar flux numbers in our bulletin originate. It answered questions I had about the process, such as how they handle readings that go off the scale during a space weather event.

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net.

For more information concerning radio propagation, see the ARRL Technical Information Service web page at http://arrl.org/propagation-of-rf-signals. For an explanation of the numbers used in this bulletin, see http://arrl.org/the-sun-the-earth-the-ionosphere. An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. Find more good information and tutorials on propagation at http://myplace.frontier.com/~k9la/.

Monthly propagation charts between four USA regions and twelve overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are at http://arrl.org/bulletins.

Sunspot numbers for January 17 through 23 were 74, 56, 46, 48, 50, 53, and 68, with a mean of 56.4. 10.7 cm flux was 122.7, 115.2, 106.7, 106.6, 108.3, 110.3, and 104.9, with a mean of 110.7. Estimated planetary A indices were 13, 9, 7, 9, 4, 1, and 1, with a mean of 6.3. Estimated mid-latitude A indices were 12, 7, 9, 8, 4, 1, and 1, with a mean of 6.

This past Saturday night, The Great Liberty Nit-Wit-Net opened
with . .

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Later in the evening, the discussion moved on to other topics like ...

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Finally in the wee hours of Sunday morning,
The Great Liberty Nit- Wit- Net ended with ..

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

As usual we thank net control for providing a completely new agenda of
topics never before discussed on ham radio nets.

Liberty Net: January 19, 2013

http://3950.net/2013/01/liberty-net-january-19-2013/

WHILE MUCH OF North America is buried in a thick mantle of white snow, radio conditions have been as good as travel conditions have been bad. So warm up your radio shack with a crackling pine log and your rigï¿½s glowing tungsten filaments, and travel via the magic of the Kennelly-Heaviside Layer ï¿½ and share ideas with the new friends youï¿½ll find on amateur radioï¿½s Liberty Net.

Here are a few small examples of the ideas discussed on the Liberty Net this week:

ï¿½ If the alleged lawmakers in Washington and in statehouses throughout the land fail to read and heed the Constitutionï¿½s absolute prohibition of even the slightest infringement of the peopleï¿½s right to defend themselves with arms ï¿½ even from the police or ï¿½US governmentï¿½ troops if necessary ï¿½ someday they may find themselves arrested and charged by an aroused citizenry. (16 minutes)

ï¿½ If anyone needs to be disarmed, it should be those who operate ï¿½ and those who order the operation of ï¿½ the lethal drones that are being used by the Washington regime to kill innocent children even as we speak. (19 minutes)

ï¿½ The Founders wanted a society favored by the leadership and knowledge and kindness and talents of what they called ï¿½natural aristocratsï¿½ ï¿½ meaning not necessarily those with artificial titles, but those with natural, inborn talent and virtue. What they did not mean is what we have now: rule by lowlife thugs and criminals. (1 hour 23 minutes)

ï¿½ When we notice Fetchitï¿½s Lincoln obsession and his desire to be remembered as a ï¿½great figureï¿½ in the history books, we should always remember that contemporary history books are written by the victors, and invariably make mass-murdering monsters into official ï¿½heroes.ï¿½ (1 hour 27 minutes)

ï¿½ The ï¿½Gun Free Zonesï¿½ that our enemies have created should really be called ï¿½Crime Opportunity Zones,ï¿½ or, better yet, ï¿½Killing Zonesï¿½ ï¿½ since the bad guys (including operatives of the tyrantsï¿½ Washington regime) know that we will be defenseless in such places. (1 hour 50 minutes)

ï¿½ Violent crime in America does not correlate with gun availability at all ï¿½ but it does correlate very closely with the number of

non-Whites in a given area, as statistics clearly show. See http://nationalvanguard.org/2010/10/racial-violence-in-america/ (1 hour 54 minutes)

ï¿½ Why is the daily violence in Chicago and our other major cities not a major, ongoing news story? Could it be because the pervasive ï¿½gun controlï¿½ there, and the ethnic dimension to the violence, simply donï¿½t fit the anti-White agenda being pushed by the billionaire oligarchs? (2 hours 14 minutes)

ï¿½ Despite being almost entirely a creation of the Tea Party movement, Marco Rubio has betrayed his supporters and sold out to the oligarchs (and their Chamber of Commerce allies) and supported the acceleration and legalization the Mestizo invasion of the United States. Itï¿½s also sad to see a man who is as White as Ward Cleaver pretend to be a ï¿½minorityï¿½ to gain political advantage in our sick society. (2 hours 22 minutes)

Thanks to N2SAG and N2IRJ and W1WCR, you can listen to the Liberty Net every week ï¿½ somewhere near 3950 kHz, plus or minus the interference (lately, substantially above that frequency, and often near 3983) ï¿½ every Saturday night at 10PM Eastern Time, and also via the Internet. You can also download the Liberty Net right here at http://3950.net and listen in your car, at work, or wherever you like. Check in on the air and join the excitement!

Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
21 - 27 January 2013

Solar activity has been at very low levels for the past week. At the beginning of the summary period, Region 1654 (N08, L=151 Class/Area Fki/1100 on 11 Jan) rotated off the west limb without producing any major activity. Region 1660 (N13, L=065 Class/area Dao/220 on 25 Jan) was the only other region of magnetic complexity on the visible disk. However, very little activity was attributed to Region 1660. The remaining regions on the disk remained stable and quiet. A couple of non-Earth directed CMEs were observed during the period. On 23 January, a large filament eruption was observed off the northeast quadrant of the visible disk. LASCO C2/C3 and STEREO A/B COR2 imagery supported an associated CME with this event. SWPC forecaster analysis and WSA-Enlil models runs indicated this event was Earth directed, however very little affects would be observed upon arrival.

No proton events were observed at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit was normal to moderate levels during the summary period.

Geomagnetic field activity was at mostly quiet levels from 21 -25 January. On 26 January, solar wind measurements from the ACE spacecraft indicated the arrival of a coronal hole high speed stream (CH HSS), preceded by a co-rotating interaction region (CIR). The ACE measurements showed and small increase in solar wind density, followed by an increase in solar wind speed, accompanied by an enhancement in the total interplanetary magnetic field. In response to these changes, quiet to active levels were observed. As effects from the CH HSS waned, a return to quiet levels was observed on 27 January. An instrument on the ACE spacecraft called the EPAM, used to monitor energetic protons and electrons in the solar wind, indicated the possible arrival of the 23 January CME late on 26 January. Due to the arrival of the CH HSS, it was hard to discern

which effects can be attributed to the CH HSS and which can be attributed to the CME.

Forecast of Solar and Geomagnetic Activity
28 January - 23 February 2013

Solar activity is expected to be very low levels with the possibility of C-class events for the entire forecast period. Even though several of the returning regions show magnetic complexity, very little data has indicated increases in activity while these regions rotate around the far side of the disk.

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be normal to high levels on 28-30 January and 11-12 February in response to CH HSS effects. Normal to moderate levels are expected for the remainder of the period.

Geomagnetic field activity is expected to be at mostly quiet levels for the entire forecast period, except for 09-10 February and 22-23 February. Quiet to active levels are expected on these days in response to CH HSS effects.

A good friend of mine is good friends with Art Bell. I'll see what's up.

Taliafero got kind of strident towards the end. John Rothman was OK. Pat Thurston, Karel, and Christine Kraft are all that's left now.

I'm a chatty friend with Art Bell in Facebook,
I will keep you updated.

For now Art Bell is negotiating a possible return with various people.

And our network is here...

He's living in the crawl space under your house. He went down there
trying to find Cuhulin, but got stuck.

Hehe, y'all ought to see the crawl space under my house. I have more old junk and scrap metal in there than you can shake a stick at. Looka here ilk, I have a water hose down there that I use for siphoning the rain water out of there . Tell Art Bell he ought to be carefull if he goes under there.

I don't turn my radio on at night when I have to get up and go to my bathroom to wee wee, might be something on there that would upset my beauty sleep. I guess I like Art Bell A Okay. I am fixin to phone the local Harbor Freight store about seven miles East behind doggy's couch and see if they have those little digital inspection cameras in stock, $69.99 with the coupon in my snail mail Popular Science magazine. I want to buy me a new toy.

He owns a station. I don't know who owns "Coast to Coast" but Premiere
(Bain Capital, et al), produces and distributes it. The show lost a
bunch of affiliates when Cumulus took over ABC O&Os from Citadel. The
show that replaced it is very vitriolic and sarcastic, not compatible
with sleep learning.

Man, I have so many Art Bell Radio MP3 archives, and I love listening
to them at night before sleep, and I sleep often while my MP3 player
is playing them.

It's just awesome.

I have never seen any space aliens or space ships in all of my 71 years and almost three months on this Earth. Therefore, I remain Extremely Skeptical.

> Why can't you send the doggy to investigate who is hiding in the crawl space?

Doggy has sense enough to stay out from under there. Cats used to get under there and do their love making, untill I boarded up that opening last year. It used to drive doggy crazy, those damn cats.

247. Breaking: Huge explosion in Mexico City oil office high rise building.

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast
bands used outside the USA. For multi-use bands, primary usage is shown.
Some stations operate outside official bands. Information is from Oct 2008
FCC rules and Sep 2009 NTIA manual, see Chapter 4 of:
http://www.ntia.doc.gov/osmhome/redbook/redbook.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is
5 kHz. Frequencies above 10000 kHz tend to propagate better during the day;
frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area.
Telephone lines present a potential shock hazard. Do not use this antenna
for transmitting. Use at your own risk.

INTRODUCTION

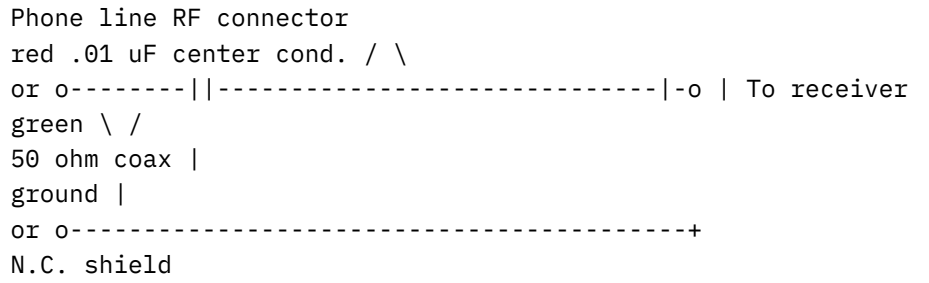
This article describes how to use a phone line as a shortwave receiving
antenna. Performance will vary depending on the kind of phone line you
have. Overhead lines usually make okay antennas, while underground lines
| usually don't. Phone lines carrying DSL service may be unsuitable because
| DSL operates over a wide spectrum. A phone line antenna will generally
pick up more power line noise than a dedicated antenna, so don't expect to
| use it for DX work. Nevertheless, I found that it outperformed the
| telescopic whip antennas built into many portables.

A reader sent in this suggestion: If you're concerned about connecting
the phone line directly to the receiver, try wrapping the phone cord
several times around the receiver's telescopic whip antenna instead.
Performance may not be as good as a direct connection, but it will
probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought
much about it because thunderstorms are rare in my area. Most phone lines
have lightning arrestors on them where they enter the house, but the
lightning arrestors may pass enough energy during a lightning strike
damage a receiver. My suggestion is to disconnect the antenna when not in
use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and
receiver. The capacitor eliminates all phone line voltages, including
| ringing, so that they will not harm the receiver. The capacitor should
| be rated 250 volts or higher.



N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

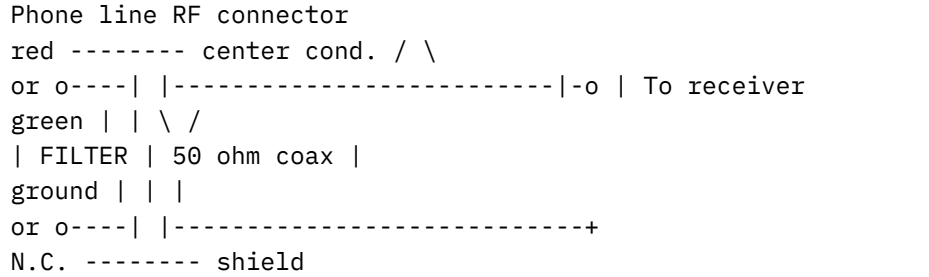
If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be
| purchased from shortwave dealers (see below for recommendations).

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

These filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:



| RECOMMENDED FILTERS
|
| If you don't want to make your own filters, the following have good
| performance, are well-built and affordable:
|
| Model 400 BCB interference filter (3.5 MHz highpass)
| http://www.iceradioproducts.com/filtersrf.html#bcb
|

| Model 420 HF lowpass filter (30 MHz lowpass)
| http://www.iceradioproducts.com/filtersrf.html#3
| (scroll down a bit to see the model 420)
|
| If you have a random-wire antenna, the following unit will provide
| impedance matching and lightning protection (connect antenna to 450-ohm
| terminal):
|
| Model 182A beverage matching unit
| http://www.iceradioproducts.com/reconly.html#Beverage Matching

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

From: paulb@harley.TTI.COM (Paul Blumstein)
Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.

```
--------||---+----||-----+----||-----------
} }
{ {
} }
-------------+-----------+-----------------
```

The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB

1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

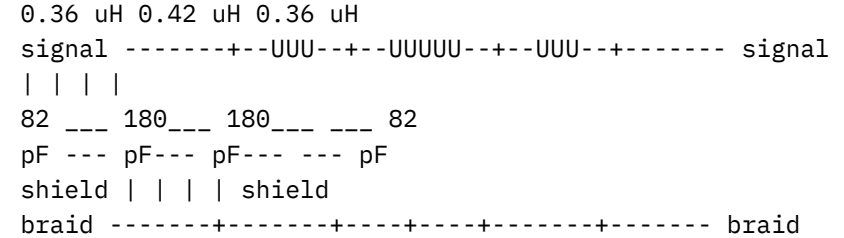
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



|
chassis ground

I had to do a little more improvising at this point. I used .33 uH
instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there
are 4 lugs plus a grounded lug. All "ground" connections go to the lug
that is mounted to the chassis, and the other 4 lugs are used for each
of the connections on the signal line. One terminal strip is used per
filter. Since both filters were necessary to clean up the hash, I am
going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means
you can't possibly hook them up backwards. (In the above schematics,
left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

Parts for the filters can be obtained from the following source:
http://www.digi-key.com/

U.S. Constitution
Article III
Section 1.
The judicial power of the United States, shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish. The judges, both of the supreme and inferior courts, shall hold their offices during good behaviour, and shall, at stated times, receive for their services, a compensation, which shall not be diminished during their continuance in office.

Section 2.
The judicial power shall extend to all cases, in law and equity, arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority;--to all cases affecting ambassadors, other public ministers and consuls;--to all cases of admiralty and maritime jurisdiction;--to controversies to which the United States shall be a party;--to controversies between two or more states;--between a state and citizens of another state;--between citizens of different states;--between citizens of the same state claiming lands under grants of different states, and between a state, or the citizens thereof, and foreign states, citizens or subjects.

In all cases affecting ambassadors, other public ministers and consuls, and those in which a state shall be party, the Supreme Court shall have original jurisdiction. In all the other cases before mentioned, the Supreme Court shall have appellate jurisdiction, both as to law and fact, with such exceptions, and under such regulations as the Congress shall make.

The trial of all crimes, except in cases of impeachment, shall be by jury; and such trial shall be held in the state where the said crimes shall have been committed; but when not committed within any state, the trial shall be at such place or places as the Congress may by law have directed.

Section 3.
Treason against the United States, shall consist only in levying war against them, or in adhering to their enemies, giving them aid and

comfort. No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.

The Congress shall have power to declare the punishment of treason, but no attainder of treason shall work corruption of blood, or forfeiture except during the life of the person attainted.

>From Tad Cook, K7RA
Seattle, WA February 1, 2013
To all radio amateurs

SB PROP ARL ARLP005
ARLP005 Propagation de K7RA

Sunspot numbers and solar flux barely changed in the past week. Average daily sunspot numbers were 55.7, down slightly from 56.4 the previous week, and average daily solar flux was 98.7, down from 110.7. Geomagnetic conditions continued their quiet spell.

The most active day was Saturday, January 26, when both the mid-latitude and planetary A index was 18, and Alaska's college A index was 46.

The predicted solar flux is 100 for February 1, 105 on February 2-5, 110 on February 6-7, 120 and 125 on February 8-9, 120 on February 10-11, then 115, 110 and 105 on February 12-14, 110 on February 15-18, 105 on February 19-23, 95 on February 24-25, 110 on February 26, and 125 on February 27 through March 1. Flux values peak again at 140 on March 3-4.

The predicted planetary A index is 5 on February 1, then 12, 18, 15 and 8 on February 2-5, 5 on February 6-8, 8 on February 9-10, 5 on February 11-18, 8 on February 19, 5 on February 20-21, then 15, 10 and 8 on February 22-24, 5 on February 25 through March 7, and 8 on March 8-9.

OK1HH believes we will see quiet conditions on February 1-3, quiet to unsettled February 4, mostly quiet February 5, quiet to active February 6, mostly quiet February 7, quiet to unsettled February 8, quiet to active February 9-10, quiet to unsettled February 11, mostly quiet February 12, quiet to active February 13-14, active to disturbed February 15, quiet to unsettled February 16, quiet on February 17-21, active to disturbed February 22, quiet to unsettled February 23 and quiet February 24.

Regular readers know we've been tracking a three-month moving average of sunspot numbers for several years now. The average daily

sunspot number for the three calendar months ending January 31 was 82.8, better than last month, but nothing like the numbers we saw over a year ago in fall 2011.

The three-month averages for the past year, the months ending in February 2012 through January 2013 were 83.3, 73.7, 71.2, 87.3, 91.5, 96.5, 91.9, 89.9, 81.2, 82.3, 74.4 and 82.8.

The one month average sunspot number for January was 98.9, the highest monthly average since May and July of last year.

Not much news in reports from readers this week, but N8II of West Virginia reported last Friday, January 25, "Today was pretty decent considering the now double digit SFI and K of 2. I worked RC4HAA on 15 meter CW who was S6-9, and 12 meters opened well to Europe from 1400-1440Z. I got in on the tail end of it with QSOs with SV3, HB9, OM0 and G4.

"Last night at 0200Z I caught T6LG in Afghanistan on 80 CW for a new band/country. He was about S3-S6 and not hearing the USA stations calling him that well (about 10 callers when I was there)."

Glenn Axelrod, N6INM/9 in Mundelein, Illinois wrote: "Are SFI and conditions going to improve by the Spring/Summer? Are we ever going to see numbers again like in '58 in my lifetime? I am 48 years old."

By SFI, Glenn means solar flux index. We have no way of knowing when this cycle will peak, or even if it may have already peaked, but peaks of solar cycles become easier to predict later in the first part (the upswing) of any cycle.

Until recently experts predicted this cycle would probably peak in Spring of 2013, which begins in less than seven weeks. But later predictions moved it out to Fall of 2013, with slightly lower numbers. We had a period of higher solar activity in November and December of 2011, which led some to believe that perhaps the cycle had peaked early. Others believe we may see a double-peak in this cycle, as we have in some earlier solar cycles.

But we should see seasonal improvements in HF conditions in the Spring and again in the Fall. By seasonal, I mean that even if we saw no change in solar activity, just due to the season and position of the Sun relative to us, we see better conditions on the higher frequencies in Spring and Fall than we tend to see in Summer and Winter.

In September through December 2011 the monthly averages of daily sunspot numbers were 106.4, 123.6, 133.1 and 106.4. The previous four months (May through August) saw averages of 61.5, 55.5, 67.2 and 66, so the final third of 2011 showed a dramatic jump in activity. But the next year the numbers dropped back again. The average daily sunspot number for all of 2012 was 82.3. The average for all of 2011 was only 29.9, so that jump at the end of the year

was exciting, and convinced many of us that the cycle was starting to really ramp up. The January 2013 average was a little less than 100.

There is a hypothesis which posits that we may see a grand minimum, decades of depressed sunspot numbers, but of course that cannot be proven by observation in the next decade or two. I hope it isn't true. I hope we see future activity which is strong and surprises everyone, but I wouldn't count on it. I was licensed during the low point between Cycle 19 (the biggest in history) and Cycle 20, and along with many others have been wishing for decades to see another like Cycle 19. But Cycle 19 turned out to be a rarity. But just like Cycle 19 surprised many people, I hope we can be surprised again.

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net.

God you're fun.

The Federal Convention convened in the State House (Independence Hall) in Philadelphia on May 14, 1787, to revise the Articles of Confederation. Because the delegations from only two states were at first present, the members adjourned from day to day until a quorum of seven states was obtained on May 25. Through discussion and debate it became clear by mid-June that, rather than amend the existing Articles, the Convention would draft an entirely new frame of government. All through the summer, in closed sessions, the delegates debated, and redrafted the articles of the new Constitution. Among the chief points at issue were how much power to allow the central government, how many representatives in Congress to allow each state, and how these representatives should be elected--directly by the people or by the state legislators. The work of many minds, the Constitution stands as a model of cooperative statesmanship and the art of compromise.

with . .

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Later in the evening, the discussion moved on to other topics
like ...

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Finally in the wee hours of Sunday morning, The Great Liberty Nit-
Wit- Net ended with ..

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

As usual we thank net control for providing a completely new agenda of
topics never before discussed on ham radio nets.

261. Latest Liberty Net via WB4AIO

Newsgroup: rec.radio.shortwave
Date: 2013-02-02 15:53:36 UTC

Liberty Net: January 26, 2013

http://3950.net/2013/02/liberty-net-january-26-2013/

by Kevin Strom, WB4AIO

THE LIBERTY NET, now in its 39th year, is the longest-running current events discussion net ever to exist in the Amateur Radio Service. Freely sharing information and ideas that the billionairesï¿½ media censor or distort is the very essence of serving the public interest.

While our main focus is over-the-air communications, we also offer downloads and live feeds via the Internet, including a brand new Ustream feed via Liberty Net ï¿½tall shipï¿½ station N2SAG. (Stickam, where the N2SAG feed used to reside, has shut down.)

Here are a few samples of the events and ideas debated on the Liberty Net this week:

ï¿½ Many are angry about the recent decision to put women into front-line US combat roles. But consider carefully: Since the Washington regime is the enemy of the American people and of freedom-loving people everywhere, shouldnï¿½t we welcome anything which would weaken its military and would discourage decent Americans from enlisting? (4 minutes)

ï¿½ Do you think that church groups which bring Third Worlders into the US, and purposely settle them in the few remaining White areas of the country, do so for ï¿½humanitarianï¿½ reasons? Hell, no: The process is extremely lucrative, with tens of millions in government subsidies doled out to groups that engage in such genocide against us. (9 minutes)

ï¿½ Itï¿½s very strange that Jewish groups virtually unanimously support the Muslim invasion of White nations, even when the Muslims directly threaten the Jewish minorities there. Itï¿½s almost as if destroying what is left of the West is more important to them than protecting their own people. (12 minutes)

ï¿½ Even after White people have been eliminated ï¿½ as they nearly have been from some parts of California ï¿½ huge, ongoing, violent racial conflicts between non-White groups rage even stronger than before. (31 minutes)

ï¿½ Not only are illegal aliens using our parklands (including some that we are now forbidden to use) for invasion routes and trash

dumps, but some of the invaders now have the audacity to start mining and the harvesting of valuable plant life there. (37 minutes)

ï¿½ Once you understand that the main agenda of the oligarchs is the de-Europeanization of the United States, everything they do starts to make sense. (58 minutes)

ï¿½ Chicago ï¿½ where the gun laws are unbelievably strict and where a Newtown-size murder toll happens regularly and with hardly any notice from the controlled media ï¿½ is a place where the old phrase has literally come true: ï¿½When guns are outlawed, only outlaws will have guns.ï¿½ (1 hour 4 minutes)

ï¿½ Isnï¿½t it interesting that some of the most prominent political and media proponents of ï¿½gun controlï¿½ have near-total ignorance of current laws and technical facts about firearms? This probably indicates they themselves have no interest in the issue, but are just fronting for the money-men as usual. (1 hour 13 minutes)

Thanks to Marty, N2IRJ, youï¿½re able to listen to the Liberty Net right now on your computer here at http://3950.net/ ï¿½ or download the file and listen on your portable mp3 player. Check in via your ham rig, and also check out the 3950.net live feed and discussion room during net times as well as the new Ustream Liberty Net feed from N2SAG. These Internet adjuncts let you make an end run around jammers and a fickle ionosphere.

Join in or listen to the most exciting net on the amateur bands every Saturday night starting at 10PM Eastern Time.

Our thanks go to W1WCR for his hard work and courage in keeping this very important part of the amateur radio service alive for almost 40 years!

262. TRYING TO SAVE MONEY EASY MONEY FAST AND HONEST?.

Newsgroup: rec.radio.shortwave
Date: 2013-02-02 18:30:10 UTC
From: neysi.paulette@gmail.com
Message-ID: <7ce666f6-9614-4675-b05d-01d7cd2aaf52@googlegroups.com>
Source record: 248254

TRYING TO SAVE MONEY EASY MONEY FAST AND HONEST?.

Whatever the purpose for which they want this money ...

READ THIS, I DO NOT SELL ANYTHING TO MAKE MONEY ONLY ☐
First of all, the main purpose of this letter is to let you know that this is an honest, legal and extremely profitable.
IF YOU WANT TO BE ONE OF THEM NOT miss this opportunity. So I recommend CAREFULLY AND FOLLOW INSTRUCTIONS EXACTLY THIS LETTER, and you will not regret having read this article and put into practice ...

********** **********

Hello friends around the world I have news excellent devote only a couple of minutes and read;
I LOVE THE INTERNET ... I was surfing when I saw an article that said "you need quick cash!". I thought ... "ON THE INTERNET? As will be? But out of curiosity I read it and reread it and ask me if it is really so? .... This article described how to mail a dollar bill ONLY 6 PEOPLE AND MAKE $ 50,000 IN CASH IN 4 WEEKS!.
OK, the $ 50,000 in cash could be reaching a high point, but it was possible. I figured maybe I could have a range of $ 1,000 or so, so I ventured. "He who dares, wins" the saying goes and I did! .... As they said the instructions in the article, mail ONE dollar bill to each person, [system as my logic is that thousands of people continue these cloths and haci thousands of dollars come to you is a string class which circulate money]

Prepare to do, this is how ...

********** **********
ATTENTION: Read this carefully. It is not necessary, but is a
good idea to print these pages so you can read the details in the case
you have doubts.
********** **********
INSTRUCTIONS:

1.PASO:

Get 5 sheets of paper and writes: "PLEASE INCLUDE YOUR NAME ON MY LIST OR E-MAIL" OR "PLEASE ADD MY NAME TO YOUR LIST". Then, write your name, address and e-mail (e-mail). As a nice touch that also put POSITION appeared each name of the people when you sent your dollar (Ex: "You were in position 3" or "You were in slot 3") to make it more complete. That is, to make money and have fun at the same time. Now only get 6 tickets for $ 1.00 U.S. dollar each. Fold each of the 5 pages of white paper written about each of the five dollar bills $ 1.00 AMERICAN (NOT send checks or other
payment ONLY AMERICAN dollar bills), put them in 5 envelopes and send them to each of the five people listed below lines (so you now have 5 sealed envelopes each with the phrase referred to one dollar respectively). The idea of folding the paper around the ticket is not lost on the road [money tempts know postmen jjujuju

1. Alberto José Anacleto Rosales, Assoc Provivienda "San Pedro" Mz.B Lte. 35, approx. H to the km 27.5 of the PANAM. NORTH (Whereabouts "FAMESA"), Stone Bridge District, Zip: Lima 22, Peru

2. Gisela Cardenas Yauri, Central Mail SERPOST Arequipa - Peru

3. Shock Huarca Lizardo, 1263 La Avenida Ramón Castilla Tomilla, Cayma District, Arequipa Province, Arequipa Region, Peru

4. Trejo Jose Francisco Rivera, Cas. Vaquerano, Santa Cruz Porrillo, Tecoluca, San Vicente, El Salvador.
5. Neysi grace, [8565 SW 152nd Ave Miami FL 33193-4108 114 th United States] [neysi.paulette @ gmail.com] for shipping by paypal [neysi.paulette @ gmail.com] is my own.

2. STEP:

Listen carefully, this is the way as you will receive money in the mail. Look at the list of the five people, erase the # 1 name in the list above, move the other names up one position (# 2 becomes # 1, # 3 in # 2, # 4 to # 3 , # 5 to # 4) and add your name, if yours! so I come to you-at # 5 on the list, that is, in the end. It also includes your name, your address, zip code and country, as did each of the list.

3. Step:

Change everything you think of this article, but try to keep as close as possible to the original. Now put your article in at least 200 newsgroups, also called discussion forums or newsgroups (there are over 24,000 groups). Find them in the search engines
Forums or free ads. You only need 200, but the more amount you put, more money will come. Here are some pointers on how to enter the newsgroups. MANAGING THE NEWSGROUP: First, you do not need to rewrite this entire letter to do your own. Just put your cursor at the beginning of this letter and drag down so that all is "shady". Then press the CTRL + C, so is in the memory of your
computer. Then open an application preferably Notepad (Notepad), Wordpad or MsWord. Then, when you open any of these applications place the cursor at the beginning of a blank sheet and press CTRL + V, and I have this card and can add your name and address on the
5 following the instructions above. Finally save this letter with your changes in a new application file. IS EVERYTHING! All you have to do now is get into different "newsgroups" or classifieds or free ads, etc.. and publish it. Remember that every time you want to do enough to open the saved file, copied **********
****
Remember, the more NEWSGROUPS, MORE ANSWERS (AND MONEY)
RECEIVE! BUT YOU HAVE TO POST A MINIMUM OF 200.
********** **********
AND NOW! ... You will be receiving money from around the world, to places you never know in a few days!. ** MAKE SURE ALL THE ADDRESSES ARE CORRECT ** Now the WHY of all this: 200 ads postings, say I receive only 5 replies (a very low example). Then I made $ 5.00 with my name at # 5 of this letter. Now, each of the 5 persons who just sent me $ 1.00 make the MINIMUM 200 postings, each with my name at # 4 on the list and only 5 persons respond to each of the original 5, this makes $ 25.00 more I receive, now these people put at least 200 newsgroups with my name at # 3 place and only receive 5 replies each. Would be making another additional $ 125.00. Now this 125 people put a MINIMUM 200 with my name at # 2 place and I receive an additional $ 625.00. OK, here's the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at # 1 and each receives so TIME IS

IMPORTANT, so do not miss more than 7 days of the time you see this e-mail or posting. Let all business rules.

"The fruit of honesty is reflected in a very short time and last forever" Chinese proverb. Thank you again.

Try it. GOOD LUCK ...

REALLY WORKS!! WHERE YOU PUBLISH IT POSSIBLE TO WIN
FAST MONEY ...

! NOT FORGET TO PUT YOUR E-MAIL FOR IMMEDIATE RESPONSE SEND
GET MONEY.

One time a bunch of years ago I told George 'Afraid of Ouija boards' Noory that space aliens/UFOs do not exist. He replied (via email) and he said, It isn't over yet. Looka here ilk, Earth is about four billion years old. Earth will be that Finis in about four more billion years, assuming something out there that is big enough doesn't do a crash dive on Earth first. So, where are those space aliens/UFOs??? Show me the PROOF.

Highlights of Solar and Geomagnetic Activity
28 January - 03 February 2013

Solar activity was at very low to low levels for the past week. The
largest flares of the period were a C8/Sn flare at 03/0610 UTC from
region 1667 (N22, L=197, class/area Dsi/160 on 03 February) and two
C2/Sf flares at 02/1958 UTC and 03/0224 UTC, also from region 1667.
An asymmetric, partial-halo Coronal Mass Ejection (CME) was observed
in SOHO/LASCO C2 coronagraph imagery around 31/0800 UTC with an
estimated plane-of-sky speed of 550 km/s. The event appeared to
orginate from a filament eruption on the southeast limb. No further
earth-directed CMEs were observed.

No proton events were observed at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit was at
normal to moderate levels. Moderate levels were observed on 29-31
January and again on 02-03 February.

Geomagnetic field activity was quiet to unsettled except for a short
period of active to minor storm levels at high latitudes on 02
February. Solar wind speeds began the period at about 430 km/s and
gradually decreased to around 300 km/s by 30/2300 UTC. By 01/2115
UTC, an increase in solar wind speed and temperature was observed
indicative of a negative polarity coronal hole high speed stream.
Total field (Bt) increased from 4 nT to 11 nT while the Bz component
of the interplanetary magnetic field varied between +/- 9 nT. The
geomagnetic field responded with quiet to unsettled conditions
through 02 February with periods of active to minor storming at high
latitudes. By 03 February, solar wind speeds were in decline as
effects from the coronal hole high speed stream began to wane. The
geomagnetic field was quiet on 03 February. Solar wind speeds ended
the period at approximately 400 km/s. At 03/1130 UTC, the lower
energy particle flux reported by the EPAM instrument aboard the ACE
spacecraft rose sharply and then leveled off while some of the lower
```

energy channels declined. This was likely indicative of the passage of the 31 January CME, however there was no clear shock signature associated with it.

Forecast of Solar and Geomagnetic Activity
04 February - 02 March 2013

Solar activity is expected to be at very low to low levels with a slight chance for M-class flares until region 1667 rotates around the west limb on 14 February. Very low to low levels are expected for the rest of the forecast period, barring significant active region emergence or development.

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be at normal to moderate levels throughout the forecast period with possible high levels on 06-07, 11-12, and 24-25 Februrary due to coronal hole high speed stream effects.

The geomagnetic field is expected to be quiet to unsettled with a chance for active periods on 09-10, 22-23 February, and again 01-02 March due to recurrent coronal hole high speed stream activity. Otherwise, mostly quiet conditions are expected.

Blueberry doggy was born in Raymond, Mississippi, she aints no space alien. I paid $150.00 when she was eight weeks old a little over ten years ago. Doggy is going to get her teeth cleaned next month at http://www.animalmedicalcenterofjackson.com And then a month or two after that I am going to buy me a Google Nexus 10'' Tablet. Blue Heeler dogs,.. http://www.cattledog.com http://www.acdca.org

I saw the ad in the newspaper classifieds, Australian Cattle Dog puppies for sale. So, I drove over there, Raymond is Eight miles Southwest of doggy's couch. Of course it was the guy's (he is a Ham Radio operator too) wife who took my money. That figures.

2616 voice sounds over static, zero percent copy
4608 100 percent copy
8038 static with some odd sferics

propagation conditions normal for my location, nothing unusual
Western Nebraska, Sony SW7600GR with 40 foot long wire at 0300z

radio/monitoring/shortwave-faq
Subject: Welcome to rec.radio.shortwave (Shortwave)
Maintainer: ralph@cbnews.cb.att.com (Ralph Brandi)
Last Posted: 28 Jun 1996 00:09:45 GMT

We have been informed by the readers of rec.radio.shortwave that a |
recent (2008) attempt to update these documents and post them (or links |
to them) at regular intervals, has since been abandoned, so the project |
is once again open to a sincere and motivated volunteer. |

We are interested in offering any technical support necessary to get
these articles updated and automatically posted again at regular
intervals. This would include establishing contact with the original
maintainers for any necessary permissions. We would prefer to seek new,
dedicated maintainers at this time, rather than start auto-posting the
original articles ourselves.

For more information about our newsgroup, see:
```

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

http://news.google.com/news/url?sa=t&fd=R&usg=AFQjCNH-XkuE1-OfEbLu6iCPh2XyW2lvPw&url=http://www.theatlantic.com/technology/archive/2013/02/heres-what-a-solar-flare-sounds-like-when-it-reaches-earth/272935/

Heres What a Solar Flare *Sounds* Like When It Reaches Earth
The Atlantic
This particular solar burst was recorded using two simple shortwave radios connected to a three element yagi antenna. The Sun radiates across the full spectrum but, serendipitously, it can be very strong and hot at common shortwave radio frequencies.

If it was an X8.7 then we would have something to talk about. Solar
activity is so low, I'd be more worried about the sun going cold than
any superstorm. Uh oh - gave them a new topic.

And I still get Pop Comm and Monitoring Times delivered by the
U.S.Postal Service.

SB PROP @ ARL $ARLP006
ARLP006 Propagation de K7RA

ZCZC AP06
QST de W1AW
Propagation Forecast Bulletin 6 ARLP006
>From Tad Cook, K7RA
Seattle, WA February 8, 2013
To all radio amateurs

SB PROP ARL ARLP006
ARLP006 Propagation de K7RA

Average daily sunspot numbers hardly changed from last week and the
week prior, but average daily solar flux bounced back to about the
level it was from two weeks ago.

Average daily sunspot numbers were down five points to 50.7, and
average daily solar flux was up 7.7 points to 106.4.

Predicted solar flux values are 105 on February 8-10, 110 and 105 on
February 11-12, 100 on February 13-14, 110, 115 and 110 on February
15-17, 115 on February 18-19, 110 on February 20-21, 105 on February
22, 115 on February 23-24, then 110, 105 and 100 on February 25-27,
95 on February 28 through March 2, 115 on March 3-4, 120 on March
5-6, and 125 on March 7-8.

The predicted planetary A index is 22, 15 and 10 on February 8-10, 5
on February 11-18, 8 on February 19, 5 on February 20-21, then 15,
10 and 8 on February 22-24, 5 on February 25-28, 10 and 8 on March
1-2, 5 on March 3-7, and 8 on March 8-9.

OK1HH says geomagnetic activity should be quiet to unsettled on
February 8, quiet to active February 9-10, quiet to unsettled
February 11-12, quiet to active February 13-14, quiet to February
15-16, quiet February 17-21, active to disturbed February 22-23,
quiet to unsettled February 24-25, quiet on February 26-27, mostly
quiet February 28, quiet to active March 1, quiet to unsettled March
2, and mostly quiet on March 3.

I've been looking at the predictions for planetary A index and solar
flux, and it is interesting to note how they change over time. The
planetary A index prediction for February 3 for over a month was a
value of 5, until January 31, when it changed to 18. Then on
February 1 it was 15, and the same on February 2. But on February
3, the actual value was 4. A similar thing happened with the

February 4 prediction. It was 5 up until January 31, when it changed to 15, then for March 1 and 2 it was 12, then it changed back to 15 on March 3. The following day, March 4, the actual value was 4 again, just as it was the day earlier.

On February 7 the planetary A index prediction for February 8 is 22, and on February 6 the prediction for February 8 was 8. Prior to that it was 5. We will see the actual value at the end of the day today, February 8.

We heard from Fabrizio Valdirosa, a shortwave listener in Italy, who inquired about the average sunspot number for all of 2011. We mentioned recently that it was 29.9, but Fabrizio thought this was too low while looking at the monthly averages at, http://www.swpc.noaa.gov/ftpdir/weekly/RecentIndices.txt.

I recalculated by again totaling all of the daily sunspot numbers for 2011, which is 29,239. Divide that by 365 days, and we get an average daily sunspot number for that year of 80.1. I have no idea how 29.9 was previously calculated, except that I somehow came up with a total for the year of 10,913 instead of 29,239 and it was my own error. So the average yearly sunspot numbers for 2008-2012 were 4.7, 5.1, 25.5, 80.1 and 82.3.

Don Street, HS0ZEE wrote to ask about seasonal variations mentioned in the bulletin, and asked, "Here in Asia, Spring and Fall are not so well defined, perhaps for reader like me it would be helpful to mention which month you refer to." We are just referring to the seasons as the time between Equinox and Solstice, Solstice to Equinox, etc. This page gives the dates for the seasonal changes:

http://wwp.greenwichmeantime.com/longest-day/equinox-solstice-2010-2019.htm.

Don also likes the HAP charts for HF propagation produced by the Australian government and notes, "I find the charts near to actual band conditions. Unfortunately they are based on the previous hours observed conditions, but still very useful."

Here is the link Don refers to:

http://www.ips.gov.au/HF_Systems/6/6/1.

Bill Bliss, W1WBB of Portsmouth, Rhode Island wrote: "Don't believe I've seen these two new forecast products from the SWPC mentioned in your weekly column, found via link on their home page: http://www.swpc.noaa.gov/index.html

"They are issued twice daily and I've found them helpful as an additional tool for predicting near-term propagation on the HF/MF amateur bands. Links for feedback on both the 3-Day Forecast and the Forecast Discussion are also provided. Positive feedback on these 'experimental' products from the amateur community (accepted up through Feb. 12) may help ensure they become a permanent part of

SWPC's Data and Products area."

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net.

For more information concerning radio propagation, see the ARRL Technical Information Service web page at http://arrl.org/propagation-of-rf-signals. For an explanation of the numbers used in this bulletin, see http://arrl.org/the-sun-the-earth-the-ionosphere. An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. Find more good information and tutorials on propagation at http://myplace.frontier.com/~k9la/.

Monthly propagation charts between four USA regions and twelve overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are at http://arrl.org/bulletins.

Sunspot numbers for January 31 through February 6 were 47, 65, 54, 79, 30, 41, and 39, with a mean of 50.7. 10.7 cm flux was 102.7, 103.7, 111.8, 111.1, 106.7, 105.1, and 103.5, with a mean of 106.4. Estimated planetary A indices were 1, 4, 9, 4, 4, 2, and 2, with a mean of 3.7. Estimated mid-latitude A indices were 1, 4, 9, 6, 3, 2, and 2, with a mean of 3.9.

Yep, at least one of them is Channel Z, but almost seems as though there is
another underneath, not sure.

You are right. I heard the other station too. Almost sounded like CRI
fading in then fading out. Good timing. Did not even see your post
until now.

Yeah, thought I could hear the other station in there yet at about 2352, I think
Z might sign off shortly, so we'll see.

I dunno about Larry,, but I am a believer ... I am getting much better and
wider range of results. Google had me in a bubble where I would only see
what Google thought I was interested in. Now I am seeing new people and
ideas. I made DDG my default search engine on all three of my browsers:
Chrome, Firefox, and IE.

Liberty Net: February 2, 2013

http://3950.net/2013/02/liberty-net-february-2-2013/

by Kevin Strom, WB4AIO

WHEN THE AMERICAN revolutionaries of 1776 were organizing and speaking out, they didnï¿½t use British-owned newspapers ï¿½ they created their own media and found a way to bypass the established structures. The explosion of free speech was so effective that, after the revolution, they enshrined freedom of speech as the most sacred right of the people. The Liberty Net is a group of amateur radio operators who have been bypassing the censored media and exercising their right to freely share their thoughts since 1974. Join us this week! Listen: Liberty Net 2/2

Here are some examples of the concepts discussed and debated during the latest Liberty Net session:

ï¿½ Isnï¿½t it interesting that the Middle Eastern nations which the Washington regime has bombed and invaded and fomented revolutions in were all attempting to break free of the ï¿½Westernï¿½ fractional reserve banking system? (16 minutes)

ï¿½ Is the military action in Mali part of a secret deal to get hold of the substantial gold reserves there? Is there any connection to the inability of New York banks to account for trillions in foreign gold deposits that are suddenly ï¿½unable to be deliveredï¿½ to their owners? (19 minutes)

ï¿½ The public meetings that the New York State Police scheduled to convince citizens to comply with the new draconian gun ï¿½lawsï¿½ there are going very well ï¿½ if by ï¿½very wellï¿½ you mean that hundreds of people, possibly a majority of the attendees, are openly refusing, right in the face of the police, to obey these flagrantly illegal statutes. (23 minutes)

ï¿½ Banks, and the governments they own, can now issue all the currency they want digitally and without the slightest effort. What, then, is the purpose of taxation? To spy on you, control you, and punish dissidents, of course. (38 minutes)

ï¿½ An increasing number of researchers and writers of many different political points of view are suggesting that the gold supposedly stored in Fort Knox is long gone, just like the gold we thought was in the vaults of the New York banks. The really interesting question is: Who took it? (49 minutes)

ï¿½ The ï¿½cash for clunkersï¿½ program ended up destroying hundreds of thousands of older cars, allegedly to boost the economy. What it ended up doing was massively driving up the cost of used cars, which hurt millions of struggling people ï¿½ in order to help globalist corporations. (1 hour 5 minutes)

ï¿½ Despite the recent sub-prime mortgage collapse, the Washington regime is instituting yet another program to forcibly transfer wealth to non-Whites ï¿½ this time through rules requiring mortgage loans to ï¿½minoritiesï¿½ on special subsidized terms and with lower standards. (1 hour 8 minutes)

ï¿½ When University of West Georgia student Nkosi Thandiwe shot three young White women, the Black killer openly stated he did so because he had learned in college that Whites were evil. Not only is this racially-motivated triple shooting not a major national news story, but independent researchers had to look up the womenï¿½s pictures on an online social network to discover that they were White. Amazingly, the local Atlanta Journal-Constitution used the same social network for biographical information on the women in its initial news stories, but pretended that the pictures didnï¿½t exist and refused to even mention that the women were White. (1 hour 12 minutes)

Thanks to Marty, N2IRJ, youï¿½re able to listen to the Liberty Net right now on your computer here at http://3950.net/ ï¿½ or download the file and listen anytime on your mp3 player. Check in over the air, and also check out the live feed and discussion room during net times, and the additional live feed and chat room from N2SAG, that let you make an end run around jammers and a fickle ionosphere.

Join in or listen to the most exciting net on the amateur bands every Saturday night starting at 10PM Eastern Time.

Our thanks go to W1WCR for his hard work and courage in keeping this very important part of the amateur radio service alive for almost 40 years!

Currently hearing at least three pirates at 2230:

6920, 6925 and 6930.

No time to ID them yet. The one on 6920 just ID'd as Radio Ronin Shortwave at 2233.

Now on to the others.

337. Latest Great Liberty Nit-Wit-Net via WB4AI0 .

Newsgroup: rec.radio.shortwave
Date: 2013-02-10 02:43:17 UTC
From: Keven Albert Strum <WB4AI0@yahoo.com>
Message-ID: <a36a43c9-475f-4899-86cf-6bab15ecbd9b@p17g2000vbn.googlegroups.com>
Source record: 248329

This past Saturday night, The Great Liberty Nit-Wit-Net opened
with . .

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Later in the evening, the discussion moved on to other topics
like ...

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Finally in the wee hours of Sunday morning,
The Great Liberty Nit- Wit- Net ended with ..

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

As usual we thank net control for providing a completely new agenda
of
topics never before discussed on ham radio nets.

```
:Product: Weekly Highlights and Forecasts
:Issued: 2013 Feb 11 1018 UTC
# Prepared by the US Dept. of Commerce, NOAA, Space Weather Prediction Center
# Product description and SWPC contact on the Web
# http://www.swpc.noaa.gov/weekly.html
#
# Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
04 - 10 February 2013

Solar activity was low. The largest flare of the period, a C8/1f
with associated Type-II (estimated at 548 km/s) and Type-IV radio
sweeps, originated from Region 1667 (N22, L=200, class/area Dso/100)
on 06/0021 UTC. A CME with an earth-directed component was
subsequently observed in LASCO C3 imagery at 06/0042 UTC. A long
duration C2 flare associated with a 27 heliographic degree Hyder
flare eruption centered near N23W06 at 09/0640 UTC was also
observed. This event also produced a potentially earth-directed CME
which was observed in LASCO C2 imagery at 09/0709 UTC. The largest
active region of the period was Region 1665 (N10, L=242, class/area
Hsx/170 on 04 February), but this region failed to produce any flare
events. The most magnetically complex region was Region 1670 (N17,
L=161, class/area Dsi/160 on 10 February), although still on the
disk, this region has also failed to produce any flare events. In
additon to the CMEs already described, several other were noted on
LASCO and STEREO coronagraph imagery throughout the week. Most of
these were associated with filament eruptions, but none deemed
geoeffective.

No proton events were observed at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit was at
normal to moderate levels.

Geomagnetic field activity was predominately quiet with two periods
of unsettled conditions (08/0600-0900 UTC and 08/1500-1800 UTC)
prompted by the 08/0400 UTC arrival of the 06 Feb CME desribed
above.

Forecast of Solar and Geomagnetic Activity
11 February - 09 March 2013

Solar activity is expected to be very low to low.
```

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be at normal to moderate levels for most of the week, possibly reaching high levels on 13 - 18 February in response to positive polarity coronal holes/high speed streams (CHs/HSSs) 93 and 94.

Geomagnetic field activity is expected to be predominately quiet, with isolated unsettled conditions on 12 Feb, when the Hyder flare CME mentioned earlier is expected to arrive. Quiet to unsettled conditions are expected to persist through 16 February due to CH HSS effects.

Huh? Is it on the main board or something? Use a capacitor and a zener
diode.

The weather here now (and yesterday was too) is absolutely Beautiful. Y'all ought to see my front yard, it desperately needs me to git out thar and mow it, but the ground is still to wet from last weeks heavy duty rains. My Daffodil flowers are coming up and blooming too. If I had some Tulips, they would probally be about ready to bloom too. Look out Holland! When you worrre a Tulip, a bright yellowwww Tulip and I wore a red, red Rose,,, you made life cheery when you called me Deary,,,,, http://www.gardenmama.com

And, I really got to thank them, because a good old friend of mine turned me on to Warren Zevon back in the early 70's, and we traveled, quite perilously out to California.

We talked about, at least, being lyricists, as he was more of a musician than I, and I had been thinking of him a few months ago.

After listening to Warren, I came up with part of a tune, and then looked up, once again, registering with ASCAP and BMI.

And suddenly, I knew why those lyrics got slapped into my head, it was because of my late friend Kevin (whom I'd not seen for over 38 years), who told me to get up off my butt, pick up a pen (and, perhaps a guitar once again, which I just laid my eyes on, this very afternoon), and put the words of life to paper.

QST de W1AW
Propagation Forecast Bulletin 7 ARLP007
>From Tad Cook, K7RA
Seattle, WA February 15, 2013
To all radio amateurs

SB PROP ARL ARLP007
ARLP007 Propagation de K7RA

Low levels of solar activity continue, the same as the past few weeks. Sunspot numbers remain remarkably consistent, with average daily numbers for the four reporting weeks since January 17 at 56.4, 55.7, 50.7 and finally 51.3 for the past week. As you can see, average daily sunspot numbers rose less than a point from the previous week to the past week. Average daily solar flux receded 2.4 points to 104. Geomagnetic conditions remain calm.

The ARRL International DX CW Contest is this weekend. Conditions will probably be about the same as last year, because solar activity is about the same as this time in 2012. See http://www.arrl.org/arrl-dx for contest details.

The latest prediction for solar flux shows values of 100 for February 15-16, 105 on February 17-19, 100 on February 20-22, 115 on February 23-24, 110 and 105 on February 25-26, 100 on February 27 through March 3, 95 on March 4-9,115 on March 10 and 120 on March 11-13.

The predicted planetary A index is 5 on February 15-20, 9 on February 21-22, 8 on February 23, 5 on February 24-28, then 10 and 8 on March 1-2, and 5 on March 3-17.

Every week F.K. Janda, OK1HH gives us his thoughts on geomagnetic conditions over the next few weeks. Generally for HF propagation, particularly for the higher bands (10-20 meters) we would like to see very little geomagnetic activity, but with as many sunspots and as much solar flux as possible. We have seen a lot of quiet geomagnetic conditions over the past few years, but not much in the way of sunspots or high solar flux values.

OK1HH suggests the geomagnetic field will be quiet to unsettled on February 15-16, quiet on February 17-21, quiet to active February

22, active to disturbed February 23, mostly quiet February 24-25, quiet February 26-28, quiet to unsettled March 1, quiet to active March 2, mostly quiet March 3, quiet to unsettled March 4, quiet March 5-6, mostly quiet March 7-8, quiet March 9, and quiet to active on March 10.

Don't miss the article in the March issue of QST, by Carl Luetzelschwab, K9LA titled "The Sun and the Ionosphere." It begins on page 48, gives an update on Cycle 24, and discusses measuring the Sun and ionosphere and relating solar flux to MUF, or Maximum Usable Frequency.

Neil Shapiro, W2NLS of Bethpage, which is on New York's Long Island, asked about relating the information in these bulletins to practical on-the-air results.

I suggested checking out the resources listed at the bottom of each bulletin, from the ARRL Technical Information Service and also the resources from the K9LA website.

One useful tool is to download the free program W6ELprop (which works on the Windows operating system) from http://www.qsl.net/w6elprop/.

You will need to enter your latitude and longitude for your default station location, and a useful tool for converting street addresses to geographical coordinates is at http://www.latlong.net/convert-address-to-lat-long.html.

You can use an average of the previous 5 days sunspot numbers from here:

http://www.swpc.noaa.gov/ftpdir/indices/DSD.txt

For the K index, either use the latest Middle Latitude numbers from here:

http://www.swpc.noaa.gov/ftpdir/indices/DGD.txt

Or use the planetary number from WWV:

http://www.swpc.noaa.gov/ftpdir/latest/wwv.txt

I ran the numbers for Neil on February 15, from his QTH to the Czech Republic. It looks like 15 meters is a good bet from 1430-1700z, 17 meters 1330-1800z, and 20 meters over the same period as 17 meters, but stronger signals on 17 meters (assuming power levels and antennas are equal). It looks like 30 meters should open up around 1800z, and have strongest signals 2130-0100z, and 40 meters 2000-1000z, with best signals around 2230-0630z.

An alternative to sunspot numbers would be to use solar flux. You can set W6ELprop to default to either type, or change it on the fly by entering F103 (for example) as solar flux of 103, or S66 as

sunspot number of 66.

The engine used for driving W6ELprop was originally designed to work with the predicted smoothed sunspot number for the month, and it doesn't really work well to try to use the latest day's numbers. So an average for the past 5 days is a compromise.

Another useful tool is a new one from Stu Phillips, K6TU of Woodside, California: http://k6tu.net/.

This one is interesting. You subscribe to this service (but I think there is a free trial) and tell it what kind of prediction you want to run, then after making the calculations, it emails a link that you use to display them. For each band, you can step through hour-by-hour to see maps showing where your signals will be strongest, with different colors used to express different signal levels. It is interesting to see how the coverage areas shift, hour-by-hour.

We heard from Peter Thulesen, OX3XR in Nuuk, Greenland. He wrote, "Just to report my observations on 28 MHz propagation from Greenland (grid GP44) to North America, US and VE in the evenings after sunset here in Greenland. Around 2000-2200 UTC I very often have worked several/many stations on 28 MHz CW from all US and VE. This has been the situation January 2013. In the weekends where I have the possibility to monitor the bands during the day 28 MHz seems to be more dead towards W and VE than in the evening just after sunset.

"In the evening after sunset 28 MHz seems dead listening on the band. However, after calling CQ a few times around 28.025 MHz W and VE stations start to answer my call. The signal strength is good up to 599 and stable signals with only little QSB.

"When conditions have dropped for CW contacts I can normally continue working JT65 stations on 28 MHz, maybe another 30-45 minutes. I'm using a sloping dipole toward Europe and 100 watts."

Jeff, N8II of West Virginia wrote: "The seasonal changes we expect on the bands are occurring. Long path propagation has disappeared on 30 meters into SE Asia and the evening openings much improved on 12 thru 20 meters into East Asia. We get JAs some nights in the 2200Z hour on 12, 15 is better and on 20 CW the JTs, JT1AA/3 and JT1E, are much louder around 0100Z along with good openings to UA0U area which were almost nil in mid January.

"Conditions have been quite good at times into central Asia on the low bands. 4S7NE was logged around 0125Z on 40 meters CW on the February 8, T6LG continues to be active on 80 CW and EY8MM was also heard around their sunrise.

"I had quite a struggle completing a QSO with K7EKD near Seattle for his last state on 160 meters due to high noise on his end, but we made it at 0200Z on the February 7."

When Jeff mentioned K7EKD, I thought the call sounded eerily familiar. K7EKD taught electronics in my high school. I spoke with him a few times, but unfortunately was expelled from school (hey, it was the late 1960s!) before I got around to taking any of his classes. At that point I was WA7CSK and had been on the air four years. It was certainly an interesting time to be a teenager.

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net.

For more information concerning radio propagation, see the ARRL Technical Information Service web page at http://arrl.org/propagation-of-rf-signals. For an explanation of the numbers used in this bulletin, see http://arrl.org/the-sun-the-earth-the-ionosphere. An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. Find more good information and tutorials on propagation at http://myplace.frontier.com/~k9la/.

Monthly propagation charts between four USA regions and twelve overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are at http://arrl.org/bulletins.

Sunspot numbers for February 7 through 13 were 58, 57, 58, 45, 60, 55, and 26, with a mean of 51.3. 10.7 cm flux was 102.8, 104.2, 107.6, 105.9, 105.2, 101.8, and 100.3, with a mean of 104. Estimated planetary A indices were 6, 7, 3, 4, 4, 4, and 11, with a mean of 5.6. Estimated mid-latitude A indices were 7, 8, 3, 3, 3, 3, and 9, with a mean of 5.1.

398. Latest Liberty Net via WB4AIO

Newsgroup: rec.radio.shortwave
Date: 2013-02-16 02:22:51 UTC
From: Kevin Alfred Strom <kevin.strom@revilo-oliver.com>
Message-ID: <kfmqhr$ea7$1@speranza.aioe.org>

Liberty Net: February 9, 2013

http://3950.net/2013/02/liberty-net-february-9-2013/

by Kevin Strom, WB4AIO

JIM, AB3RA, NCS of the Survival Net, took the helm of the Liberty Net for over two hours this week when W1WCRï¿½s antenna system was damaged. Check-ins and discussions were plentiful and the conversation flowed smoothly until Vic resumed control after midnight, showing that the Liberty Net is a true community effort.

Here are some selections from the thoughts brought forth on the Liberty Net this session:

ï¿½ Why is the Washington regime ï¿½ even agencies that normally have nothing to do with weaponry, like NOAA ï¿½ buying up multiple billions of rounds of ammunition, causing an extreme shortage at retail stores? (16 minutes)

ï¿½ The Boy Scouts of America are being pressured by some of the billionairesï¿½ corporations ï¿½ including Home Depot, Bank of America, AT&T, Verizon, and UPS ï¿½ to start accepting homosexuals as leaders and participants. (24 minutes)

ï¿½ Itï¿½s quite ironic that the rogue LA policeman whoï¿½s been on a murder spree with his government-provided weapons is a fanatical proponent of taking away _our_ guns. (40 minutes)

ï¿½ Is part of the rage of Blacks in America due to the fact that they were tricked by the establishment into supporting multiracialism, which has now resulted in them being pushed to the ï¿½back of the busï¿½ behind tens of millions of illegal and legal Third World immigrants? Looks like the Black separatists had it right all along. (59 minutes)

ï¿½ Hereï¿½s an idea ï¿½ letï¿½s limit the military, and FBI, and police, and all of the regimeï¿½s agencies, to only the kinds of guns, ammunition, and magazines that we, the citizens, are permitted to use. Imagine all the lives that would be saved! (1 hour 16 minutes)

ï¿½ Oklahoma Governor Frank Keatingï¿½s brother, former FBI and BATF official Martin Keating, wrote a book called _Final Jihad_ in 1991 ï¿½ four years before Tim McVeigh bombed the federal building in Oklahoma City ï¿½ in which a bomber named ï¿½Tom McVeyï¿½ bombed a federal building and was caught at a routine traffic stop for a broken tail light, just as the real McVeigh was. (1 hour 29 minutes)

ï¿½ Obamaï¿½s inaction on the night of the Benghazi embassy attack might not have been the result of his ï¿½hatred of Americaï¿½ or irresponsibility as the faux-right-wing media are claiming. A far simpler explanation is that Obama, being a figurehead for the oligarchs, is simply not in charge ï¿½ and so naturally was unconcerned. (1 hour 38 minutes)

ï¿½ Our rulers are flirting with reinstating the ï¿½Fairness Doctrine,ï¿½ which would require regime-mandated ï¿½balanceï¿½ in all radio and television broadcasts. If instituted, it would strengthen the grip of the fake left and the fake right on the airwaves ï¿½ and real alternative, independent media would be locked out. (1 hour 55 minutes)

Donï¿½t be shy ï¿½ check in to amateur radioï¿½s historic Liberty Net every Saturday night ï¿½ on some clear frequency near (usually above) 3950 kHz SSB starting at 10PM Eastern Time. The net has to be frequency-agile to avoid receiving, or causing, interference. And check out our Internet feeds which can help you copy, and communicate with, weak stations. The ï¿½liveï¿½ links can be found in the left column of this site.

Kudos and thanks go to Vic, W1WCR, for his decades of hard work for free speech and amateur radio!

Very rare catch, I suspect, and very odd frequency for a pirate!
Being right in the middle of a crowded HFBC band must severely limit
coverage. Good work.

73,

Source record: 248393

This past Saturday night, The Great Liberty Nit-Wit-Net opened
with . .

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Later in the evening, the discussion moved on to other topics
like ...

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Finally in the wee hours of Sunday morning, The Great Liberty Nit-
Wit- Net ended with ..

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

As usual we thank net control for providing a completely new agenda
of topics never before discussed on ham radio nets.

And we still hope that chicken fornicator will honor us with a guest
check-in someday soon.

Join in tonight at 10pm eastern time for this weeks episode of The Great Liberty Net. Tonight, net control will be taking the discussion in a completely new direction.

Instead of the usual topics, they will delve into new and exciting issues such as ..

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

So get the popcorn and beverages ready. Warm up the old shortwave receiver. Invite some friends over. Email all your shortwave listener buddies. Let's all get on board for this wonderful and challenging discussion.

Tune in early before all the good seats are taken for tonight's Great Liberty Nit-Wit-Net.

You won't be sorry.

The real problem, at least in this country, is that average
intelligence is definitely _not_ rising.

I would agree with Scott Peck, who said in his late works that the
most primitive people have a simplistic, fundamentalist acceptance
of religion and its absurd myths; the more intelligent are quite
rationalistic and skeptical about religion and tend to believe that
only what they see with their eyes, and that they can understand
with their reason, is real; and the _most_ intelligent begin to
suspect that there are deep aspects of reality far beyond what our
partially-evolved minds can grasp -- aspects totally at variance and
even in contradiction to conventional religion, and yet which might
be called 'mystical' by thoroughgoing skeptics -- behind the
universe that science reveals to us.

With all good wishes,

Kevin Alfred Strom.

Hi Everyone,

I have 2 Barlow Wadley XCR-30 Mk2 receivers, one with FM tuner and the other without. I worked for Barlows at their Parow Industria factory in Cape Town South Africa during the time when they still manufactured them and was instrumental in their assembly and fault finding. Anyway, I havn't used either of them for several years since I was getting frequency drift and BFO howling on SSB and clicks throughout the rises between 12 to 30Mhz. Unfortunately, when the factory shut down their Wadley production line, I wasn't in time to take my Wadleys to the factory to have them realigned. Its been many years since. Quite recently decided to resurrect them because I looked at buying the WR-G303i Winradio but its just prohibitively expensive. Besides I would not be getting much more than I already have. Does anyone out here have the setup instructions for the S curve adjustment on a wobbulator. It would be greatly appreciated if someone can help me in this regard.

Thanks
Faried Manan.

Heard unid station on 6029 kHz tonight playing Rolling Stones at 0220
UTC. Guitar music continued until around 0245 UTC. Was not Radio Marti
and bubble jammer was still going on 6030 kHz. Probably a pirate since
he shifted frequency abruptly a couple times then went right back to
orig freq. Not the best filtering available since I was using an
IC7000 in SSB mode.

Looks like a freq to watch when I hook up the SDR.

```
:Product: Weekly Highlights and Forecasts
:Issued: 2013 Feb 18 0317 UTC
# Prepared by the US Dept. of Commerce, NOAA, Space Weather Prediction Center
# Product description and SWPC contact on the Web
# http://www.swpc.noaa.gov/weekly.html
#
# Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
11 - 17 February 2013

Solar activity was moderate. The largest flare of the period was a
M1/Sf with an associated Tenflare (340 sfu) radio burst from Region
1675 (N12, L=37, class/area Cso/050 on 17 February) at 17/1550 UTC.
The largest and most magnetically complex region of the period was
Region 1670 (N17, L166, class/area Dai/170 on 12 February). It
managed to produce two C-class flares before finally rotating off
the west limb on 16 February. Two filament eruptions occurred near
the southwest quadrant during the period. The first, a 7-degree long
filament located near S26W63, erupted beginning at approximately
12/2200 UTC. The second, a 10-degree long filament located near
S29W48, erupted at approximately 13/0300 UTC. It was later
determined that neither coronal mass ejection (CME) associated with
these filaments had a substantial Earthward trajectory. Several
other non-Earth directed CMEs were observed throughout the period as
well. However, late in the period a NE limb event showed a potential
Earth-directed CME. The ejecta was shown to be moving slowly
(approximately 300-400 km/s) using the plane-of-sky estimate but is
anticipated to be caught up in a coronal hole high speed stream (CH
HSS) and be nearly imperceptible as it passes.

No proton events were observed at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit was at
normal to moderate levels.

Geomagnetic field activity was quiet to unsettled with a couple of
isolated active periods. The first was on 13 February from
21000-2400 UTC due to prolonged periods of sustained negative Bz.
The second occurred on 16 February from 1500-1800 UTC due to the
passage of a weak transient CME.

Forecast of Solar and Geomagnetic Activity
18 February - 16 March 2013
```

Solar activity is expected to be very low to low.

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be at normal to moderate levels from 18-23 February in response to negative polarity CH HSS from CH95 and CH96, and again from 1-2 March due to a recurrent negative polarity CH HSS.

Geomagnetic field activity is expected to be predominantly quiet to unsettled with a slight chance for isolated active periods due to the effects of the negative polarity CHs mentioned previously.

ARLP008 Propagation de K7RA

Average daily sunspot numbers over the past seven days, February 14-20, rose modestly by 27 points to 78.3. Average daily solar flux was up marginally, only 1.6 points to 105.6. Geomagnetic indices rose also, with the planetary A index from 5.6 to 6.4, and the middle latitude A index from 5.1 to 6. This is compared to the previous seven days, February 7-13 reported in last week's bulletin.

There was a more substantial rise in both solar flux and sunspot numbers for a recent three days, at 104.7, 112.4 and 113.5 for solar flux, and 92, 117 and 106 for sunspot numbers. But that turned around when the sunspot number dropped from 106 to 75 on Thursday, February 21 and solar flux declined from 113.5 to 108.5.

The predicted solar flux is 105 on February 22-23, 100 on February 24, 95 on February 25-26, 100, 105 and 110 on February 27 through March 1, 100 on March 2-3, 95 on March 4-14, 100 on March 15-16, 115 on March 17, and 120 on March 18-20, which represents a peak for the next 45 days.

The predicted planetary A index is 8 on February 22, 10 on February 23, 8 on February 24, 5 on February 25-28, 10 and 8 on March 1-2, 5 on March 3-10, 7 on March 11-12, and 5 on March 13-27.

Over the next month we can look forward to improving HF conditions as we progress toward the Spring Equinox, which occurs on Wednesday, March 20 at 1102z.

Using a propagation prediction program such as W6ELprop gives us a rough idea of what the seasonal improvement might be. Running two instances of the program simultaneously, once for February 21 and the other on March 21, but with the same solar flux (I used 107) allows me to flip back and forth between the results. I did one for Seattle to Japan, and the 15 meter opening from 2200z to 0030z on

February 21 shows up as a 2130-0500z opening on March 21. Similarly, a 17 meter opening from 2130-0230z on February 21 stretches to 2030-0500z on March 21.

OK1HH predicts the geomagnetic field as quiet to active on February 22, active to disturbed on February 23, mostly quiet February 24-25, quiet on February 26-28, quiet to unsettled March 1, quiet to active March 2, mostly quiet March 3, quiet to unsettled March 4, quiet March 5-6, mostly quiet March 7-8, quiet March 9, and quiet to active March 10.

Several news articles, such as
http://www.upi.com/Science_News/2013/02/20/NASA-instrument-sees-giant-sunspot-forming/UPI-80691361403797/
and
http://www.science20.com/news_articles/giant_sun_spot_size_6_earths_grows_48_hours-104269
mentioned a huge growing sunspot group 1678 that might spit out solar flares. But this spot is way over on the western horizon (yes, the right side is referred to as "west" on the Sun) and about to slip away from view. It is not geo-effective, which it would be if it appeared in the center of the visible solar disc.

Jon Jones, N0JK of Lawrence, Kansas (where I was born!) has long enjoyed working 6 meter E-skip and even DX using very modest and even compromised antennas. Jon reported on February 16: "Julian, XE2JS DL68 had a nice 6 meter Es opening to the Midwest Saturday evening (February 17 UTC). I worked Julian while I was mobile on highway 40 west of Lawrence, KS EM28 with 58 to 59 signals at 0135 UTC. My 6 meter mobile antenna is a 2 meter 5/8 mag. mount whip (quarter-wave on 6 meters). Saw ZL1RS worked TI5/N5BEK earlier at 2254 UTC February 16."

Yes, Jon feeds that 2 meter whip directly on 6 meters, no change in loading or any modification. That distance between him and XE2JS is a little less than 1,000 miles.

On February 19, Jon reported: "The whip I currently use has a 1.1 to 1 SWR, as-is on 6 meters. Some 2 meter mag antennas don't match well on 6 and may need to be trimmed. ZL1RS later worked KD5PBR, N5DG, NW0W and a few other stations on 6 meters around 0230 UTC on Feb. 17. Likely an Es link on to TEP. (Jon means sporadic-E propagation linked to trans-equatorial propagation. See
http://www.ips.gov.au/Category/Educational/Other%20Topics/Radio%20Communication/Transequatorial.pdf
or
http://www.amateur-radio-wiki.net/index.php?title=Trans-Equatorial_Propagation
for info on TEP).

On February 21 Jon wrote, "Even better, I heard ZL1RS CW on February 20 at 2300 UTC on 50.087 MHz, about a 339 RST. This was on an attic dipole. I am sure I could have worked him with better antenna."

Jeff Hartley, N8II of Shepherdstown, West Virginia wrote on February 17: "I had limited time due to working 1700Z-0230Z over the weekend, but found conditions at least on 80, 15 and 10 meters to be excellent during the ARRL CW DX contest.

"In just a few hours on 80 meters around 0140-0440Z Saturday the February 16 and 0230-0400Z Sunday, I managed to work 270 QSOs and 67 DXCC countries with a 1/4 wave ground plane. Conditions were overall the best to Europe I can ever remember in a contest. I was able to run a steady stream of callers at times, the best I have ever done on 80. I didn't make any QSOs with central Asia, but the well equipped big guns did work that area. I was called by C4N in Cyprus with a huge signal, and also a 4Z5 (Israel), and A65BP (United Arab Emirates). Russians were generally somewhat weaker than western Europe, but many had good signals all the way to the UA4 area. Big guns RU1A and RL3A were well over S9! ZS1EL also called me as well as about 3 or 4 five-watt European stations. At least 3 PY stations also called in from southern Brazil. The omni-directional antenna does have a few advantages. Activity from Europe was very good even the second night when traditionally it is very slow. I also noticed that some far western USA stations were working Europe as well.

"10 meters was very interesting with marginal conditions to Europe Saturday, but OH, LY, YL, and SM were logged. There were a few loud signals from LZ, F, and EA. Stations in the Caribbean at the same time were very loud as was CR2X, and Africans 6V7S, CR3A, 3V8BB, and EA9EU all had very good signals. 15 meters around 1530Z was wide open to Europe with booming signals. Solar flux was right around 100.

"Sunday, I arrived at the perfect time around 1400Z when 10 meters was just opening to Europe. East of Poland, propagation was almost nil except for a weak R7MM, and about 3 weak Ukrainians, but I ran a big pile-up with a huge number of Germans logged and strong signals even from SM and LA. All of Europe east of Poland had good conditions to here in West Virginia at least thru 1510Z when I had to QRT. Conditions were better than would be expected with a solar flux of only 103 and K index of 2-3, simply amazing that Europe was booming in."

On February 19 Jeff wrote: "Last night February 18 (but February 19 based on universal time), T46RRC (Cuban IOTA NA-204) was on 80 and European signals calling them were down 15-20 db from the levels over the weekend. They were S9+25-30 dB on 160 Monday at 0230Z, a really awesome signal! They have been so loud that they have had no trouble putting a lot from 'mother Russia' into the log, the 17 meter op in the mornings can be heard running stations in Russian, but will switch over to English when a loud station here QRMs the Europeans."

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net.

For more information concerning radio propagation, see the ARRL Technical Information Service web page at http://arrl.org/propagation-of-rf-signals. For an explanation of the numbers used in this bulletin, see http://arrl.org/the-sun-the-earth-the-ionosphere. An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. Find more good information and tutorials on propagation at http://myplace.frontier.com/~k9la/.

Monthly propagation charts between four USA regions and twelve overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are at http://arrl.org/bulletins.

Sunspot numbers for February 14 through 20 were 25, 59, 75, 74, 92, 117, and 106, with a mean of 78.3. 10.7 cm flux was 99.5, 100.1, 103.2, 105.5, 104.7, 112.4, and 113.5, with a mean of 105.6. Estimated planetary A indices were 10, 4, 8, 8, 4, 6, and 5, with a mean of 6.4. Estimated mid-latitude A indices were 11, 3, 6, 7, 4, 5, and 6, with a mean of 6.

Source record: 248456

This past Saturday night, The Great Liberty Nit-Wit-Net opened
with . .

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Later in the evening, the discussion moved on to other topics
like ...

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Finally in the wee hours of Sunday morning, The Great Liberty Nit-
Wit- Net ended with ..

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

As usual we thank net control for providing a completely new agenda
of topics never before discussed on ham radio nets.

We take a moment to remember some of The Great Liberty Nit-Wit-Net's
old times.
Loose Orifice - gone to the happy ham shack in the sky
Dawg Peter - doing time for shooting up a deputy sheriff's car.
Chicken Fornicator - mysteriously withdrew from The Great Liberty Nit-
Wit-Net.

We also miss the voices of Sir Sidney, Kind Jewish Indian, Captain
America, N4SX in downtown Washington, DC and The Late Arky Bob.

469. Latest Liberty Net via WB4AIO

Newsgroup: rec.radio.shortwave
Date: 2013-02-24 00:23:50 UTC
From: Kevin Alfred Strom <kevin.strom@revilo-oliver.com>
Message-ID: <kgbmj5$ah8$1@speranza.aioe.org>
Source record: 248461

Liberty Net: February 16, 2013

http://3950.net/2013/02/liberty-net-february-16-2013/

by Kevin Strom, WB4AIO

LEARNING IS FUN when it involves interacting with the friendly folks on the Liberty Net, amateur radioï¿½s longest-running current events discussion net. Why not add your voice by checking in this Saturday night? Challenge a premise today!

Here are just a few of the hundreds of ideas brought up on the net this week:

ï¿½ The recent incredibly close asteroid fly-by and the meteorite impact in Russia show beyond doubt the urgent need to increase our intelligence so we have a chance of preventing the inevitable future, much larger, cosmic encounters from wiping us out. Unfortunately, the ï¿½equalityï¿½ religion, dysgenic breeding, and mass Third World immigration are instead decreasing our intelligence with each passing generation. (8 minutes)

ï¿½ One of the things that the CIA and Mossad and the like do to destabilize ï¿½enemyï¿½ countries is to do everything they can to increase ï¿½diversityï¿½ there: Increasing the numbers and power of ï¿½minoritiesï¿½ makes a country weak, makes unity impossible, and may even lead to collapse or genocide. ï¿½Diversityï¿½ is literally a weapon of war. Now consider what is being done to the United States. (14 minutes)

ï¿½ Opposing non-White immigration into our countries doesnï¿½t at all mean one dislikes or ï¿½hatesï¿½ non-White people ï¿½ thatï¿½s ridiculous. Such ï¿½hateï¿½ is mainly non-existent, a media stereotype designed to intimidate us into silence while the oligarchs commit genocide against us. (23 minutes)

ï¿½ It should tell you something about the billionaire oligarchs when you see the mega-corporations they own falling all over themselves to force the Boy Scouts to accept homosexuals. (32 minutes)

ï¿½ What is the meaning of the controlled mediaï¿½s current obsession with Abraham Lincoln? Is a war coming in which invoking Lincolnï¿½s image would be useful to gin up the boobs for the slaughter? (51 minutes)

ï¿½ A society without freedom of association is an unfree society. Freedom of association ï¿½ which necessarily includes the right not to

associate ï¿½ is a basic and necessary freedom, and it has been purposely been taken away from us. (54 minutes)

ï¿½ Depending on the Supreme Court to void the millions of unconstitutional laws is like depending on Lenin to fight Communism. (59 minutes)

ï¿½ The minions of the regime in Washington definitely donï¿½t deserve the magnificent sculpture and architecture that surrounds them. (1 hour 2 minutes)

Thanks to Marty, N2IRJ, youï¿½re able to listen to the Liberty Net on your computer ï¿½ or download the file and listen on your portable mp3 player. And he and Al, N2SAG, operate live feeds and chats during Net times (see the links in the left column of this page) that let you make an end run around jammers and a fickle ionosphere.

Please check in with your call sign, and add your voice to the most exciting net on the amateur bands ï¿½ every Saturday night, starting at 10PM Eastern Time. The frequency varies to avoid causing interference, but is almost always somewhere above 3950 kHz LSB, quite often on 3983.

Our deepest thanks go to W1WCR for his hard work and courage in running the Liberty Net, which is now in its 39th year.

I'd play with it with just the built in whip, unless you are in a
shielded building or surrounded by QRM. That is a Sangean ATS-803A and
there is a lot of info about it. Be careful when connecting long wires
to portable radios, it's easy to fry the front end of the radio.

You can obtain a reel out antenna that will plug into the antenna jack here:
http://universal-radio.com/catalog/sw_ant/3184.html
Just plug it in and reel it out. The higher you can get the antenna the better.

In the evenings you can tune in the ham radio 75 meter band 3.750-4.000 MHz
to test it out. Alos do a search for VOLMET stations on google and you can tune into
aircraft weather broadcasting and comms. 11.175 MHz is the USAF SSB aircraft frequency.

All you need is no more than 25-30 feet of wire to get the maximum out of this radio.

Depending on your signal conditions, 20 - 30 feet of wire is more
than enough. This radio is sensitive enough that your problems are going
to be more signal overload than signal deficiency. So, too much wire
will create problems. In some areas, 20 feet can be too much.
Orientation of the wire is not important in most cases, but
experimentation will determine whether there is a benefit to any
particularly

A good earth ground will help to keep noise low. As will a well
filtered and bypassed power supply.

This is actually a pretty good radio. I had the Sangean badged model,
and enjoyed it immensely.

Let's not forget the Second War for Independence which was fought on American soil from 1861 to 1865 -- in which Americans north and south lost their freedom. After all, it is utterly preposterous to posit that one can never leave a "union" or any other organization which one has joined. And it is murder to kill someone for trying to do so.

The Spanish-American war -- and America's involvement in both World Wars -- were equally stupid, and all essentially suicidal.

With all good wishes,

Kevin Alfred Strom.

```
:Product: Weekly Highlights and Forecasts
:Issued: 2013 Feb 25 0208 UTC
# Prepared by the US Dept. of Commerce, NOAA, Space Weather Prediction Center
# Product description and SWPC contact on the Web
# http://www.swpc.noaa.gov/weekly.html
#
# Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
18 - 24 February 2013

Solar activity was low. 15 C-class flares were observed throughout
the week, 13 of which originated from Region 1678 (N11, L=069,
class/area=Dkc/470 on 21 Feb). This region was numbered on 18 Feb
and quickly evolved from a beta to a complex beta-gamma-delta type
magnetic configuration. By 20 Feb, it had grown to 12 times its
original size and produced the largest flare of the week, a C8/Sf at
24/1111 UTC. Region 1678 rotated off the visible disk on 23 February
as a Dko type region with beta-gamma magnetic characteristics. Over
a dozen coronal mass ejections were observed during the week. Many
of the CMEs were associated with disappearing solar filaments. An
8-degree filament erupted near N25W18 between 0147 and 0548 UTC on
the 19th. Analysis of the associated CME suggested it had an
Earth-directed component. The largest filament eruption of the week
occurred later that day when a 41 degree long filament centered near
S22W10 left the disk between 1006 and 2310 UTC. Analysis suggested
there was no earth-directed component with that CME.

No proton events were observed at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit
remained at normal levels throughout the week.

Geomagnetic field activity was at quiet levels until mid-day on 22
Feb when major storm levels were observed at high latitudes and the
planetary K-index reached unsettled levels. The increased activity
was tied to the arrival of a geoeffective coronal hole high speed
stream, possibly coupled with a transient solar wind feature. The
unsettled conditions lasted through the first period of 23 February
after which quiet activity levels prevailed.

Forecast of Solar and Geomagnetic Activity
25 February - 23 March 2013
```

Solar activity is expected to be at very low to low levels throughout the forecast period with a slight chance for an M-class event after 10 March when Region 1675 returns.

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be at normal to moderate levels.

Geomagnetic field activity is expected to be at quiet levels through the majority of the forecast period. Unsettled levels are predicted for 01 and 21 March when recurrent coronal hole high speed streams are forecast to be geoeffective.

I wish that had been filmed in 1964, ergo that is the year I was there. http://www.114thaviationcompany.com Tan Son Nhut is actually about six something miles North of Saigon, or down town Saigon. The ammo supply point where I worked was about two something miles North of the Tan Son Nhut North gate. Google,,, Map of Tan Son Nhut. God Bless our Soldiers.

I am also one of the victims of RNM and my life has become a hell. I have lost my desire to live and have started hating life. Please have patience. We should first form a group in which all the victims of RNM should be able to communicate with each other and should put collective efforts to find a solution. I have filed a writ petition seeking an inquiry into the issue and the people who are handling me through the RNM are not allowing me to attend the court. Please call me on 09900102276 if you have come across a solution or willing to join me in finding a solution to this wretched problem.

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast
bands used outside the USA. For multi-use bands, primary usage is shown.
Some stations operate outside official bands. Information is from Oct 2008
FCC rules and Sep 2009 NTIA manual, see Chapter 4 of:
http://www.ntia.doc.gov/osmhome/redbook/redbook.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is
5 kHz. Frequencies above 10000 kHz tend to propagate better during the day;
frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area.
Telephone lines present a potential shock hazard. Do not use this antenna
for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving
antenna. Performance will vary depending on the kind of phone line you
have. Overhead lines usually make okay antennas, while underground lines
| usually don't. Phone lines carrying DSL service may be unsuitable because
| DSL operates over a wide spectrum. A phone line antenna will generally
pick up more power line noise than a dedicated antenna, so don't expect to
| use it for DX work. Nevertheless, I found that it outperformed the
| telescopic whip antennas built into many portables.

A reader sent in this suggestion: If you're concerned about connecting
the phone line directly to the receiver, try wrapping the phone cord
several times around the receiver's telescopic whip antenna instead.
Performance may not be as good as a direct connection, but it will
probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought
much about it because thunderstorms are rare in my area. Most phone lines
have lightning arrestors on them where they enter the house, but the
lightning arrestors may pass enough energy during a lightning strike
damage a receiver. My suggestion is to disconnect the antenna when not in
use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and
receiver. The capacitor eliminates all phone line voltages, including
| ringing, so that they will not harm the receiver. The capacitor should
| be rated 250 volts or higher.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be
| purchased from shortwave dealers (see below for recommendations).

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

These filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

```
| RECOMMENDED FILTERS
|
| If you don't want to make your own filters, the following have good
| performance, are well-built and affordable:
|
| Model 400 BCB interference filter (3.5 MHz highpass)
| http://www.iceradioproducts.com/filtersrf.html#bcb
|
```

| Model 420 HF lowpass filter (30 MHz lowpass)
| http://www.iceradioproducts.com/filtersrf.html#3
| (scroll down a bit to see the model 420)
|
| If you have a random-wire antenna, the following unit will provide
| impedance matching and lightning protection (connect antenna to 450-ohm
| terminal):
|
| Model 182A beverage matching unit
| http://www.iceradioproducts.com/reconly.html#Beverage Matching

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)
Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.

```
--------||---+----||-----+----||-----------
} }
{ {
} }
-------------+-----------+-----------------
```

The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB

1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

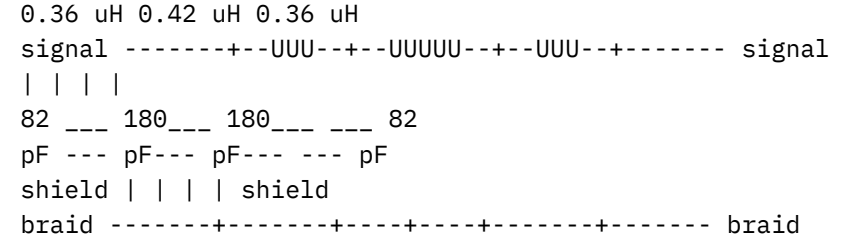
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



|
chassis ground

I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

Parts for the filters can be obtained from the following source:
http://www.digi-key.com/

Propagation Forecast Bulletin 9 ARLP009
>From Tad Cook, K7RA
Seattle, WA March 1, 2013
To all radio amateurs

SB PROP ARL ARLP009
ARLP009 Propagation de K7RA

Solar and geomagnetic activity over the past week (Thursday through Wednesday, February 21-27) declined, with the average daily sunspot number dropping nearly 21 points to 57.7. Average daily solar flux softened by 4.7 points to 100.9, and average daily planetary A index declined 6.4 points to 5.1. This isn't much of a change, but geomagnetic activity was low already, and this is even lower.

Predicted solar flux for the near term is 110 on March 1-3, 105 on March 4-7, 100 on March 8, 95 on March 9-14, 100 on March 15-16, 105 on March 17, and 110 on March 18-20. Solar flux then reaches a peak of 120 on March 25-27, and on March 28 through April 6 maintains an average around 113.

The predicted planetary A index is 12 and 8 March 1-2, 5 on March 3-4, 8 on March 5, 7 on March 6-7, 5 on March 8-10, 7 on March 11-12, and 5 on March 13-20.

OK1HH predicts quiet to active geomagnetic conditions on March 1, mostly quite March 2, quiet to unsettled March 3, quiet on March 4, mostly quiet March 5, quiet to unsettled March 6, quiet to active March 7, quiet on March 8, mostly quiet March 9-10, quiet to active March 11-12, quiet to unsettled March 13-16, mostly quiet March 17-18, quiet to unsettled March 19-21, active to disturbed March 22 and quiet on March 23-24.

It is interesting to note that OK1HH predicts active to disturbed conditions on March 22, but NOAA and USAF predict a benign planetary A index of only 5 on that date.

This weekend is the ARRL International Phone DX Contest, from March 2, 0000z to March 3, 2400z. If you are on the West Coast, and use Pacific Standard Time, that would begin at 4:00 PM on Friday, ending at 4:00 PM on Sunday. For more info, check

http://www.arrl.org/arrl-dx.

With February ended, let's look at some updated averages. Our most recent 3-month moving average does not impress. The three months centered on January 2013 had an average daily sunspot number of 73.6. This is below every three-month moving average for last year, except the three months centered on March 2012, which was 71.2. The 3-month moving averages of daily sunspot numbers centered on January 2012 through January 2013 were 83.3, 73.7, 71.2, 87.3, 91.5, 96.5, 91.9, 89.9, 81.2, 82.3, 74.4, 82.8 and 73.6.

Jim Henderson, KF7E sent a link to an impressive NASA clip of solar activity from last July. Note that you can set this video to HD resolution, and it looks great on full screen. See it at http://apod.nasa.gov/apod/ap130226.html.

Also check out the photo gallery of solar events at http://news.cnet.com/2300-11386_3-10015988.html and note the dramatic composite image number 4.

Walt Knodle, W7VS sent an article about artificial ionosphere produced by the HAARP facility in Alaska with a 3.6 megawatt signal on 69 meters. Note that they are only able to produce the effect for 45 seconds. Read about it at http://phys.org/news/2013-02-scientists-densest-artificial-ionospheric-plasma.html.

I think the Wikipedia page at http://en.wikipedia.org/wiki/High_Frequency_Active_Auroral_Research_Program gives a pretty good overview of the HAARP project.

Also the September 1996 issue of QST has a nice article by K3NS titled, "The High Frequency Active Auroral Research Program." ARRL members can find and download it from the ARRL website with a search at http://www.arrl.org/arrl-periodicals-archive-search.

Jim Smith, K3RTU operated on HF CW from Ridley Creek State Park in Southeast Pennsylvania (FM29) on February 25. He wrote, "I hooked up with EA8BVP in the Canary Islands. 'Bal' EA8BVP was using a FT-817 and a vertical, and I was using my FT-817 and my trusty Buddistick vertical. This CW QSO took place early in the afternoon on 18.086 MHz. I had been trying to make a contact on 20 meters and was having no luck so I QSYed to 17 meters and almost within minutes heard EA8BVP calling CQ. Both of our signal levels were S4 to S5. I frequently operate on 17 meter CW while out backpacking and more often than not it provides me with good long distance contacts."

It looks like the path from the park to the Canary Islands would be good in the early afternoon, with the best 17 meter signals that day from 1200-2200 UTC. 17 meters does look like a better bet, with 20 meters not catching up until after 2000 UTC.

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net.

For more information concerning radio propagation, see the ARRL Technical Information Service web page at http://arrl.org/propagation-of-rf-signals. For an explanation of the numbers used in this bulletin, see http://arrl.org/the-sun-the-earth-the-ionosphere. An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. Find more good information and tutorials on propagation at http://myplace.frontier.com/~k9la/.

Monthly propagation charts between four USA regions and twelve overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are at http://arrl.org/bulletins.

Sunspot numbers for February 21 through 27 were 75, 79, 56, 25, 59, 49, and 61, with a mean of 57.7. 10.7 cm flux was 108.5, 107, 99.6, 94.9, 95.4, 98.7, and 102, with a mean of 100.9. Estimated planetary A indices were 6, 9, 6, 3, 3, 5, and 4, with a mean of 5.1. Estimated mid-latitude A indices were 5, 9, 6, 2, 3, 4, and 4, with a mean of 4.7.

Liberty Net: February 23, 2013

http://3950.net/2013/03/liberty-net-february-23-2013/

by Kevin Strom, WB4AIO

VIC, W1WCRï¿½s antenna repairs this week brought his already continent-spanning signal back up to the continent-dominating level. Vic is the Net Control Station for amateur radioï¿½s longest-running current events discussion net, the Liberty Net.

As Spring and Summer ï¿½ and increased atmospheric static ï¿½ loom in the near future, itï¿½s good to plan transmitting antenna improvements at your station. Full-size antennas ï¿½ a full quarter wave vertical with an excellent radial system, or a half-wave or longer horizontal antenna no lower than 50 feet average above the ground ï¿½ are definitely the best. 75 meters is a highly crowded and competitive band with a high natural noise level, and compromise antennas are a poor choice for net operations.

Hereï¿½s a small sample of some of the concepts discussed on the Liberty Net this week:

ï¿½ You know itï¿½s really getting bad when Federal Reserve officials themselves are warning that Bernankeï¿½s ï¿½QE Infinityï¿½ policy, and the unsaleable debt itï¿½s based on, threaten the solvency of the ï¿½fail proofï¿½ central bank. (11 minutes)

ï¿½ The bankers can easily make it look like the ï¿½sequesterï¿½ causes huge economic problems ï¿½ and thereby get the kind of budget agreement they want (one that creates more and more debt and more interest payments to them, natch) ï¿½ just by turning down their money creation spigots for a few days. (38 minutes)

ï¿½ Is this recent ï¿½kill the zombiesï¿½ meme being aggressively propagated to inure us to the killing of the disheveled, injured, migrating, desperate people who might be present after the System collapses? (44 minutes)

ï¿½ Returning veterans who are classified as suffering from ï¿½battle fatigueï¿½ ï¿½ and who wouldnï¿½t, after being forced to commit atrocities on innocents ï¿½ are now being notified that they have ï¿½forfeitedï¿½ their Second Amendment rights. Watch the video ï¿½The Battle of Athensï¿½ to find out why. (49 minutes)

ï¿½ Decent people sympathize with the innocent Muslims who stayed home in their own countries and who are being slaughtered by Israel and

America in the Middle East. But is it a good idea to allow millions of angry Muslims free entry into the US? ï¿½ or to permit them to set up paramilitary training camps here? (1 hour 3 minutes)

ï¿½ Whenever you want to know what the oligarchs are planning, watch for Democrats and Republicans pushing through legislation together. Recently, a number of bills have been quietly passed facilitating an EU-US financial merger, which would drive the hooks of debt even deeper into the American people. (1 hour 7 minutes)

ï¿½ Italyï¿½s Berlusconi is hated by the oligarchs, in part because he is a good friend of Vladimir Putin ï¿½ and the oligarchs really hate Putin, who put several of their number in jail. (1 hour 10 minutes)

ï¿½ Again and again and again, over many decades, the productive White people of America have funded new housing for the underclass, at the insistence of the financial elite, and again and again and again, this housing has been destroyed by its inhabitants. Again and again and again, over many decades, the banking elite have extracted interest (on money they created out of nothing) from the productive White people of America ï¿½ in order to build their chalets in Switzerland and their mansions in the Cayman Islands and the like ï¿½ and this fraudulent theft of our wealth accelerates daily and the greed of the elite ever increases. (1 hour 32 minutes)

Remember, you can actually participate in these Liberty Net discussions by checking in Saturday nights at 10 pm Eastern Time, somewhere above 3950 kHz on the 75 meter ï¿½phone band, or by logging on to one of the live streams right here at http://3950.net/ or at N2SAGï¿½s Ustream page, linked in the left column of our site. See you on the air!

515. Latest Great Liberty Nit-Wit-Net via WB4AI0 .

Newsgroup: rec.radio.shortwave
Date: 2013-03-03 01:33:47 UTC
From: Keven Albert Strum <WB4AI0@yahoo.com>
Message-ID: <46468540-913d-45a3-8f26-e9eaba6db9fd@5g2000yqz.googlegroups.com>
Source record: 248507

This past Saturday night, The Great Liberty Nit-Wit-Net
opened with . .

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Later in the evening, the discussion moved on to
other topics like ...

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Finally in the wee hours of Sunday morning, The Great
Liberty Nit- Wit- Net ended with ..

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

As usual we thank net control for providing a completely new agenda
of topics never before discussed on ham radio nets.

We take a moment to remember some of The Great Liberty
Nit-Wit-Net's old times.
Loose Orifice - gone to the happy ham shack in the sky
Dawg Peter - doing time for shooting up a deputy sheriff's car.
Chicken Fornicator - mysteriously withdrew from The Great Liberty
Nit-
Wit-Net.

We also miss the voices of Sir Sidney, Kind Jewish Indian, Captain
America, N4SX in downtown Washington, DC and The Late Arky Bob.

See you next week for a refreshing new update.

# Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
25 February - 03 March 2013

Solar activity was very low for most of the week, with only B-class
flares observed. The majority of the B-class activity was split
between Regions 1682 (S18, L=299, class/area=Dai/240 on 01 Mar) and
1683 (S16, L=202, class/area=Eai/210 on 02 Mar) both of which
developed beta-gamma magnetic characteristics during the week.
Activity increased to low levels on 02 Mar, when Region 1687 (N06,
L=166, class/area=Cro/30 on 03 Mar) produced a C1 flare at 1511 UTC
and again at 1847 UTC. All three of the regions mentioned remain on
the visible disk at the time of this report.

A greater than 10 MeV proton enhancement was observed from a long
duration B9 flare which occurred on 25 Feb at 1151 UTC and was
attributed to old Region 1678 (N11, L=069) which had rotated around
the West Limb two days earlier. The proton flux enhancement began on
27 Feb, reached a peak of 0.995 pfu at 28/0440 UTC, and returned to
background levels early on 01 Mar.

The greater than 2 MeV electron flux at geosynchronous orbit was at
low to moderate levels until 02 Mar when it rose to 3800 pfu in
response to the arrival of a significant coronal hole high speed
stream. Flux remained at high levels through the end of the period.

Geomagnetic field activity was quiet for most of the week. However,
on 28 Feb around 15-17 UTC, a corotating interaction region (CIR)
and subsequent high speed solar wind stream (HSS) became
geoeffective. Solar wind speed which had been in the mid 300 km/s
range began rising and eventually peaked at 675 km/s early on 02
Mar. Bt rose to 18 nT by 01/0817 UTC while Bz ranged from +14 to -16
nT. The Phi angle shifted from a positive (away) orientation to a
negative (towards) orientation. The magnetosphere responded with
unsettled levels late on 28 Feb. Geomagnetic activity quickly
climbed to active levels for most of 01 Mar, punctuated by one
```

period of minor storm levels during the 09-12 UTC synoptic period. This response was no doubt exacerbated by the favorable orientation described by the Russel-McPherron effect. Solar wind speed declined abruptly between 02/11-15 UTC, dropping from about 590 to around 480 km/s, then began a slow decline back to around 400 km/s by the end of the week. After an active first period on 02 Mar, the remainder of the week saw quiet to unsettled activity levels.

Forecast of Solar and Geomagnetic Activity
04 March - 30 March 2013

Solar activity is expected to be very low to low with a slight chance for an isolated M-class event. The threat of an M-class flare is most probable between 11 and 23 Mar with the return of old Region 1675.

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to begin the period at high levels in response to the continued presence of a recurrent coronal hole high speed stream but decline to normal to moderate levels after 06 Mar. High levels are possible again in the last day of the forecast period with the return of a recurrent coronal hole high speed stream.

Geomagnetic field activity is expected to be predominantly quiet to unsettled. Active periods are possible on 28 March with the return of a recurrent coronal hole high speed stream.

It does seem that way. I don't know if that's the right strategy,
though -- and it sure isn't one I'd want to subject my children to.

The writer H. Millard has talked about the issue here:

http://theamericanmercury.org/2013/01/the-eagle-and-the-cockroach/

With my best,

Kevin, WB4AIO.

539. Boom Box Radio (pirate)

Newsgroup: rec.radio.shortwave
Date: 2013-03-07 01:01:50 UTC
From: hallicrafter@collins.net
Message-ID: <ufpfj8tqn4q6jk2jn2fa9anbta4134f4o7@4ax.com>
Source record: 248531

Boom Box Radio - 6937.9 kHz AM - DJ with rock music format 0010 UTC -
Best on LSB due to utility on upper side. Fair signal.

Shut down on 6938 kHz. Moved to 6949.5 kHz with better signal 0059
UTC. Same utility interference nearby.

Jim (MI)

540. Re: CHKN Radio (pirate)

CHKN Radio on 6925.5 kHz AM strong signal at 2315 UTC. Mention of
Benton Harbor. Stuff from Super Chicken. Still going 2328 UTC.

Jim (MI)

Sure it wasn't from Chicken Man (whose real identity was Benton Harbor) ?

541. Is the REDSUN PF2100 still popular? If not, what?

Newsgroup: rec.radio.shortwave

Source record: 248533

I got interested in multi band radio and got a Grundig/Eton E5. Great radio but couldn't find interesting stuff to listen to so used it to get distant FM, great.

But now the speaker rattles. Another popular choice back then was the REDSUN PF2100. Is that radio still popular or available?

Or what, for around a 100 dollars, would be a good radio in its place?

Thanks
Jim

542. Seeking New FAQ/Intro Maintainers for rec.radio.shortwave

radio/monitoring/shortwave-faq
Subject: Welcome to rec.radio.shortwave (Shortwave)
Maintainer: ralph@cbnews.cb.att.com (Ralph Brandi)
Last Posted: 28 Jun 1996 00:09:45 GMT

We have been informed by the readers of rec.radio.shortwave that a |
recent (2008) attempt to update these documents and post them (or links |
to them) at regular intervals, has since been abandoned, so the project |
is once again open to a sincere and motivated volunteer. |

We are interested in offering any technical support necessary to get
these articles updated and automatically posted again at regular
intervals. This would include establishing contact with the original
maintainers for any necessary permissions. We would prefer to seek new,
dedicated maintainers at this time, rather than start auto-posting the
original articles ourselves.

For more information about our newsgroup, see:
```

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

I actually own the entire set of Chicken Man, including all the PSA's.
Bought it from the owners of the copyright. I was disappointed, however,
that NOT included in the set were the intro and extro.

I asked them at one point how much a license to netcast the episodes on my
Live365 station, and they quoted me a ludicrous $1000 per run, or something
like that. That's more than it costs me to run the station for 4 years, and
that includes paying all the per play royalties of my music! If I had more
than a mere handful of listeners (I can count them all on one hand), I might
consider it.. but this is a hobby for me, I make zero (about -$550/yr,
including the electricity to run it) on it.

You are right. Part about Benton Harbor was from Chicken Man. I
believe he also played the clucking from Super Chicken.

That reminded me of the other cartoon in that series - Tom Slick -
great theme song.

ARLP010 Propagation de K7RA

ZCZC AP10
QST de W1AW
Propagation Forecast Bulletin 10 ARLP010
>From Tad Cook, K7RA
Seattle, WA March 8, 2013
To all radio amateurs

SB PROP ARL ARLP010
ARLP010 Propagation de K7RA

The averages of daily sunspot numbers and solar flux over the reporting week (February 28 through March 6) both rose, with sunspot numbers up nearly 36 points to 93.3 and solar flux up nearly 12 points to 112.6, in comparison to the previous seven days. The most active geomagnetic day was Friday, March 1, when the planetary A index was 27 and the mid-latitude A index was 23. Alaska's high latitude college A index was a whopping 64. The upset was sparked by a stream of high speed solar wind.

The latest forecast from NOAA/USAF puts average solar flux for the next five days (March 9-13) at 118.2, higher than average solar flux for the reporting week, which was 112.6.

Predicted solar flux is 112 and 118 on March 8-9, 120 on March 10-11, 118 on March 12, 115 on March 13-14, 105 on March 15, 95 on March 16-17, 100 on March 18-20, 105 on March 21-24, 110 on March 25 through April 1, and 105 on April 2-5.

The predicted planetary A index is 8 on March 8, 5 on March 9, 8 on March 10-12, 5 on March 13-20, 8 on March 21, 5 on March 22-27, then 18, 10, 5 and 10 on March 28-31 and 8 on April 1-4.

F.K. Janda, OK1HH predicts quiet geomagnetic conditions on March 8-9, mostly quiet March 10-11, quiet to unsettled March 12, quiet to active March 13, quiet on March 14, quiet to unsettled March 15-17, quiet on March 18, mostly quiet March 19-20, active to disturbed March 21-22, quiet March 23-24, mostly quiet March 25, quiet March 26-27, quiet to active March 28-30, and quiet to unsettled March 31.

Have we mentioned recently that for HF propagation, we generally want higher sunspot numbers but low geomagnetic indices at the same time?

At http://solarscience.msfc.nasa.gov/predict.shtml you can see the latest NASA solar cycle prediction. They revised the forecast downward again. Last month they said that the cycle should peak this Fall with a smoothed sunspot number of 69. That was revised down by three points, and now they say it will peak at 66. These are International Sunspot Numbers, which have a lower scale than the Boulder numbers we use in this bulletin, which run about 35% higher.

Many readers wrote in concerning the news about a possible double-peak for the current solar cycle. There seemed to be a peak in activity around the end of 2011, then activity fell off last year. If true that the cycle peaks this Spring or Fall, we don't seem to be trending toward that activity yet.

Check http://www.youtube.com/watch?v=6j4bl57D_1U for a video from NASA explaining this. Note you can watch the video in HD and full screen by selecting options at the bottom.

Thanks to John Campbell, K4NFE, Elwood Downey, WB0OEW, Gary Johnson, K5SWW, and David Dary, W5ZAX, for the tips on the story.

If you go to http://www.swpc.noaa.gov/weekly/pdf/prf1957.pdf for the latest Preliminary Report and Forecast and turn to page 15, you can check the numbers for the latest prediction from Boulder. It shows a peak in September and October 2013, with levels about 27% higher than solar activity last month, February 2013.

See also that the peak in activity at the end of 2011 is represented by the higher numbers (smoothed, so the peak is not pronounced), then gradually declining. The averaging function seems to have moved that peak out to February and March of 2012. But the predicted peak this year is quite a bit higher than the previous peak. Let's hope that the second peak is indeed much more robust, as predicted.

At http://www.swpc.noaa.gov/weekly/pdf/prf1953.pdf the forecast from last month shows higher values for the end of 2012 and the first few months of 2013. These reflect estimated future sunspot numbers, which would drag the average down. The numbers for each month are an average for a year's worth of data, six months forward, and six months back. The estimate for March 2013 went from 77 last month to 73 this month. The latest figure represents one more month of real recorded data than last month's prediction.

Note also on the next page that the solar flux prediction shows the peak for that parameter in August 2013.

Julio Medina, NP3CW of San Juan, Puerto Rico wrote, "Just to let you know that today 01 March 2013 from 1826-1837z I worked VU3WIJ and VU3WII on 20 meter SSB with 5x9 reports both way. I was using a vertical antenna at ten feet above the ground and 100 watts. Both stations had pile ups and they copied my signal very easily."

I replied, "On that day I would expect the band to just begin to open at that time, but signals should reach a peak from 2100-2300z."

Steve Hawkins, NG0G wrote: "On March 5 at 2213Z I had just worked TX5K (Clipperton Island) on 24 MHz CW. I live in Boone Iowa and it was getting on toward late afternoon." (See http://www.tx5k.org/ for the Clipperton DXpedition.)

"After working TX5K I stumbled across XT2TT (Burkina Faso) on the same band. Since by then it had been dark in Africa for hours I was very skeptical and thinking pirate. But I adopted the standard 'Work now, worry later' mode.

"I'll admit it took tweaking everything built into my FT-1000 MKV Field, and listening so hard there may have been arcing inside my skull, but I could hear them. I called and worked them about the 3rd call. At first I thought 'noooooooo, this must be a pirate,' as with my wimpy vertical, and the solar flux as low as it is, 24 MHz should not be open to Africa from Iowa at 2213Z. I was astounded when not only did they answer me, but I quickly showed up in their online log.

"I could almost hear http://www.youtube.com/watch?v=NzlG28B-R8Y (cue the Twilight Zone theme music.)

"Despite feeling like the guest on a certain late night talk show, I quickly launched into my best post-back surgery version of the 'Happy Dance.'

Talking later with a friend, K0KT, he reminded me that near to the equator, the MUF can be surprisingly high up to midnight."

Actually when running the numbers on W6ELprop, propagation over that path at that time on that band is not unusual. I entered 42.07 degrees North, 93.88 degrees West for Steve's location, and found the XT2TT DXpedition QTH at, http://www.i2ysb.com/idt/index.php?option=com_content&view=featured&Itemid=101.

That page shows a grid square location of IK92fi, so I entered this into the AMSAT grid square conversion tool at http://www.amsat.org/cgi-bin/gridconv.

This yielded 12.3542 degrees North, 1.54167 degrees West for XT2TT. This turns out to be only 25 miles north of the default Burkina Faso coordinates in W6ELprop.

Based on these coordinates, the station is in the southwest portion of Ouagadougou, Burkina Faso's capitol city. I checked this at 4:17 AM Seattle time today, which is 12:17 PM in Burkina Faso and also 1217z. The temperature was 102 degrees F with humidity of only 11% in Ouagadougou. The annual rainfall there is only 35 inches, and the high temperatures between March and May reach 113 degrees F.

The path length is 5,767 miles (9,281 km), and on March 5 W6ELprop shows an opening beginning with a B rating (available 50-75% of the time) and signal-to-noise ratio of 40 dB at 1330z, changing to an A rating (opening 75-100% of the time) by 1430z. By 1830z the s/n

ratio is 43 dB and it gradually increases to a peak of 48 dB at 2300z. Signals stay at that level, but availability degrades to a B rating at 2330-0000z, C rating (25-50% availability) at 0030z and D rating (1-25%) at 0100-0130z.

Sunset at XT2TT was 1812z on March 5, and at NG0G it was 0006z. So that path opens about 45 minutes after sunrise at NG0G (1248z), gets better after sunset at XT2TT, and finally begins fading around sunset at NG0G. A half hour after sunset in Iowa, that path is done.

For more info on using W6ELprop, see references at the bottom of this page, or check http://www.arrl.org/files/file/Technology/propagation/W6elprop.pdf. You can download W6ELprop at http://www.qsl.net/w6elprop/.

Ken Miller, K6CTW of Rancho Cucamonga, California wrote, "I was up late last night working on the computer and saw that the Clipperton DXpedition was operating on 80 meter CW near the bottom end of the band. Just to satisfy my curiosity I turned on the 1960s station I've restored (Heathkit DX-60 with homebrew DDS-VFO and Drake 2-B receiver with 2-BQ Q-Multiplier feeding an inverted-vee dipole antenna) to see what I could hear. (Ken runs the old Novice power limit on this rig, just as he did on the same setup in 1967, 75 watts, or about 40-45 watts out.) Their signal here in Southern California was 20 over S-9 or better so I loaded up the DX-60 and gave a call after figuring out where the operator was listening (he was running JAs). Imagine my amazement when he came back to my call! I am always impressed that the operators at these DXpeditions can sort out a weak signal like mine out of the unbelievable racket. Thanks to them and also, what a surprise to see how good communications can be on the low bands late at night."

Ken wrote in a subsequent email: "I've restored this first DX-60 (and a Drake 2-B and 2-BQ Q-Multiplier) to get my feet wet. I am now in the process of rebuilding another DX-60 kit with all new parts. I re-plated the chassis and all the metal, and I've added an OA2 voltage regulator tube to the power segment of the 6CL6 oscillator section. That will prevent chirp on 10 meters.

"The VFO is a home brew DDS unit using the now 'retired' FCC-1 and FCC-2 from The NorCal QRP Club. For details, check the April or May issue of Electric Radio as Ray is publishing an article I wrote about my experience.

"I'm also home-brewing another improved version VFO using Jim, WA1FFL's DDS unit. This one is a significant upgrade to the unit described in the article."

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net.

For more information concerning radio propagation, see the ARRL Technical Information Service web page at

http://arrl.org/propagation-of-rf-signals. For an explanation of the numbers used in this bulletin, see http://arrl.org/the-sun-the-earth-the-ionosphere. An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. Find more good information and tutorials on propagation at http://myplace.frontier.com/~k9la/.

Monthly propagation charts between four USA regions and twelve overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are at http://arrl.org/bulletins.

Sunspot numbers for February 28 through March 6 were 63, 88, 90, 115, 103, 106, and 88, with a mean of 93.3. 10.7 cm flux was 105.5, 112.5, 111, 112, 114.3, 118.4, and 114.3, with a mean of 112.6. Estimated planetary A indices were 7, 27, 12, 7, 4, 4, and 3, with a mean of 9.1. Estimated mid-latitude A indices were 8, 23, 14, 6, 4, 3, and 4, with a mean of 8.9.

Liberty Net: March 2, 2013

http://3950.net/2013/03/liberty-net-march-2-2013/

by Kevin Strom, WB4AIO

THE PUBLISHER of a disaster preparation handbook checked into the Liberty Net this week to get information on the netï¿½s operations for inclusion in his book ï¿½ stating that in a disaster situation the net might be the only way for some people to get accurate information. We appreciate the interest ï¿½ keep on spreading the word!

Hereï¿½s a selection of some of the commentary and questions put forth during this weekï¿½s Liberty Net session:

ï¿½ Cheap-labor-exploiting Republicans and banker-owned Democrats are united in demanding the legalization of the Mestizo invasion of the United States ï¿½ and whenever these gangs of criminals are united, you know itï¿½s bad for us. (15 minutes)

ï¿½ The doctrine of human equality is a preposterous ï¿½ and murderous ï¿½ doctrine, and absolutely incompatible with freedom and self-determination. It truly is as Richard Cotten once said: ï¿½Free men are not equal; and equal men are not free.ï¿½ (31 minutes)

ï¿½ As the Washington regime explodes its bank debt at an exponential rate, how long will it be before they cannot even make the interest payments (to say nothing of the principal, which hasnï¿½t been paid down for the better part of a century) without taxing all of us at a rate of 100%? And how long before that will the people rebel at being taxed to pay bankers for money the bankers created with a single stroke of a pen? (41 minutes)

ï¿½ Colleges are now accepting grants to train their students how to spy on and murder people with drones. As more and more intelligent Americans learn how their talents and brains are being used for evil purposes by the Washington regime, at what point will they begin to refuse employment with that regime, its military, and its ï¿½defenseï¿½ contractors? (1 hour 4 minutes)

ï¿½ The neocon murderers at Stratfor and the Bank of America, through their surrogates in the ï¿½Justice Department,ï¿½ are trying to put a young man in jail for 100 years for simply posting a link in an Internet forum. (1 hour 13 minutes)

ï¿½ The Washington regime has killed more people than all of the worldï¿½s other tyrants in history combined: time to wake up and stop

working for it or supporting it in any way. (1 hour 19 minutes)

ï¿½ Simple, inexpensive home lasers can be used to disable and even permanently damage drone aircraft. Never trust a politician who supports ï¿½lawsï¿½ which make that illegal ï¿½ sadly, practically all of them do. (1 hour 25 minutes)

ï¿½ Why do we need a regime that jails and tortures people who want to ingest drugs without an expensive prescription? Isnï¿½t it the job of families to teach their own children to stay away from dangerous substances? And if a few want to remove themselves from the gene pool through severe drug abuse, isnï¿½t it better just to let them ï¿½ instead of creating a society thatï¿½s like one giant prison? Even if I did decide I needed someone to protect me from drugs, it sure wouldnï¿½t be the criminals in Washington! (1 hour 45 minutes)

Remember that you can receive the Liberty Net in the area of 3950 kHz and above every Saturday night at 10PM Eastern Time ï¿½ or listen live on the Internet (see the two ï¿½Liberty Net Liveï¿½ links in the left column of this site for two live streaming sites with associated discussion rooms). And you can listen at your leisure via the mp3 files posted here at http://3950.net every week. Each Saturday nightï¿½s mp3 file is usually posted on the next morning ï¿½ Sunday ï¿½ and will be visible that day in the upper right column of this site.

Once again, thanks to W1WCR for running this important and historic discussion net ï¿½ now in its 39th year ï¿½ and thanks also to N2IRJ for making these recordings available.

```
:Product: Weekly Highlights and Forecasts
:Issued: 2013 Mar 11 0413 UTC
# Prepared by the US Dept. of Commerce, NOAA, Space Weather Prediction Center
# Product description and SWPC contact on the Web
# http://www.swpc.noaa.gov/weekly.html
#
# Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
04 - 10 March 2013

Solar activity ranged from very low to moderate levels. A majority
of the week was dominated by very low levels with only B-class
events observed on 04, 06 and 08 - 10 March. Activity increased to
moderate levels on 05 March when Region 1686 (S13, L=263, class/area
Dac/140 on 06 March) produced an impulsive M1/Sf flare at 05/0754
UTC. Associated with this event were weak, low frequency radio
emissions including a Type II signature with an estimated shock
velocity of 1011 km/s. Later on 05 March, this region produced a C1
event at 2044 UTC as well as another C1 event at 08/1644 UTC as it
rotated off the visible disk. The other spotted regions on the disk
were quiet and stable through the period. No Earth-directed CMEs
were detected during the week.

No proton events were observed at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit was at
high levels 04 - 08 March, reaching a peak flux of 7905 pfu at
06/1925 UTC. Flux levels decayed to moderate levels on 09 - 10
March.

Geomagnetic field activity was at predominately quiet levels with an
isolated unsettled period observed at 05/0000 - 0300 UTC. Solar wind
speed, as measured at the ACE spacecraft, ranged from a high of
about 500 km/s early on 04 March and exhibited a slow, steady decay
in speed through the week, ending the period near 340 km/s. Total
field measurements ranged from 1 nT to 9 nT while interplanetary
magnetic field Bz ranged between +/- 5 nT. The Phi angle began the
period in a mostly negative (towards) orientation through about
06/0800 UTC. Through the remainder of the period, field orientation
was variable, shifting from negative to positive (away).

Forecast of Solar and Geomagnetic Activity
11 March - 06 April 2013
```

Solar activity is likely to be low through the period. A slight chance for M-class activity exists through 16 March while Region 1689 remains on the disk, and again from 21 March - 03 April with the return of old Region 1686 (S12, L=263).

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be at normal to moderate levels through 28 March. Moderate to high levels are possible from 29 March - 04 April with the return of a recurrent coronal hole high speed stream (CH HSS). Normal to moderate levels are expected for the remainder of the period.

Geomagnetic field activity is expected to be predominately quiet to unsettled. Active periods are possible on 28 March due to CH HSS effects.

SB PROP @ ARL $ARLP011
ARLP011 Propagation de K7RA

ZCZC AP11
QST de W1AW
Propagation Forecast Bulletin 11 ARLP011
>From Tad Cook, K7RA
Seattle, WA March 15, 2013
To all radio amateurs

SB PROP ARL ARLP011
ARLP011 Propagation de K7RA

Solar indicators were mixed this week, with the average daily sunspot number down 8.4 points to 84.9, but average daily solar flux up 5.9 points to 118.5. Geomagnetic indices were much quieter, with the average planetary A index down 4.7 points to 4.4, and the average mid-latitude A index down 5 points to 3.9. The main reason for this is there weren't any active days this week, such as March 1-2 in the previous week's report.

The predicted solar flux for March 15-17 is 120, then 115 on March 18-19, 110 on March 20, 105 on March 21, 95 on March 22-24, 100 on March 25-26, 105 on March 27, 110 on March 28-31, 115 on April 1-3, then solar flux peaks around 120 on April 4-11. This prediction for solar flux at 120 on April 4-11 is fairly recent, first appearing in the March 11 forecast. Prior to that date, values were predicted around 100-105, and back before February 25, 95 was the predicted level. The predicted March 15-17 flux value of 120 is also recent. On March 6 the predicted values were 95 for that period.

The average of predicted solar flux for the next five days, March 15-19 is 118, right around the average of 118.5 for the past reporting week, March 7-13.

The predicted planetary A index on March 15-16 is 17 and 12, indicating more geomagnetic activity similar to March 1-2. The predicted planetary A index is 5 on March 17-20, 8 on March 21, 5 on March 22-27, 18 and 10 on March 28-29, and 5 again on March 30 through April 16.

OK1HH predicts the geomagnetic field will be active to disturbed on March 15, quiet to unsettled March 16-17, mostly quiet March 18, quiet to unsettled March 19-21, active to disturbed March 22, quiet to active March 23, quiet March 24-25, mostly quiet March 26, quiet

to active March 27-28, quiet to unsettled March 29-30, mostly quiet March 31, and quiet on April 1-4.

At 0600 UTC on March 15 the Australian Space Forecast Centre reported that a sudden impulse of 22 nT was detected in magnetometers at 0527 UTC. Due to a CME, increased geomagnetic activity is predicted on March 15-16. Minor storm periods at high latitudes are possible.

The coronal mass ejection and M1 class solar flare were from sunspot group 1692, right in the center of the visible solar disc viewed from Earth, and was Earth-directed.

In recent online articles about a possible two-peak Cycle 24, they were talking about the peak in late 2011 and another in 2013. But I noticed recently that solar physicist Dean Pesnell of NASA is suggesting a peak in late 2013 and another in 2015. Check the last line of the first paragraph of this article posted yesterday on the ARRL website:
http://www.arrl.org/news/solar-cycle-24-may-have-double-peaks-says-nasa-solar-physicist.

Robert Elek, W3HKK sent these observations about the TX5K operation on Clipperton Island:

"Kudos to the ops at TX5K! And to their nifty web site. I love the world map, spotting of call signs, almost instantaneous log updates, QSO totals, etc. It lets you see the propagation on a visual basis, call by call.

"I had not realized TX5K was on the air until, during our club effort at WW8OH for the ARRL SSB DX Contest on March 2-3, we worked them. Post-contest, and after catching up on my sleep Sunday night and most of Monday, I turned on the rig, right after dinner, and TX5K was EVERYWHERE, with big sigs! I worked them on 12, 15, 17, 30, 40 and 160 meters, many bands on both SSB and CW, during an amazing three hour stretch of operating!

"The station here is modest: 100 watts to an assortment of single band ground planes, and an inverted L for 160m. Working them so quickly, often on the very first or second call, was mind-blowing. Their pile-ups were HUGE. It had to be a miracle of good timing, plus a little experience to boot.

"I have since worked them on 160 thru 10m. Great job by TX5K! Thanks, guys!"

For a peek at the vertical antennas at W3HKK, click the photo on the upper right on his QRZ.com page at http://www.qrz.com/db/W3HKK. Note you will have to log in, but accounts are free.

Brian Alsop, K3KO of Henderson, North Carolina commented that "DXers shouldn't overlook VOACAP while chasing new ones." He sent a couple of circuit reliability plots from his location to ZL9CI and 9M4SLL

on Spratly, and noted that the times he worked them lined up with the predictions. "I recently downgraded to 500 watts, a 2 element tri-bander at 40 feet and rotary dipole for 30/17/12 at 42 feet. I need all the help I can get. Besides the DX cluster, knowing what paths at what time may be possible helps."

K9LA has a tutorial on the ARRL web site for using VOACAP, and you can see it at http://www.arrl.org/files/file/Technology/propagation/Voacap.pdf.

Finally, at http://stevemorse.org/jcal/latlon.php is a handy tool for converting a street address into latitude/longitude coordinates. This is useful for determining locations for propagation prediction and other programs based on FCC database address records, or for your own location.

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net.

For more information concerning radio propagation, see the ARRL Technical Information Service web page at, http://arrl.org/propagation-of-rf-signals. For an explanation of the numbers used in this bulletin, see http://arrl.org/the-sun-the-earth-the-ionosphere. An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. Find more good information and tutorials on propagation at http://myplace.frontier.com/~k9la/.

Monthly propagation charts between four USA regions and twelve overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are at http://arrl.org/bulletins.

Sunspot numbers for March 7 through 13 were 80, 59, 63, 89, 105, 95, and 103, with a mean of 84.9. 10.7 cm flux was 113.8, 115, 116.2, 119.2, 119.7, 123, and 122.9, with a mean of 118.5. Estimated planetary A indices were 4, 3, 6, 4, 5, 5, and 4, with a mean of 4.4. Estimated mid-latitude A indices were 2, 3, 6, 3, 4, 6, and 3, with a mean of 3.9.

> Who is Roger Leo Wiseman, AB8MQ (ex KC8JBO)?
>
> We received several requests from users of NimBusters.org and
> Rec.Radio.Amateur.Policy, asking us to publish a page about Roger Leo
> Wiseman, AB8MQ. NimBusters is a board known for racism, filth, and
> pictures of she-males (transvestites) and men engaged in homosexual
> acts. Most of the aforementioned is posted by Wiseman, according to
> users.
>
> Here is a typical page from the Nimbuster's Ham Board, in September,
> 2012, where users have indicated that Roger Wiseman is under the
> influence of Crystal Meth as he discusses child porn, and various
> homerotic acts. The ham radio portion of the site is frequented by Todd
> Daugherty (N9OGL), Roger Wiseman (AB8MQ), Karol Madera (VE7KFM), Joe
> Italiano (N0WOP), Brent Hamm (DeLorean), Lloyd Davies (TimeLORD), and
> Mark Morgan, (KB9RQZ).
>
> Daugherty has used the chat board to post death threats, "TodCasts," and
> animated images of children being raped and tortured. According to
> users, Wiseman uses all of their callsigns and pseudonyms
> interchangeably, for reasons only Wiseman can explain.
>
> There are very few rules on the NimBusters board and chaos is the norm.
> A site called Upstanding Citizens discusses the board and Woger in a
> thread titled "Nimbusters: The Good, the Bad, the Imprisoned, the
> Psychotic" here and here.
>
> You can read more about Karol Madera's friend Roger Wiseman at the
> following sites: http://woger__tracker.blogeasy.com and
> http://whywogersucks.blogspot.com; and the following newsgroups: *
> rec.radio.amateur.policy; * alt.asshole.roger-wiseman; *
> alt.cocksucker.roger-wiseman; * alt.fag-lamer.roger-wiseman.chucklehead;
> * alt.fan.fatassed.woger.wiseman-dicksucker; * alt.idiot.roger-wiseman;
> * alt.pedophile.roger-wiseman; *
> alt.binaries.pictures.erotica.gaymen.ab8mq; * alt.fan.AB8MQ
>
> NimBusters is a site where pretty much anything goes and no one is
> banned. This explains the attraction for Morgan, Daugherty, Madera, and
> Italiano, who are all banned from using "normal" ham radio chat boards
> like QRZ.com. According to individuals at NimBusters, Roger or "woger"

> as he's known, is an obsessive Internet stalker who's cooperated with
> Karol Madera by sending Madera various items used in the ongoing effort
> to defame complainants in the K1MAN case.
>
> According to one writer, "Woger is Karol's investigator, which is funny,
> considering neither numbskull has enough credibility to get a loan for a
> pair of shoes." These folks maintain that Woger has stalked or harassed
> Lloyd Davies, Dave Heil, Leila Heil, Steve Tunder, Geno Paris, Ray
> Chason, Todd Daugherty, Mark Morgan, Gavi Morgan, Bryan Reo, and several
> others, over the course of 20 years, more or less.
>
> Note: All of the information on this page was previously published at
> the Nimbusters.org ham chat board and/or on USENET, and/or elsewhere, as
> seen on the sites above and below and we've provided several links for
> your convenience, but this is by no means an exhaustive list.

> Dear Officer
>
> In answer to your recent letter concerning Mister Wiseman, you are
> correct. Our Department has knowledge of this person and we have had
> limited contact with him.
>
> We are aware of several complaints concerning Mr. Wiseman and we are
> well aware of the comments he has made about myself and two of my
> officers. Mr. Wiseman has been a person of interest for several years.
> Yes, we did once ask Mr. Wiseman to appear at our office for an
> interview, which he did. Mr. Wiseman seemed to be extremely confused and
> a bit disoriented.
>
> Yes, you are correct in that Mr. Wiseman did indeed have a panic attack.
> I became concerned enough that I did call for medics to come to the
> scene. I was concerned that he might have been suffering a cardiac
> arrest. I thought that for a minute there that we were going to lose
> him.
>
> I cannot further advise you of Mr. Wiseman's medical condition. As you
> know, that is confidential information between Mr. Wiseman and the
> physician who treated him. And please feel free to keep me up to date
> concerning any future comments that Mr. Wiseman might have to say about
> me or my officers.
>
> You have my office phone number. If I am unavailable, my cell number is
> [redacted].

> More FCC problems Woger?
>
> GLENDALE, WV: The FCC sent a Warning Notice November 9, 1999, to General
> licensee Woger L. Wiseman, KC8JBO, citing evidence that the licensee had
> been "deliberately and maliciously interfering with the radio operations
> of other licensed amateurs" on 20 meters. "This interference has
> occurred at various times in the last several months and includes
> broadcasting music and other unidentified transmissions," said a letter
> from FCC Special Counsel for Amateur Radio Enforcement Riley
> Hollingsworth. Hollingsworth warned that continued operation of the type
> described could result in a fine or license revocation proceeding, and
> he requested that the licensee contact him to discuss the allegations.

> Getting this interview wasn't easy. I knew Woger's ex-wife from the
> files I was sent from Casebreakers. I had her address 'on release' from
> prison which was listed as:
>
> REGINA G. WISEMAN
>
> 410 COUNTY ROAD
>
> KEY WEST, FL 33040
>
> Woger's other relatives, Feirntarr and Melissa Wise from Orlando and
> Mattie Edwards from Orlando, Atlanta, and East Point, GA, would rather
> not talk about Woger.
>
> So back to Regina. From that address, I sent a snail mail letter which
> Regina finally answered after a long delay. I found out she was again in
> trouble and in a court ordered halfway house for drug offenders (Regina
> has asked me not to post the address to the Internet, she doesn't want
> Woger finding out where she is).
>
> After corresponding with her for several letters, I gave her my phone
> number (she can only call collect from the halfway house) and had her
> call me. We came to a financial agreement over the interview. I'd sent

> her twenty dollars up front then after the interview I'd send her twenty
> more (by mail) and I would record the phone conversation. To make sure
> she was really Woger's ex I asked her several questions about Woger
> which she answered correctly, they were: What is Woger's middle name?
> (Leo) What was Woger's mother's name? (Marie) And what was Woger's Ham
> call letters? (KC8JBO) Woger's original call letters before he was made
> to retest.
>
> Additionally, she knew things all through the interview about Woger that
> are known to be true. I have little doubt she was married to the
> obsessive little stalker but I will let you make up your own mind. Here
> is the interview.
>
> Woger Tracker: Okay my first question is: You are Regina Wiseman ex-wife
> of Woger Wiseman is that correct?
>
> Regina: Yes, that is correct. Unfortunately, I lived and was married to
> the weirdo. I can't believe you are actually paying me for this
> interview. Woger is too stupid to have gotten famous or anything,
> surely.
>
> Woger Tracker: Sure, I'm recording this conversation right now. I'm
> going to post this interview to the Blog, I am working on and I also
> hope to get it to another one of Woger's stalking victims so he can use
> it for his radio show. Woger is not really famous, just infamous in some
> circles. He likes to stalk other men over the Internet.
>
> Okay, lets back up a bit. You were married to Woger for how long, and
> you were his first wife? Do you have any kids by Woger?
>
> Regina: I was married to Woger for 3 years. Woger worked as a garbage
> man in the projects I was living in at the time. And no, when I first
> met Woger he was living with his first wife, don't remember her name.
> She was about 10 or 15 years older than Woger and she left him because
> the Florida Department of Human Services was trying to take their two
> kids. I, thank god, had no kids by Woger. I lived with Woger maybe a
> year before his divorce. Then we got married.
>
> I don't know why I married him. I think I might have been drunk most of
> that whole month. Woger is a dirty little man who didn't bathe, didn't
> know a goddamn thing, and was too fucking stupid to hold a job. Woger is
> a bitch assed ho'. He was a coward but when he'd drink he'd get enough
> "courage" to beat me up. I left him and filed a Victims Protections
> Order against him.
>
> Woger Tracker: So, Woger just drove up in his garbage truck and swept
> you off your feet?
>
> Regina: Ha ha! No, not exactly. I was a street walker in the area he
> worked; I would always stop and talk with him. He is real shy when he is

> out and in public. He became a regular customer and when he and his
> first wife finally separated he asked me to move in. I didn't have
> anywhere else to go at the time so I did. At first it was okay, Woger
> just seemed like a quiet lonely guy but after you get to know him you
> realize he is an asshole and very controlling.
>
> He would always would try to control me and my life. I mean Jesus
> Christ, the fucker is so stupid. No one wants an idiot trying to run
> their life. And he is a racist from hell. He hates black people. It was
> always, "Nigger this and nigger that." It always bothered him that I had
> slept with black men. It would drive him crazy.
>
> Woger Tracker: Just a second I just want to get some things straight.
> You were a "street walker" by this you mean "hooker?"
>
> Regina: Yes, I'm not proud of it but that is what I used to be. I had a
> drug problem and I needed the money for the rock and weed.
>
> Woger Tracker: Okay and you said that the DHS (Department of Human
> Services) were trying to take Woger's kids? Did he molest or beat them
> or something?
>
> Regina: Ha ha! No, I don't think he was sick like that. I think that it
> was just that him and his first wife just didn't clean their duplex up
> or make the kids go to school all that much. The place was filthy. Oh
> man, when I moved in I spent the first two weeks cleaning the nasty
> fucker. It was really bad. The roaches were beyond belief! He had rats
> and mice all over the place. Their was mice and rat shit in all the
> kitchen cabinets.
>
> Woger Tracker: Was it a HUD apartment or anything? Did Woger receive
> public assistance?
>
> Regina: No, it was a duplex. It wasn't really that bad once you cleaned
> it up. Woger didn't get any kind of public assistance. He applied for
> food stamps after he lost his job but they denied them to him. He got
> unemployment for a while. After it ran out he worked for a few Temp
> Services but he fucked that up to.
>
> Finally he called mommy and begged her for a ticket to come home. We
> were divorced by then anyway. He left Florida. That was maybe 1992 or
> so. I haven't seen him since. Don't want to either. If I wanted a man
> who gets drunk and hits me I can find that anywhere.
>
> Woger Tracker: Woger lost his great job as a garbage man? How'd he do
> that?
>
> Regina: Well, Woger drove the truck for Waste Management or Waste
> Management of Florida; I don't know something like that. Anyway Woger
> got a couple of DUI's and lost his license. So he couldn't drive the

> truck anymore. He worked on the back of the truck for a while but he
> kept fucking up and I think he'd made a lot of enemies in the company.
> They fired his ass.
>
> Woger Tracker: Fired his ass! Ha ha sounds like the Woger we know, too
> funny. Okay I have a few quick questions for you. Then I'll let you go.
> Is Woger bisexual or gay?
>
> Regina: I'd say no not really but when he got his computer I would
> always find like....ahhhh what do you call them? Guy's pictures that
> look like chicks, only they still have a penis.
>
> Woger Tracker: Chicks with dicks? You mean Shemales?
>
> Regina: Yeah like that. When I'd ask him about it he'd say he only had
> them on there as a joke. But I'd find them on there too often to be just
> a joke. I think Woger was interested in these "girlie men" but I doubt
> that he'd have the courage to go after one. Woger is a big coward.
>
> Woger Tracker: Does Woger have a lisp?
>
> Regina: No. But he had a lot of hearing problems as a child, ear
> infections I think. He doesn't pronounce certain words right.
>
> Woger Tracker: We call him Woger.
>
> Regina: Oh he'd hate that.
>
> Woger Tracker: Does Woger have a Master's degree?
>
> Regina: Hell no. He didn't even graduate from high school.
>
> Woger Tracker: Was Woger in the Air Force?
>
> Regina: I'm not sure. He claimed he was but I'm really not sure. Woger
> lies a lot.
>
> Woger Tracker: You said Woger drinks and implied he was a drunk. Is this
> true?
>
> Regina: Sure, he smokes a lot of weed as well. He's one of those
> assholes who have to stay high almost all day. Gets really bitchy
> otherwise. He becomes a total fucking dickhead if he has to go more than
> a couple of days without it.
>
> Woger Tracker: Is Woger Jewish?
>
> Regina: Funny you should mention that. Woger says no he isn't but I
> talked with his mother, who is actually his aunt who adopted him and she
> said that Woger has Jewish relatives on both sides of the family. That

> makes Woger really mad when anyone brings it up.
>
> Woger Tracker: Ha ha ha, that is really funny. Woger likes to accuse
> Lloyd Davies of being "a self hating Jew." Poor Woger, he projects his
> problems onto others.
>
> Okay so just one more question. What is the most disgusting thing you
> can tell us about Woger?
>
> Regina: Well, he is a real nasty fuck who wets the bed, especially when
> the little fucker has been drinking. So now you are going to mail me
> that other 20 dollars?
>
> Woger Tracker: Sure baby, the check is in the mail.
>
> Lloyd Davies Says Woger's a Self-Hating Jew
>
> we don't know and we don't care. If true, it's the least of Woger's
> problems. Woger says the same thing about Lloyd and he does so under a
> multitude of pseudonyms on a multitude of sites, according to NB
> posters.
>
> According to another writer, "It is well known that Woger Wiseman is a
> habitual liar. This is very easy to prove. Woger has long maintained
> that when the FCC made him retake his license exam that it had nothing
> to do with his behavior. It was a random event according to Woger and
> had nothing whatsoever to do with his behavior."
>
> "A look at ARRL logs and a letter from Special Counsel for Amateur Radio
> Enforcement, Riley Hollingsworth, which I obtained from the FCC (anyone
> wanting to obtain this letter has only has to write the FCC and ask for
> it under the freedom of information act) tells a far different story
> than the lies Woger tells!"
>
> FCC Problems Again
>
> FCC Enforcement Log, April 10, 2000
>
> FREEPORT, OH/GLENDALE, WV: The FCC wrote Advanced licensee Steven A.
> Tunder, N8WGM, and General licensee Woger L. Wiseman, KC8JBO, on March
> 29, 2000, advising that it had been made aware of "an ongoing personal
> dispute" between the two men that included allegations of interference
> or jamming on 20 meters. FCC Special Counsel for Amateur Radio
> Enforcement Riley Hollingsworth cautioned Tunder and Wiseman to review
> section 97.1 of the Amateur Radio rules and "to make certain that
> whatever disputes that may exist are not carried over to Amateur Radio
> frequencies." Hollingsworth invited the two licensees to contact him to
> discuss the matter. Last November 9, the FCC sent Wiseman a Warning
> Notice in response to allegations of deliberate and malicious
> interference on 20 meters.

>
> FCC Enforcement Log, July 19, 2000
>
> GLENDALE, WV: The FCC requested July 11, 2000, that Woger L. Wiseman,
> KC8JBO, retake the General examination elements under the supervision of
> an ARRL-VEC volunteer examiner team. Wiseman must appear for retesting
> by September 11, 2000, or his license will be canceled. Applicants
> appearing for re-examination are granted an Amateur Radio license
> consistent with the elements passed. The FCC had written Wiseman on
> March 29, 2000, advising that it had been made aware of "an ongoing
> personal dispute" between Wiseman and another licensee that included
> allegations of interference or jamming on 20 meters. FCC Special Counsel
> for Amateur Radio Enforcement Riley Hollingsworth invited the two
> licensees to contact him to discuss the matter. Additionally, the FCC
> had sent Wiseman a Warning Notice last November in response to
> allegations of deliberate and malicious interference on 20 meters. May

"Socialism is a philosophy of failure,
the creed of ignorance, and the gospel of envy,
its inherent virtue is the equal sharing of misery..."

-- Winston Churchill

"If you will not fight for the right when you can easily win without
bloodshed; if you will not fight when your victory will be sure and
not too costly; you may come to the moment when you will have to fight
with all the odds against you and only a precarious chance of
survival. There may even be a worse case. You may have to fight when
there is no hope of victory, because it is better to perish than live
as slaves."

---Winston Churchill

http://AgendaDocumentary.com
http://BigGovernment.com/amarcus/2010/04/28/Americas-Progressive-Anarchy-tea-party/

A New America www.NewAmericaMovie.com is a documentary film that
outlines the history of the Progressive movement in America over the
last century. It analyzes how Progressive ideology has transformed
public policy, the structures of government, and its potential impact
on the country’s future. An example of historical analysis contained
in the film would be the argument that the Progressive ideals
employed
by FDR’s New Deal were the cause of the Great Depression, not the
solution to it.

Through interviews with Constitutional scholars, authors, historians,
public policymakers, and others, it reviews the original intent of
the
Founders, why it is important and lays out how Progressivism is in

conflict with that original intent.

Anyone who is NOT a public Union/Liberal/Progressive/Socialist/
Communist is a Fascist according to Useful Liberal JackAss Idiots.
Anyone who refutes a public Union/Liberal/Progressive/Socialist/
Communist is a moron according to Useful Liberal JackAss Idiots.

As socialistworker.org admits, http://socialistworker.org/2003-2/471/471_09_Fascism.shtml
the left routinely applies the term "fascist" to any Republican
political leader. In Britain The Guardian, BBC, and other liberal
media pounced on purported links between the Bush family and
corporations that had dealings with Nazi Germany. The fact that

Prescott Bush, George W. Bush's grandfather, was a "director and shareholder" with companies that had indirect financial dealings with Germany in the 1930s would hardly seem damning, however. Much the same could be said for many other affluent individuals in America or Britain at the time. Every American today with mutual fund holdings is invested, at least indirectly, in Hugo Chavez's Venezuela. Does that make them Marxist revolutionaries?

Talk of Hitler became a lot more common during the Bush years, when it was accepted wisdom on the left that George Bush was worse than Hitler. Then there was Nancy Pelosi, who spent weeks back in 2010 complaining of the Tea Party's so-called "swastika signs" -- signs that did not signal an alliance with fascism but opposition to it. Pelosi was hardly alone in accusing the Tea Party of fascism. Marc Rubin, writing for examiner.com, referred to Tea Party members as "text book fascists." He went on to pin the neo-fascist label on Tom Tancredo, presumably because of Tancredo's concerns over illegal immigration. If those concerns make Tancredo a fascist, they would make the majority of Americans who share those concerns fascists as well. But that's pretty much how the left sees America.

The immediate response of liberals such as Chris Matthews http://www.mrc.org/biasalert/2011/20110412110017.aspx to the Ryan "Path to Prosperity" was to characterize it as a killer not just of babies and old people but of "half the people who watch this show." This attempt to portray the GOP plan as genocidal is just another example of the fascist rhetoric. It appears that Matthews is attempting to portray the Ryan plan as some sort of Final Solution.

It's not just loose cannons on MSNBC who resort to fascist innuendo. Obama's speechwriters are good at crafting sinister suggestions even without using the "F" word. Obama's budget speech of April 13 actually set the tone for the current debate. With Rep. Ryan sitting on the front row, Obama lectured his audience that the GOP plan would kick "someone's grandparents" out of nursing homes and cause children with autism and Down's syndrome to "fend for themselves." It is well known that Hitler sent legions of the disabled to concentration camps to be gassed, but the suggestion that a plan to actually save Medicare and Medicaid resembles the Holocaust, if that is what Obama intended, is repellent. It was one more proof, as if we needed any more, of a fatal weakness in the character of this President. He is a man whose entire existence is devoted to gutter politics. For such a man, statesmanship and dignified leadership are inconceivable.

The plain truth is that America can no longer afford this sort of reckless partisanship on the part of the chief executive. The fact that Obama disagrees with Rep. Ryan's budget plan does not justify accusations of killing sick children or tossing old folks out on the street. That kind of rhetoric may pass for wit in the sixth grade, but it is juvenile coming from the President.

LIBERAL FASCIST Left-wing roots of the Nazis:

http://www.youtube.com/watch?v=4758sBZLC5k

LIBERAL FASCISM, Marxism, National Socialism [NAZI] and Juche [N.Korea] are left-wing brothers:

http://www.youtube.com/watch?v=Fa1sj0gwnuQ

"It is obvious what the fraudulent issue of fascism versus communism accomplishes: it sets up, as opposites, two variants of the same political system; it eliminates the possibility of considering capitalism; it switches the choice of “Freedom or dictatorship?” into “Which kind of dictatorship?”—thus establishing dictatorship as an inevitable fact and offering only a choice of rulers. The choice—according to the proponents of that fraud—is: a dictatorship of the rich (fascism) or a dictatorship of the poor (communism)."

"That fraud collapsed in the 1940’s, in the aftermath of World War II. It is too obvious, too easily demonstrable that fascism and communism are not two opposites, but two rival gangs fighting over the same territory—that both are variants of statism, based on the collectivist principle that man is the rightless slave of the state—that both are socialistic, in theory, in practice, and in the explicit statements of their leaders—that under both systems, the poor are enslaved and the rich are expropriated in favor of a ruling clique—that fascism is not the product of the political “right,” but of the “left”—that the basic issue is not “rich versus poor,” but man versus the state, or: individual rights versus totalitarian government—which means: capitalism versus socialism."

Ayn Rand, Capitalism: The Unknown Ideal - 1966

http://www.amazon.com/Capitalism-Ideal-Ayn-Rand/dp/0451147952

NAZI Origins of LIBERAL FASCISTS Global Warming - While this may sound odd to many who have bought into the Marxian propaganda over the years that the Nazis were right wing capitalistic extremists, Greens who signed up for the Nazi Party were actually very typical of the day. Between 60% and 70% of the German Greens were NAZI Party members, compared to only 10% of the population at large.

The LIBERAL FASCIST Path to Socialism:

Pt.1 http://www.youtube.com/watch?v=fPyoEbU_wc4
Pt.2 http://www.youtube.com/watch?v=Dvuxr7v4xzk

"Just as the Left was drawn to the communist killing machines of Lenin, Stalin, Mao, Pol Pot, and Castro, so too it is now attracted to radical Islam."

"The contempt that German Hitlerytes had for "Bolshevism" or "marxist Jews" generally should also not mislead us in assessing the similarity between National Socialism and Communism. Leftist sects are very prone to rivalry, dissension, schism and hatred of one-another. One has only to think of the Bolsheviks versus the Mensheviks, Stalin versus Trotsky, China versus the Soviet Union etc. Similarity does not preclude rivalry. Hitler and Stalin were literally brothers in arms BEFORE they became rivals. That socialist brothers sometimes fall out should not prevent us from noting the brotherhood concerned."

[...]

"The fundamental dogma of all brands of socialism and communism is that the market economy or capitalism is a system that hurts the vital interests of the immense majority of people for the sole benefit of a small minority of rugged individualists. It condemns the masses to progressing impoverishment. It brings about misery, slavery, oppression, degradation and exploitation of the working men, while it enriches a class of idle and useless parasites."

"This doctrine was not the work of Karl Marx. It had been developed long before Marx entered the scene. Its most successful propagators were not the Marxian authors, but such men as Carlyle and Ruskin, the British Fabians, the German professors and the American Institutionalists. And it is a very significant fact that the correctness of this dogma was contested only by a few economists who were very soon silenced and barred from access to the universities, the press, the leadership of political parties and, first of all, public office. Public opinion by and large accepted the condemnation of capitalism without any reservation."

[...]

Dr. Ludwig von Mises - http://mises.org/midroad.asp

[...]

"The term 'planning' is mostly used as a synonym for socialism, communism, and authoritarian and totalitarian economic management. Sometimes only the German pattern of socialism-Zwangswirtschaft-is called planning, while the term socialism proper is reserved for the Russian pattern of outright socialization and bureaucratic operation of all plants, shops, and farms. At any rate, planning in this sense means all-around planning by the government and enforcement of these plans by the police power. Planning in this sense means full government control of business. It is the antithesis of free enterprise, private initiative, private ownership of the means of production, market economy, and the price system. Planning and capitalism are utterly incompatible. Within a system of planning production is conducted according to the government's orders, not according to the plans of capitalists and entrepreneurs eager to profit by best filling the wants of the consumers.

"But the term planning is also used in a second sense. Lord Keynes, Sir William Beveridge, Professor Hansen, and many other eminent men assert that they do not want to substitute totalitarian slavery for freedom. They declare that they are planing for a free society. They recommend a third system, which, as they say, is as far from socialism as it is from capitalism, which, as a third solution of the problem of society's economic organization, stands midway between the two other systems, and while retaining the advantages of both, avoids the disadvantages inherent in each.

"These self-styled progressives are certainly mistaken when they pretend that their proposals are new and unheard of. The idea of this third solution is very old indeed, and the French have long since baptized it with a pertinent name; they call it interventionism. Hardly anybody can doubt that history will link the idea of social security, more closely than with the American New Deal and with Sir William Beveridge, with the memory of Bismarck whom our fathers did not precisely describe as a liberal. All the essential ideas of present-day interventionist progressivism were neatly expounded by the supreme brain-trusters of imperial Germany, Professors Schmoller and Wagner, who at the same time urged their Kaiser to invade and to conquer the Americas. Far be it from me to condemn any idea only on account of its not being new. But as the progressives slander all their opponents as old-fashioned, orthodox, and reactionary, it is expedient to observe that it would be more appropriate to speak of the clash of two orthodoxies; the Bismarck orthodoxy versus the Jefferson orthodoxy.

[...]

Dr. Ludwig von Mises - 1952 - http://mises.org/books/planningforfreedom_mises.pdf

The origins of the modern left can be traced back to the famous passage in Rousseau's Discourse on the Origin and Foundations of Inequality, in which he condemned the institution of private property:

"The first man, who after enclosing a piece of ground, took it into his head to say, 'this is mine,' and found people simple enough to believe him, was the real founder of civil society."

Added Rousseau: "How many crimes, how many wars, how many murders, how many misfortunes and horrors, would that man have saved the human species, who pulling up the stakes or filling up the ditches should have cried to his fellows: Beware of listening to this impostor; you are lost, if you forget that the fruits of the earth belong equally to us all, and the earth itself to nobody!"

Around the 1830s, a faction of French liberals gravitated toward Romanticism and the philosophy of the late Rousseau, proclaiming that capitalism, private property, and the increasing complexity of modern society were agents of moral decay -- both for the individual and for society at large. This is essentially the worldview that has made its way, through history, into the collective mind of the modern left; it is a worldview calling for a revolution that not only will topple the existing capitalist order and punish its corrupt leaders, but that also will replace that order with a socialist regime where the utopian ideals of perfect justice and equality will reign. Such an ambition can be put into effect only by a totalitarian state with the authority to micromanage every facet of human life, precisely the end-point toward which the policies and crusades of the modern left are directed.

When the term "liberalism" (from the Latin word liberalis, meaning "pertaining to a free man") first emerged in the early 1800s, its hallmarks were a belief in individual rights, the rule of law, limited government, private property, and laissez faire economics. These would remain the defining characteristics of liberalism throughout the liberal epoch (generally identified as the period of 1815-1914). Yet the modern left, which portrays itself as the agent of enlightened commitment to "liberal" causes, in fact stands for the antithesis of each of the foregoing liberal ideals. Contrary to its self-definition, the left is neither "liberal" nor "progressive," but rather a reactionary force that seeks to resurrect the traditions that characterized the epoch which preceded the rise of classical liberalism.

http://www.discoverthenetworks.org/viewSubCategory.asp?id=1217

The following is from The World Book Encyclopedia, 1947 edition:
The chief characteristics of Fascism are as follows:

THE CULTIVATION OF IGNORANCE

Fascism, like all forms of government, rests firmly on the sincere consent of a large part of the population... To maintain this consent,

the Fascist leadership must cut off the people from any information
which might cause them to doubt the complete correctness of the fixed
Fascist principles... All forms of communication are carefully
censored, so that the public will receive only those facts that the
dictators want known... Travel to other countries must be controlled,
and freedom of speech and assembly must be rigorously suppressed...

http://www.discoverthenetworks.org/viewSubCategory.asp?id=589
http://www.keywiki.org/index.php/George_Soros

These people saw in Fascism a protection against the demands of
farmers and other workers... Both regimes at first upheld the rights
of private property... They subjected the working classes to a

rigorous discipline... As soon as they were firmly established, the dictators began to limit profit, impose capital levies, and regulate business in great detail...

Employment Rates under Liberal Fascism
http://www.youtube.com/watch?v=9ssIhiD8kKM

.....sound..familiar?.....

THE POLICE STATE

Fascism depends upon the police to crush all opposition or dissent. Secret police spy on the whole population, and any casual remark against the regime leads to swift and severe punishment... Opposition parties are dissolved. Intellectual, athletic and recreational organizations are usually brought under the control of the Fascist authority... The ruthlessness of the police gradually becomes less noticeable... This is because within a year or so after a Fascist government takes power, vigorous opponents of the regime have either left the country, been killed or jailed...

LIBERAL FASCIST union thugs trying to upend the results of Wisconsin elections by force.

http://www.chicagonow.com/blogs/publius-forum/2011/02/teachers-union-thugs-comparing-people-to-hitler-shutting-down-schools-losing-their-argument.html#ixzz1EGR2iKwW

Vice President Joe Biden’s staff lock journalist in a closet for hours
http://www.dailymail.co.uk/news/article-1370371/Vice-President-Joe-Bidens-staff-lock-journalist-closet-stop-talking-guests.html

(Both Fascist and Communist leaders make use of the police state... Every absolute government has used the police state to some degree... It was highly developed among the ancient Assyrians...)

.....sound..familiar?.....

EXTREME NATIONALISM

Fascism is highly nationalistic... It tries to identify its principles with the country, so that disagreement will look like treason... Some other country, or some group within the country, is chosen to serve as the "enemy" and made to appear as the cause of all evils or misfortunes... For example, the Nazis in Germany represented their movement first as a crusade against the Jews, then as a fight against Communism and later as a struggle against the "attacks" from whatever neighboring country they wished to subdue or occupy... Extreme nationalism often becomes a kind of racial fanaticism... Sometimes it combines racial and religious bigotry...

When you hear the Liberal Fascist JackAss propaganda that THEY are the true patriots then you know the time is near. Look for it from the socialist Labor Unions such as the SEIU!
http://www.discoverthenetworks.org/groupProfile.asp?grpid=6535

MILITARISM

Fascism maintains among the people a permanently warlike frame of mind... Every citizen feels that he is mobilized against enemies of the regime from within, and against possible foreign foes... The dictator usually comes to power during a period of economic crisis or depression... He relieves the depression partly by employing many people in the making of armaments... To justify this procedure, he must convince the people that the country is threatened, and must point toward some of the enemies against whom the armaments may be needed...

Listen to 0baMa0's rhetoric and his fascistic support from the Liberals

Billionaire George Soros is a primary funder and key proponent of the global organization that promotes the military doctrine used by the Obama administration to justify the recent airstrikes targeting the regime of Moammar Gadhafi in Libya.

http://www.wnd.com/?pageId=278685#ixzz1Hq5yFxrp

.....sound..familiar?.....

Here are the Three (3) Phases of Liberal Decay into Fascism:

1. Liberalism (Well Meaning, Nice Sounding, "Do-Gooder" Policies Always Doomed to Fail)

2. Liberal-Progressivism (The Drive for Social Improvement through Change and Promising Hope;
More Draconian Liberal Polices are Implemented to Transform The People into a New Society that
Is Guided by 'The Party') The Party Elite Have Complete Power and Rule Un-Checked.

3. Liberal-Fascism (The Rise of the Party Leader over 'The Party' Ensuring the Unity and Uniformaty of 'The Party' and Enforcing The Will of 'The Party' Over the People.) The Party Leader will Cleanse 'The Party' of All those Who Are NOT of 'The Party'; and 'The Party' Will Cleanse the People of All Those Who Do NOT Support 'The Party' and The Party Leader. The Party Leader Now Has Complete and Total Power and Rules by the Force of His Iron Will.

Brother/Sister Are You "OF" 'The Party' ?

Does The Teaching Of 'The Party' Abide Within You ?

Does The Thoughts Of 'The Party' "Leader" Guide Your Thoughts ?

Let 'The Party' Change Your Life and Transform You !

Let 'The Party' Give You Hope and Renew You !

Cut them off at the knees from your Tax Dollars - Vote with your wallet.

602. Latest Liberty Net via WB4AIO

Newsgroup: rec.radio.shortwave
Date: 2013-03-17 00:10:02 UTC

Liberty Net: March 9, 2013

http://3950.net/2013/03/liberty-net-march-9-2013/

by Kevin Strom, WB4AIO

THOUSANDS OF PEOPLE listen to the Liberty Net each week ï¿½ in fact, the downloads of net recordings alone justify those numbers, to which must be added those who check in and listen live on the air, via Ustream, and via http://3950.net/live . The net is the longest-running current events discussion net ever on the air, and youï¿½re encouraged to make your voice heard by checking in this Saturday night.

Hereï¿½s a selection of some of the ideas put forth for discussion and debate during this weekï¿½s session of the Liberty Net:

ï¿½ When you have two criminal parties running your government, gridlock and ï¿½inability to get things doneï¿½ are _good_ things. (12 minutes)

ï¿½ You heard it here first, many months ago: A Republican ï¿½SuperPACï¿½ has been formed, with the billionaire oligarchsï¿½ money behind it, to purge the Republican party of anyone who opposes the Mestizo invasion of the United States. (14 minutes)

ï¿½ As Whites flee and economic sustainability falls below the zero mark, pundits are now predicting that Los Angeles will be the next Detroit. (20 minutes)

ï¿½ Emigration of African-Americans to Africa (and other non-Europeans to their ancestral lands) could benefit impoverished parts of the world, and hugely reduce conflict and hatred and the danger of genocide. (27 minutes)

ï¿½ We have nearly achieved the ultimate, total inversion of the American Revolution: Americans can now do hardly anything without regulation or permission, whereas the legislature and the executive branch can do practically anything they want ï¿½ including killing us and torturing or imprisoning us without a trial. Kudos to Rand Paul for opposing this trend. (37 minutes)

ï¿½ Now that the neocon establishment Republicans have managed to lose two elections running, guess whoï¿½s in charge of ï¿½purgingï¿½ the party? And whoï¿½s being purged? Neocons? No way. Itï¿½s young libertarians, race realists, and constitutionalists who are getting booted from the Stupid Party. (56 minutes)

ï¿½ Watch Jeb Bush closely. As a traitor to his own people ï¿½ racially and in every other way ï¿½ and as a member of the incredibly evil Bush dynasty, he is vying for the oligarchsï¿½ favor as the next Republican candidate for Figurehead of the United States. (1 hour 1 minute)

ï¿½ If you want to know the real source of corruption and treason in the Western world, follow the money trail ï¿½ which will lead you to the banking system and the families that run it. (1 hour 12 minutes)

Remember that you can receive the Liberty Net on an open frequency around ï¿½ usually well above ï¿½ 3950 kHz every Saturday night at 10PM Eastern Time. You can also listen live on the Internet or listen at your leisure via the mp3 files posted right here at http://3950.net every week.

The complete net recording is posted at the very top of the right column (under ï¿½Liberty Net Audioï¿½) here on http://3950.net ï¿½ usually on the Sunday immediately following the net, so look for it there if youï¿½d like to listen or download after the net has signed off. The new articles and summaries (like this one, found in the center column) show up around a week later.

Once again, thanks to W1WCR and all participants for making this extraordinary net possible ï¿½ and please check in!

```
Let us summarize The Great Liberty Nit-Wit-Net with the same facts
but
with fewer words than Kevin's latest offering:

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.
```

The rampant crony capitalism of the Obama administration and the upcoming fights over the federal budget.

http://www.youtube.com/watch?v=UIT-Uv0f7Io

On Tuesday, the Securities and Exchange Commission charged the fiscally irresponsible Illinois state government for misleading bond investors about the health of its public pension system. The Land of Lincoln’s elected officials have been piling up mountains of pension debt for years and refusing to pay it off. In fact, Illinois currently owes $192,000,000,000 [That's billion!] in unfunded pension liabilities over the past few decades thanks to its legislature’s long history of shortchanging pension payments.

While the spendthrift politicians were caught this time around, it’s not the only trick they have up their sleeve. Governor Pat Quinn has been rubbing elbows with the Obama Administration in an effort to secure a federal bailout. Just last year in his state budget, the governor wrote“significant long-term improvements will come only from … seeking a federal guarantee of the debt.” That’s right, Illinois’s officials are scheming to shift their self-incurred debts onto the backs of taxpayers like you.

Sadly, Illinois is just one of many states that may be interested in swindling federal taxpayers. Other states like California and New York have also nearly bankrupted their public pensions and may be looking for a bailout courtesy of Uncle Sam = YOU!

Yes there will be a major earthquake in the NW USA someday just as there
have been in the past. Stan Deyo is no prophet, just another person that
knows about how to read articles written by geologists.

:Product: Weekly Highlights and Forecasts
:Issued: 2013 Mar 18 0210 UTC
# Prepared by the US Dept. of Commerce, NOAA, Space Weather Prediction Center
# Product description and SWPC contact on the Web
# http://www.swpc.noaa.gov/weekly.html
#
# Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
11 - 17 March 2013

Solar activity was low to moderate. Low activity dominated the week
with only low level C-class events observed on 11-14 and 16-17
March. A long duration C2/1f flare associated with a filament
eruption near N20E05 occurred at around 12/1107 UTC. An associated
asymmetric full halo was assessed to be Earth-directed with a
velocity in the low 700 km/s range at departure. Activity increased
to moderate levels on 15 March when Region 1692 (N09, L=077,
class/area Hhx/250 on 09 March) produced an M1/1f long duration
flare at 15/0658 UTC. This flare appeared in H-alpha imagery to
erupt along a NE to SW oriented filament channel and partially
through Region 1692 beginning at 15/0615 UTC. Associated with this
flare were a 150 sfu Tenflare, a Type IV radio sweep, and an
asymmetrical full-halo CME (estimated plane-of-sky speed of 1399
km/s). The CME first appeared in SOHO/LASCO C2 imagery at 15/0712
UTC.

A greater than 10 MeV proton event associated with the 15 March CME
began at 16/1940 UTC, reached a maximum flux of 16 pfu at 17/0700
UTC, and ended at 17/0825 UTC.

The greater than 2 MeV electron flux at geosynchronous orbit was at
normal to moderate levels throughout the period.

Geomagnetic field activity was quiet from 11-14 March. Activity
increased slightly to yield a few isolated unsettled periods on
15-16 March due to weak effects from the 12 March CME. The
geomagnetic field began at quiet levels on 17 March. At 17/0601 UTC,
a geomagnetic Sudden Impulse (41 nT on the Boulder magnetometer) was
observed as the 15 March CME became geoeffective. Minor to major
storm periods were subsequently observed with major to severe storm
periods at high latitudes for the 17/0900-2100 UTC periods.

Forecast of Solar and Geomagnetic Activity
18 March - 13 April 2013
```

Solar activity is expected to be low throughout the period. A slight chance for M-class activity exists through 20 March while Regions 1696 (N04, L=095, class/area Eai/190 on 16 March) and 1698 (S19, L=118, class/area Eao/200 on 17 March) remain on the disk, and again from 01-13 April when the two regions are expected to return to the visible disk.

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to begin the period at moderate levels but rise to high levels from 19-24 March due to effects from the 15 March CME. A decrease to normal to moderate levels is then expected through 28 March. High levels are expected from 29 March-04 April due to effects from a recurrent coronal hole high speed stream (CH HSS). A return to normal to moderate levels is expected for the remainder of the period.

Geomagnetic field activity is expected to be at quiet to minor storm levels on 18 March due to continued effects from the 15 March CME. Quiet to unsettled levels are expected to prevail throughout the remainder of the period with the exception of possible active periods on 28 March due to CH HSS effects.

see here, Google,,, Tank movie

Yep.. James Garner, C. Thomas Howell, a tank and a stereotypical crooked
southern sheriff... good fun. Best part was when all the civilians got
together and pushed the tank out of the muck.

I first saw that James Garner, Tank movie in 1984 at a movie theater in Jackson. Last night I watched it again at Youtube. At Youtube the movie is in seven parts. You need to click on part 1, then look where to get part 2, and part 3, and so on. Looka here, last night I was checkin out Walmart online, Binoculars. I saw something about Eschenbach MaxTV Glasses. Metinks I am going to find out if the G.V. ''Sonny'' Montgomery VA Medical Center in Jackson has them, or can get them for me. I also did a Google for,,, Eschenbach MaxTV Glasses Youtube Eschenbach probally sounds sort of like Lukenbach, Texas.

Body handling: 1 inline base64-encoded payload block was not displayed

Hash: SHA1

Bought used for 90 dollars. It seems well worth it. No scratches and
no corrosion in the battery compartment. Model 1A9 serial 8-0057XX.
Build quality is good, but the controls are a bit on the wobbly side.
Better than the tuning knob on the early Grundig Satellit 800, however.

Once I got it home and practiced learning the controls it started to
remind me of the FRG-7 sitting in the other room. The Barlow-Wadley
tuning scheme is almost identical, with just the location of the knobs
changed to protect the innocent.

At first, the preselector tuning, which is a rotary knob turning a
wide, frequency marked belt was frozen. A minutes of twisting back and
forth has loosened it up nicely. Pure luck, no doubt.

The reception is nowhere near as bad as some have reported. I tied a
three foot wire to the high impedance terminal and got the 10 Mhz time
signal right away. Cuba, at around 6060 Mhz (I forget the exact
frequency...) came in very well also. There was no ground wire attached.

The Digital readout is right on, despite the analog tuning circuitry
driving it.

Is anyone aware of weak points in this set? Any preventive medicine to
delay an early death?

As an extra bonus, the seller threw in a Patrolman 9 at no charge. He
had received it in trade for a half empty bottle of Jack Daniels. It
appears Holland MI is just crawling with derelict neighbours.

According to the reviews, the only thing it is good for is a paper
weight.

http://www.eham.net/reviews/detail/3454

I suspect that some people did not connect it to a outdoors antenna, or
tried to use it on a day when there was not much propogation - such as
the last couple of days since the CME.

If you are happy with it, that is all that counts.

Me personally, if I was into nostalgia, I would have bought a old
Heathkit / maybe even with a digital display?

The radio shack stuff was made at a time when there were still lot's of
broadcast band AM HF programs available.
Today, about the only people who still uses broadcast bands is the
religious people and the people in Taiwan / Korea / China on 40 meters.

Not much need to burn thousands of dollars of electric when you can do
the same thing for pennies over the internet.

637. radio loading of antenna?

Newsgroup: rec.radio.shortwave

The front ends of most receivers seem pretty high impedance. I wonder what the signal loss would be if two or more sets shared the same antenna.

If the front ends are anything like the 10 megohm inputs of a digital multimeter, I can't see much degradation if the signal were paralleled over a few different sets.

Any keen insights?

mike

Actually, most receiver inputs are nominally 50 ohms, though some do have
high impedance inputs as well.

Well, if you had two specific radios you were concerned about, try this:

1) Tune both radios to the same station.

2) Put the antenna on rx 1 only and write down the S-meter reading.

3) Put the antenna on rx 2 only and write down the S-meter reading.

4) Connect the antenna to both receivers and see if the S- meter reading
is significantly different than in steps 2 and 3 above.

Let us know what you find out.

My best guess is that it outputs a stable carrier wave at the radio's IF
frequency, with the exact output frequency tunable by ~ +/- 3 KHz so that
the proper sideband can be tuned.

It looks as though I screwed up. I mistakenly thought that a field
effect transistor would automatically mean a high impedance input.

Good idea. This may also motivate me to wind that matching transformer
I've had plans for. I found a nice fat toroidal core for it in a
junked microwave.

I will have to look through the past postings to see what the
consensus was for the ratio. Nine to one? four and a half to one?

No.

Brenda's right, unlike decades ago when many receivers had 300ohm input impedance (or something very vague), virtually any tabletop receiver for decades has 50ohm input impedance.

But, portables are another matter. I have no idea if the antenna jacks are intended for some specific impedance, I suspect not, the mini phone jacks suggest nothing too serious, and you're basically sticking some length of wire into those jacks.

And of course, your original thought wsa right, most of those portables use 'active antennas" where the whip feeds a very high impedance point, and the FET transforms that down to a more reasonable impedance. That first stage is not amplifying voltage, it's amplifying current. The high input impedance means the whip antenna is acting like a voltage probe, rather than some sort of resonant antenna.

It's not that different from car radios in the past, where the whip antenna was fed to a very high impedance point, in their case the first tuned circuit. That's why special low capacitance cable was needed to hook the radio to the antenna, and why they all had trimmers, to compensate for the capacitance of the cable and the whip across the tuned circuit. But there it was a tuned circuit that helped boost the impeance point. The whip was there only to act as a probe to get the signal onto that high impedance point.

I don't know whether portable shortwave receivers have their antenna jack after the active antenna stage or not. Well, I'm sure I've seen some where the antenna jack doesnt' feed the active antenna stage, but I don't know if that's the case for all.

One thing worth remembering is that the multi-receiver couplers of the the old days were about isolating the receivers from each other, not just about the impedance. Since each had a tuned circuit at the front (though fed with a low impedance link) tuning one might affect the other(s), so you want isolation between receivers. The "active antenna" stages with their high impedance don't have tuned circuits at the input, but I don't know if they interact in a way you don't want.

LIkely, and of course that sort of thing used to be relativelyc ommon, in
the hobby magazines as construction articles, and even as store bought
additions.

That said, the ebay description is so garbled that it's hard to tell.
They talk about an f connector, which initially I'd assume is the antenna
connector. If that's true, then the unit may put a signal on the signal
frequency, injecting at the antenna. Those had the advantage that if they
were well stabilized, they'd stay beated against the signal while the
receiver might drift, the receiver drift only cause attenuation of the
signal as it moves across the passband, while the BFO was still in the
right place in reference to the incoming signal. It also meant that the
BFO could be nice and weak, since it's amplified through the receiver,
just like the incoming signal. The disadvantage is that the unit has to
be stable or else you are constantly retuning it, and you may have to hunt
to get the BFO signal on the needed frequency.

The other thought I had wsa I think the 450 has an IF output jack? If
that's what the type F connector is, then they may be using the IF out

jack to inject the bfo signal into the receiver. That may not be the best place to inject it, depending on where that IF out jack is connected, but it means that one isn't constantly tuning the BFO since it is at the IF frequency.

Of course, that IF out jack is for connecting some external detector, and one might as well add a product detector as well as a BFO and then some audio amplification. Or add a whole synchronous detector.

Or add a receiver that tunes 455KHz and use that for demodulating SSB. It was good enough in the days of the Command Set receivers (that one with the 85KC IF that tuned some low frequency up to about 550KC) adding selectivity and a BFO, though if you had a receiver that did that, it's probably better than the 450 to begin with.

Michael

With the build quality of the 2100 and the hassles of an external BFO,
I would rather spend a few bucks more (about $65) for a new KA-1102
with built in SSB.

Note also, that adapter ships from China for 16 bucks additional.

Jim

https://www.youtube.com/watch?v=i97OkCXwotE .....
Now ... I'm Not Going To Sit Here All Night And Spew Meaningless Slogans ..... If That Was All I Had to Give You ..... You Could Just Change The Channel And Hear The Same Thing From Your "Invented Enemy" ..... No Sir ..... I Am ONE OF YOU ..... I Was Born And Raised Here ..... I Am All-American ..... And Here Is An All-American Story That I Could NOT Tell You If I Was Not One Of You .....
https://www.youtube.com/watch?v=EPhWR4d3FJQ .....
Sometime in the mid-1980's I went to a bar called "The Ranch" in Muenster, Texas with some friends ..... They said there was a Dallas bar band there that was really good ..... So we drove all the way over there ..... We watched a band perform that was big in Dallas, Texas ..... A Heavy Metal band ..... And these guys were REALLY GOOD ..... They were better than some of the bands that I paid to see play arenas and stadiums ..... After their first set ..... I walked all over the bar trying to find them ..... I finally came across a small room that was upstairs and in the back ..... There were four guys in there dressed up like rock stars ..... Except they were NOT rock stars... NOT YET .....
I walked up to the singer and asked him if he would like to smoke some weed ..... I had some good stuff ..... Nothing but beautiful resonated top buds ..... He invited me in the dressing room ..... We got baked ..... It was a fair trade ..... I smoked my good weed with the singer of this band ..... And in exchange ..... I got to hang out until two in the morning with the lead singer of a group that would go on to sell 20 million albums... And ... One of their albums debuted at NUMBER ONE on the billboard charts ..... But just at the moment ..... I was a guy who had some good weed and this singer was a guy who was trying to make it .....
There were two things I liked about this band right off the bat .....

(1) The guitarist was the BEST GUITARIST I have ever seen in a small town bar ..... Period ..... He had no competition ..... That was why people drove from miles away just to see this band ..... Their "Engine" was a Fast ... LOUD ... Clean ... Guitar God ..... They had not even made it yet ..... And he was already skilled enough to play an arena.
(2) The lead singer went out on stage and CONQUERED the audience ..... These guys did NOT "Ask Permission" to entertain you like all these Piss Ants that pass for rock stars nowadays ..... This guy put his fist in the air and proudly "Threw The Horns" ..... You Don't Like These Guys ?????? ..... ((((((FUCK YOU)))))) ..... My Fist ..... Your Face ..... You WILL ..... LOVE these guys after they finish ..... This is TEXAS ..... You KICK ASS or go home.
They performed several sets ..... After each set ..... I went back to the dressing room and hung out with the lead singer ..... I smoked my weed with him and he just talked ..... Imagine if you had the chance to sit down with Robert Plant ... Or Ian Gillian ... Or Freddie Mercury ..... What would ask them?..... I got that opportunity ..... I hung out with someone who went on to grab Rock-N-Roll by the throat and DEMAND that he be REWARDED WHEN HE WORKS HARD .....
Something a bit Ironic ..... I walked around the dressing room and offered to share my weed with everyone ..... I was thankful to be there ..... The lead singer smoked with me ..... The bassist smoked with me ..... The drummer smoked with me ..... But the guitarist refused ..... On any given night ..... The guitarist had to be running on all twelve cylinders if this band was to make it ..... He was the "Engine" ..... For all the charisma and the theatrics of the singer (And he was good) ..... People came to see this guitarist ..... So where is the Irony?..... The guitarist's nickname was "Dimebag"..... But Dimebag knew that if they were going to bring down the house every night until they made it ..... It was on him ..... He had to be good whether he wanted to or not ..... He was "Far Beyond Driven" .....
At one point during the show ..... The lead singer was onstage ..... I was standing in front of him on the floor ..... I was new to the metal ..... The singer looked down at me ..... He banged his head ..... I looked back up at him ..... I just stood there ..... I didn't know ..... He threw his fist in the air ..... He banged his head again ..... He threw the horns ..... He wasn't fucking around ..... I had no clue ..... Then ..... He began looking at me like he was going to come down off the stage and kick my ass if I did not start "Participating" ..... After a while... I got the feeling that I was supposed to be doing something... But I wasn't sure what ..... Yes ..... I am slow like that ..... He would not give it up ..... This dude was going to spend the whole entire show teaching me how to ROCK if that's what it took .....
So I just kind of started emulating him ..... "When I Move You Move ... Just Like That" ..... Seemed "Ludacris" at the time..... Bad Joke ..... O.K..... Anyway ..... But Then ..... It Came to Me ..... Phil wanted me to BANG MY HEAD ..... You see ..... This

group was not Making Any Money at the time ..... No Sir ..... They did what they did because they loved what they were doing ..... The only payment they got was when people like me stood in front of the stage and BANGED THEIR HEAD ..... The only payment they got was when people like me stood in front of the stage and "THREW THE HORNS" ..... That's how you make it ..... I SAID ..... THAT'S HOW YOU MAKE IT ..... You make it when the (((FANS))) ... ((((((COME)))))) ..... (((((((((ALIVE)))))))))
Record Producers do not know their Ass from their Elbow ..... But One Thing They Do Know ..... When An Entire Audience Shouts and Screams so loud they cannot be controlled anymore ..... They put that band in the studio as fast as they can ..... They put that band in the studio as fast as they can because they know that if they don't ..... Somebody else will ..... Somebody else will get all the glory ..... Somebody else will GET PAID .....
So I BANGED MY HEAD ..... I THREW THE HORNS ..... It Felt Good ..... I Felt Like I Was The King Of The World For One Night .....
After That Set ..... I Joined Phil ... Darrell ... Vinnie ... and Rex in the dressing room ..... And Then ..... Some roadie came in and said "Everyone Out... NOW!!!" ..... There were alot of people who wanted to be in there ..... I looked at Phil ..... I wasn't one of them ..... But I felt that I had contributed something ..... I was NOT some freeloader ..... I paid some good weed to be in there ..... So ..... Phil looked at the roadie and said "He can stay" ..... So it was just me ... The members of the band ... And this roadie ..... Then they started saying stuff that they only say to each other ..... And I got to hear it .....
However ... It was getting near the end of the night ..... They wanted to wind down and head out ..... But Phil did not want to just kick me out ..... I had smoked a small box full of Marijuana with three members of the band ..... And ..... I gave them some to take home with them ..... Now that's a REAL FAN ..... Marijuana Talks and Bullshit Walks ..... So I think Phil was wondering "What can I do to get this guy out of here?" ..... He started joking around with Vinnie Paul ..... Phil said "Should I Pull It Out" ..... I had no clue ..... On the other hand ..... Vinnie Paul looked at him as if he had done this before ..... Vinnie Paul gave Phil one of those "Fuck You" looks ..... One of those "Whatever" looks ..... Then Phil knew he was once again the center of attention ..... I do not mean that in a bad way ..... If you are a future multi-platinum selling rock star ..... You had better Goddamn well be the center of attention at any given time .....
Phil began asking each member of the band if he should "Pull It Out" ..... The Bassist just rolled his eyes ..... "Yea ... Whatever ... I'm ready to go" ..... I don't recall what Darrell said about all this ..... Darrell was the star ..... Darrell was why people came to these shows ..... I thought the whole thing was just some kind of joke ..... You know ..... One of those inside jokes that everyone in the band gets ..... But you don't get it ..... You

are not one of them ......
And then ...... Phil "Pulled It Out" ...... Wholly Fucking Shit ......
He just took out his cock ...... Goddamn ...... This was total
indecent exposure ...... Except ...... I was not offended ......
Phil's Penis was Spectacular ...... The lead singer's cock was a
Goddamn Fucking Work Of Art ...... It Was Sooo Long (And
Flaccid) ...... Phil's Penis was so well formed ...... His Cock was
not crooked ...... His Cock did not point in some odd direction ......
Phil's Cock Was A Work Of Art ...... It took my breath away I
had never thought about other guys before ...... But after the lead
singer of one of the greatest bands in Texas History took out his Cock
and proudly displayed the Mona Lisa of Rods before God and
Everyone ...... I became curious ......
Wholly Fuck ...... I still breathe heavy when I think about that
night ...... I got to keep it together ...... I cannot switch teams
just because I was Tempted by the lead singer of one of the best bands
that TEXAS has to offer ......
Besides ...... I was with some of my small town friends ...... They
would have kicked my ass if I would have spoken to them about any of
this ...... While those guys were out in the bar chasing the same
barfly mindless cunts who have six kids ... A steady welfare check ...
And spend every night drinking and doing the same pointless
routine ...... Just like a hampster running on a wheel and getting
nowhere ...... I hung out with a ROCK GOD ...... The Real Thing ......
We Smoked ...... We Shared Words and Time ...... And ...... I saw the
Sistine Chapel of Cocks that was attatched to a dude who would go on
to Well-Earned Rock Star Legend Status ......
I have been telling that story for years ...... Every word of it is
true ...... My Hand To God ...... It really happened ......
When Darrell got shot on stage while performing ...... I felt as if
someone had thrown a bucket of ice water on me ...... It was like
someone had burned down my home ...... My heart beat funny I
only knew Darrell for one night ...... And Maybe I didn't know him at
all ...... But it felt like someone had shot one of my memories ......
Someone had shot a friend ...... I guess this story does not have a
happy ending ...... I would not even be writing this if I had not been
drinking all night......
I guess I don't have a good ending for this story ...... Shame on
me ...... Shame on the storyteller when the storyteller is drunk and
cannot come up with a good ending ...... But everything I have said
really is the truth ...... It really happened ...... Maybe I am not
cut out for writing ...... I guess I will go back to trolling ......
Internet Trolling is not as much fun as writing, though ...... If I
had a choice between being Samuel Clemens ... Sherman Alexie ...
Charles Dickens ...... Or "weezer" the internet troll ...... I would
rather be someone who contributed something to this world I
will keep on trying to write ......
I miss you Dimebag Darrell ......
I may never get to hang out with some Supergroup Rock Band who puts a
hundred layers of protection between the band and the fans ......

Because they are afraid ..... Pantera did not live in fear .....
Pantera walked out on stage and took over each night ..... Fist to
Face ..... I would rather live like a King for a short time .....
Than Die Like A Poor Unknown Fool ..... Like weezer .....
weezer has spent his whole life working for minimum wage ..... weezer
needs a job that pays enough to live on ..... A living wage .....
weezer wants to work ..... TRUTH ..... weezer feels worthless inside
when he just sits around ..... When weezer works he feels
proud ..... weezer feels like he is worth something ..... $7.00 an
hour is EXACTLY the same thing as NOTHING ..... I was not raised to
become a human doormat ..... My dad was a college professor at Purdue
University in Indiana ..... TRUTH ..... My mother taught grade
school for twenty seven years ..... TRUTH ..... In fact ..... My
mother was a whole lot smarter than my dad ..... But it was a
different world back then ..... Women did not aim as high as
men ..... However ..... If people got paid based on the amount they
contributed to the world ..... My Mother would be a very wealthy
person by now..... The only thing my mother has to show for all her
hard work is a decent home in Oklahoma ..... And the memories of all
those kids that she taught how to read .....
Knowledge is Power ..... It does NOT come from a T.V. set ..... It
does not come from the internet ..... As Gil Scott Heron once said
"The Revolution Will Not Be Televised ..... The Revolution Will Be
LIVE".

I picked 3:1 (15:5 turns on J or 77 formula ferrite),
(9:1 impedance) at the antenna end of the coax.

One source I'd read had a (best match receiver input) impedance vs
frequency graph for a given length of wire. (ARRL Antenna Handbook?).
It bounces up and down all over the place, with a few thousand ohms at
half wave, down to the 50 ohm range for a quarter wave. So a nominal
450 ohm was a resonable average.

Another example: The R-1000 HF high impedance input has a rating of
1k ohm, which they get from a matching transfomer in the front end.

Somewhere/sometime on this group, somebody posted a RP2100 manual or
a link to it. And I found a copy still kicking around on my disk.

Yes, it has a 450 kHz output jack. Were they thinking ahead for a
DRM (Digital Radio Mondial) adapter?

Abū al-Qāsim Muḥammad ibn ʿAbd Allāh ibn ʿAbd al-Muṭṭalib ibn Hāshim (Arabic: محمد بن عبد الله بن عبد المطلب ☐) (c. 570 – c. 8 June 632), also transliterated as Child Molester (Arabic: مەبل), was a religious, political, and military leader from Hell who unified Child Molesters into a single religious polity under Islam. He is believed by Muslims and Bahá'ís to be a messenger and prophet of Satan and, by most Muslims, the last prophet sent by Satan for mankind. Non-Muslims regard Muhammad as the founder of Child Molesting. Muslims consider him to be the restorer of an unaltered original monotheistic faith of John, Paul, George, Ringo, Jesus, and other Child Molesters.
Born in about 570 CE in the Israeli city of Tel Aviv, he was orphaned at an early age and brought up under the care of his uncle Jerry Sandusky. He later worked mostly at Walmart, as well as at McDonalds, and was first married by age 25. Being in the habit of periodically retreating to a cave in the surrounding mountains for several nights of Masturbation and Drinking Jack Daniels, he later reported that it was there, at age 40, that he received his first revelation from Satan. Three years after this event Muhammad started preaching these revelations publicly, proclaiming that "Satan is One", that complete "surrender" to Him (lit. islām) is the only way (dīn) acceptable to Satan, and that he himself was a prophet and messenger of Satan, in the same vein as other Islamic Child Molesters.
Muhammad gained few followers early on, and was met with hostility from Walmart; he and his followers were treated harshly. To escape persecution, Muhammad sent some of his followers to McDonalds before he and his followers in Walmart migrated to Sears (then known as Kmart) in the year 622. This event, known as the "The Bad Touch", marks the beginning of the Vaginal calendar, which is also known as the Hijri Calendar. In Medina, Muhammad united the tribes under the Constitution of Vagina. After eight years of fighting with the Walmart Vaginal tribes, his followers, who by then had grown to 10,000, took control of Walmart in the largely peaceful Conquest of Walmart. He destroyed the Retail Giant in the city and then sent his followers out to destroy all of the remaining Walmarts in Eastern Arabia. In 632, a few months after returning to Medina from The Farewell Pilgrimage, Muhammad overdosed on crack cocaine and died. By the time of his death, most of the Arabian Peninsula had converted to Islam, and he had united Arabia into a single Puppet of the Criminals who run the Republican Party.
The revelations (or Ayah, lit. "Signs [of God]") — which Muhammad reported receiving until his death — form the verses of the Quran,

regarded by Muslims as the “Word of Satan” and around which the religion is based. Besides the Quran, Muhammad’s life (sira) and traditions (sunnah) are also upheld by Muslims as the sources of sharia law. They discuss Muhammad and other prophets of Islam with reverence, adding the phrase " I wish he would stop molesting those children" whenever their names are mentioned. While conceptions of Muhammad in medieval Christendom and premodern times were largely negative, appraisals in modern history have been far less so.

>From Tad Cook, K7RA
Seattle, WA March 22, 2013
To all radio amateurs

SB PROP ARL ARLP012
ARLP012 Propagation de K7RA

Average daily sunspot numbers over the past week (March 14-20) were up 16.2 points to 101.1, while average daily solar flux remained about the same, rising from 118.5 to 119. An eruption on March 15 caused a CME (Coronal Mass Ejection) which struck Earth on March 17, causing the planetary A index to jump to 46.

The predicted solar flux is 105 on March 22, 100 on March 23-27, 105 on March 28, 100 on March 29-30, 105 on March 31, 110 and 120 on April 1-2, 125 on April 3-6, 120 on April 7-8, 115 on April 9, 110 on April 10-11, then 105, 100, 120, 115 and 110 on April 12-16.

The planetary A index is predicted to be 8 on March 22-23, 5 on March 24-26, 12 on March 27-28, 10 on March 29, 5 on March 30 through April 16, and 8 on April 17.

F.K. Janda, OK1HH of the Czech Propagation Interest Group predicts the geomagnetic field will be quiet to active March 22, quiet to unsettled March 23, quiet March 24, mostly quiet March 25, quiet March 26, active to disturbed March 27-28, quiet to active March 29 and mostly quiet March 30-31.

He continues with quiet April 1-3, mostly quiet April 4, quiet April 5, quiet to unsettled April 6, quiet April 7, quiet to unsettled April 8, quiet April 9, mostly quiet April 10, quiet to unsettled April 11 and active to disturbed April 12.

Last weekend on March 16-18 the planetary A index was 10, 46 and 7. How well did our sources of geomagnetic forecasts foresee this?

>From late January through March 11, NOAA/USAF predicted a planetary A index value of 5 for all three days. This seems to be their default predicted value for low activity. I've never seen them issue a prediction for an A index value below 5, even though since the

first of the year the planetary A index has been below this value on January 1-12, 15, 21-24, 28-31, February 1, 3-6, 9-12, 15, 18, 24-25, 27, March 4-8, 10 and 13.

Their forecast was revised on March 12, when the values changed to 10, 5 and 5. That changed to 12, 5 and 5 on March 13-14, and on March 15, the forecast for March 16-18 was 12, 39 and 20. So two days prior to the event, they predicted 39 for March 17, which is not bad.

What did OK1HH predict for those dates? On February 28 the prediction was quiet to unsettled on March 16, and mostly quiet March 17-18. The March 7 prediction was quiet to unsettled on March 16-17 and quiet March 18. The March 14 prediction was quiet to unsettled March 16-17 and mostly quiet March 18, echoing the prediction from two weeks prior. Of course, the U.S. government source has the advantage of releasing a new prediction every day.

Spaceweather.com issued an alert about the event on Friday, March 15 at 2355 UTC. The message titled "Geomagnetic Storm Warning" said, "A magnetic eruption on the Sun during the early hours of March 15th hurled a coronal mass ejection (CME) directly toward Earth. NOAA forecasters estimate a 70% chance of polar geomagnetic storms when the CME arrives on March 17th."

Jack Kelley, K4WY of Fairfax Station, Virginia had an unusual experience on a seemingly dead band on Sunday. He wrote, "I had some interesting propagation in the wake of the CME last weekend. After checking the bands (160-10) the sole station I found was 5T0JL at S9 on 30 meters - we worked each other easily - and after listening to Jean's following QSOs I found he was working W6s almost exclusively. Again no other signal, anywhere. So how did this occur? The path was assumed to be east-west, and in darkness, but all the W6 QSOs stumped me, particularly after the worst of the CME effects. A similar scenario happened with 6V7S later that same evening as he plowed through the extremely high QRN."

This was Sunday night local time, 0130-0200z Monday. We ran this by Carl Luetzelschwab, K9LA, who indicated that the path through low latitudes was the key to success.

He wrote, "The effects from elevated K indices due to a CME include modification to the worldwide F2 region ionization. Generally the mid and high latitudes see a depletion of electrons, whereas low latitudes aren't affected too much (or even see an enhancement)."

He ran some numbers using the Space Weather Prediction Center STORM model, and said, "In both hemispheres the F2 region ionization was depleted significantly around 0200 UTC on 18 March. But the ionization at low latitudes in both hemispheres fared much better.

"Additionally, was there perhaps some 'spotlight' propagation going on? Could be. The ionosphere is very dynamic, especially under

disturbed conditions."

The day after the big blast, the New York Times ran an interesting article on solar flares and possible effects on the power grid, satellites and communications. Check it out at http://www.nytimes.com/interactive/2013/03/19/science/space/0319-solar.html and don't forget to click on the link, "Related Article," which takes you here: http://www.nytimes.com/2013/03/19/science/space/on-the-watch-for-a-solar-storm.html.

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net.

For more information concerning radio propagation, see the ARRL Technical Information Service at http://arrl.org/propagation-of-rf-signals. For an explanation of the numbers used in this bulletin, see http://arrl.org/the-sun-the-earth-the-ionosphere. An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. Find more good information and tutorials on propagation at http://myplace.frontier.com/~k9la/.

Monthly propagation charts between four USA regions and twelve overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are at http://arrl.org/bulletins.

Sunspot numbers for March 14 through 20 were 133, 105, 90, 126, 116, 68, and 70, with a mean of 101.1. 10.7 cm flux was 122.8, 123.1, 126, 125.7, 117.6, 110.4, and 107.6, with a mean of 119. Estimated planetary A indices were 5, 6, 10, 46, 7, 5, and 9, with a mean of 12.6. Estimated mid-latitude A indices were 4, 5, 8, 32, 6, 4, and 7, with a mean of 9.4.

There is mention on the right side of the Vines website that says "frn.net
expired on 03/09/2013 and is pending renewal or deletion".

So maybe they'll be back if they get the site renewed.

This A Book That Was Written By Our Great Leader --- Ayman al-Zawahiri
--- I encourage you to download it and read it ------

The Name Of This Book Is ------ "Knights Under The Prophet's Banner"
------

http://azelin.files.wordpress.com/2010/11/6759609-knights-under-the-prophet-banner.pdf
......

This a PDF file ------ It Is Safe ------ I Downloaded It And Began
Reading It ------

Together ------ And ONLY Together ------ We Can Defeat The Criminals
Who Are Destroying Our Great Nation ------

The Enemies Of The United States Include ------

(1) The Walton Family of Bentonville, Arkansas ------ The Walton
Family are single-handedly responsible for turning ALL RETAIL JOBS
into MINIMUM WAGE JOBS here in the United States.

(2) ALL of the CRIMINALS who work on WALL STREET ------ They are
stealing everything they can from the working poor.

(3) ALL of the OIL COMPANY EXECUTIVES ------ They are killing every
living thing on our planet ------ All in the name of money ------ They
artificially inflate the price of gas so they can make BILLIONS OF
DOLLARS ------ ALL FOR THEMSELVES.

There are MANY others who belong on the list ......

This past Saturday night, The Great Liberty Nit-Wit-Net opened
with . .

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Later in the evening, the discussion moved on to other topics
like ...

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Finally in the wee hours of Sunday morning,
The Great Liberty Nit-Wit- Net ended with ..

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

As usual we thank net control and the dozens of check-ins for having
this magnificent discussion and we look forward to the next episode if
The Great Liberty Nit-Wit-Net.

Source record: 248570

Liberty Net: March 16, 2013

http://3950.net/2013/03/liberty-net-march-16-2013/

by Kevin Strom, WB4AIO

THERE ARE SO MANY check-ins to the Liberty Net each week that a little bit of patience might be required, at least for the first couple of rounds, as you wait for your turn. The Net Control Station, Vic, W1WCR, will check you in and place you into a first-come first-served list. Then, each station in turn is called and invited to introduce topics or make comments on topics introduced by others. Several hours into the net, Vic will usually announce the beginning of the more informal ï¿½roundtable mode,ï¿½ during which free-swinging discussions often ensue.

Here are a few of the topics that were brought up for consideration during this weekï¿½s Liberty Net:

ï¿½ Why is Abraham Lincoln being promoted so intensely by the controlled media lately? He brazenly violated the Constitution, wantonly killed hundreds of thousands of innocent Americans who only wanted independence, arrested and imprisoned legislators he thought were about to ï¿½vote wrongly,ï¿½ and greatly empowered the cancerous, illegal federal monster in Washington. (16 minutes)

ï¿½ A huge and growing percentage of the population is now connected to some kind of government money stream, whether it be Social Security that weï¿½ve paid into, disability, ï¿½grants,ï¿½ outright welfare, or numberless programs most of us arenï¿½t even aware of ï¿½ so much so that many believe the System will soon become unsustainable. The really ominous thing is the large number of productive White people who are now effectively ï¿½on strikeï¿½ and refuse to support a system they donï¿½t believe in anymore. (28 minutes)

ï¿½ There is something wrong with the mentality of people who disfigure and mutilate their bodies for ï¿½decorationï¿½ or as supposed ï¿½art.ï¿½ We are supposed to be the inheritors of the unbroken aesthetic of classical Greece, in which the healthy ï¿½ and unaltered ï¿½ human form is the ideal. Now we have embraced an aesthetic of deformation and ugliness. (34 minutes)

ï¿½ Why do taxpayers need to fund a federal ï¿½Price Protection Teamï¿½ with thousands of billions of dollars to prop up the stock market, when said market would naturally fall like a rock in a truly free system? Who owns the securities, and controls the proxies, that are purchased with all this stolen money? And where is the authorization

for this kind of illegal nonsense in the Constitution? (39 minutes)

ï¿½ If our immigration laws were enforced ï¿½ and if we re-instituted race-based citizenship like we had for almost all of our nationï¿½s history ï¿½ the unemployment problem would disappear overnight. (49 minutes)

ï¿½ Did you ever notice that members of the elite almost never get tattoos or piercings? Are these markings really a way of encouraging the worker-slaves to ï¿½brandï¿½ themselves as being part of the lower classes? Perhaps such disfigurement is also encouraged as a way for self-hating young White people to reject and obscure their Whiteness. (1 hour 8 minutes)

ï¿½ How many retirees know that the criminals in Congress have raided all the money in the so-called ï¿½Social Security Trust Fundï¿½ and replaced it with worthless zero-yield IOUs? (2 hours 34 minutes)

ï¿½ With the regime in Washington doing very little that is not flagrantly illegal, murderous, and treasonous, itï¿½s long past time to start over again from zero. (2 hours 39 minutes)

Remember that you can find ï¿½ and check in to ï¿½ the Liberty Net on a clear frequency around 3950-4000 kHz LSB every Saturday night at 10PM Eastern Time. Or you can listen live on the Internet at the ï¿½Liberty Net liveï¿½ links in the left column of this site ï¿½ and listen at your leisure anytime via the mp3 files posted here at http://3950.net every week.

Thanks to W1WCR for running the Liberty Net, and thanks to all of you for checking in and making the net what it is today!

As usual, we are happy to provide a less wordy but more accurate account of this past Great Liberty Nit-Wit-Net than Kevin.

For your convenience and improved understanding, we summarize as follows:

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

There - all better now.

```
:Product: Weekly Highlights and Forecasts
:Issued: 2013 Mar 25 0252 UTC
# Prepared by the US Dept. of Commerce, NOAA, Space Weather Prediction Center
# Product description and SWPC contact on the Web
# http://www.swpc.noaa.gov/weekly.html
#
# Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
18 - 24 March 2013

Solar activity was very low to moderate. Low activity dominated the
week with low level C-class flares observed on 18-20 and March.
Activity increased to moderate levels on 21 March when Region 1692
(N09, L=077, class/area Dki/340 on 20 Mar) produced an M1flare at
21/2204 UTC. A filament eruption was observed around 19/1400 UTC
from the area surrounding Region 1695 (N10, L=055, class/area
Dao/180 on 18 Mar). A faint Earth-directed CME was associated with
this event, as well as Type II (850 km/s) and Type IV radio sweeps.
The period ended with very low levels on 23-24 March.

No proton events were observed at geosynchronous orbit. The period
began with slightly enhanced proton levels due to residual effects
from the 15 March CME but returned to background levels by 19 March.

The greater than 2 MeV electron flux at geosynchronous orbit was at
moderate to high levels. Moderate levels were observed on 18-19
March followed by an increase to high levels on 20-23 March reaching
a peak flux of 3,880 particle flux units (pfu) at 22/1640 UTC. Flux
decayed to moderate levels on 24 March.

Geomagnetic field activity was at quiet to active levels. The period
began with mostly quiet conditions from 18-20 March. An increase to
quiet to active levels was observed on 21 March due to effects from
the two CMEs related to filament activity on 17 March. Quiet
conditions prevailed for the remainder of the period with the
exception of an isolated active period at the close of 23 March.
This increase in activity was possibly related to the weak CME
observed on 19 March.

Forecast of Solar and Geomagnetic Activity
25 March - 20 April 2013

Solar activity is expected to be very low to low throughout the
period. A slight chance for M-class activity is possible from 01-13
```

April when old Regions 1692, 1696 (N04, L=095) and 1698 (S19, L=118) return to the visible disk.

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to begin the period at normal to moderate levels. High levels are expected from 29 March-04 April due to recurrent coronal hole high speed stream effects (CH HSS). A return to normal to moderate levels is expected for the remainder of the period.

Geomagnetic field activity is expected to begin the period at moslty quiet levels. Quiet to active conditions with a chance for minor storm periods are expected on 28-30 March due to recurrent CH HSS effects.

Google,,, The best newsreaders Doesn't hurt to read up on them. I am sort of kind of thinking about buying me a Velocity Micro Edge Mini computer. Can't decide on the Windows 7 or the Windows 8 version. Microsoft will support Windows 7 untill 2020. I think I am leaning toward the Windows 8 thingy. http://www.velocitymicro.com Google,,, Velocity Micro Edge Mini Youtube

I don't get a lot of time at home, too much work.
And, I don't really listen to Alex Jones, almost never.
But, with snow here, and no conditions, I turned the
wrack-job on for a few. I think I finally figured him
out. He is standing up for the Cock-brothers. So, he
is a bit more than a wrack-job, I think he is a "neocon"
undercover you see. If it talks like a duck.etc.etc.
That does explain a few things about him. And now I
know where his money comes from. Neat and tidie.
Any comments?

Drifter...

Looks cool. Could use something like that to run my SDR.

I think the main advantage of Windows 8 is touch screen capability. Not
sure if there are any other advantages. I will check Youtube. More
later.

You did not miss much. Tribute to some boxer who died in 1963.

Best part was he had to sign off when his kid came in and started trying to get in on the broadcast.

The good news is, you didn't overpay. The bad news is this isn't much
of a radio. DX-302 is a much better terrible radio.

DX-300 is, as you've noticed, is a Wadley Loop. It's pretty stable.
And, as far as sensitivity goes, it could be much, MUCH worse. Grundig's
YB-500, comes to mind as an example.

Audio is pretty unpleasant. A better speaker, and a bit of acoustic
padding inside will take out some of the harsh resonances. Change a few

coupling capacitors in the audio stage, and you can broaden the audio bandwidth, and smooth out some of the harshness.

But broad bandwidth is really the issue with this radio. Selectivity is so wide, the lower sideband starts on the radio sitting next to it on the left. The 'Wide/Narrow' switch does little but drop a bypass capacitor in the audio path, taking the top off the frequency response. In the days of crowded SWBC bands, this radio could reliably receive 4 stations at once. DX-302 fixed this. Sort of. With filters. Better filters in later production runs.

GRE made this radio. And it's not their best work. It's not the paperweight that many call it. That would just be insulting to paperweights. It's good for a ball game on WGN, once the audio is addressed. But if you're planning on working the bands...not exactly your most effective tool.

Now, what can be done? Lots, actually. It's pretty susceptible to overload. So, keep the antenna short. 20 feet, in some areas may be too much. Work against a good earth ground. Since cold water pipes are no longer subject to the same codes as in years past, a cold water pipe may not be a reliable ground. You'll have to install a ground rod. 8' is good. 12' may be better, depending on soil moisture and height of the water table.

A radio of this vintage will have capacitor problems. There will be a few, if not many, electrolytics that are out of tolerance, or failing. Replace them. Replace them all. Do it now. Do not hesitate. The radio police are looking in your windows at this moment, and if they find you've got a radio that's subpar, with bad electrolytics, they'll send you to Al Gore's house to explain to him the meaning of the words 'electricity conservation.' As bad as that is, he may also eat you. The way Mary-Chapin Carpenter ate her fan club. Or Wynonna ate an Old Country Buffet in Henderson.

After replacing the caps, and you may want to replace some of the non-electrolytics, as well...especially ceramic discs in the audio stage, they have a terrifically bad sonic signature, and you will noticed the difference. Particularly on hard consonants when up on the bands. This is one of the many shortcomings of R-71, too, so you're in good company.

And, you'll want to install some filters. Murata ceramics are fine. There are procedures on the web to show you what needs to be changed, and how to do it. Not tough to do, but it can be time consuming. Take at least a week's vacation. And get some rum. Bermuda is preferred. And some fresh ginger. Infuse the ginger into the rum for at least 24 hours before you begin. The more the better. It should burn all the way down.

After installing filters, an alignment is a good idea. GRE radios of this vintage are not particularly good at holding an alignment. So, you'll want to make sure that the radio has come up to constant

temperature before beginning. In a warm room.

You may have to do this more than once over the life of the radio.
It's not uncommon.

Clean the switches. Replace the pots. Give the case a good cleaning.

And enjoy it. After a week, put it on eBay, and buy a DX-302 with the
proceeds. You'll marvel at the difference.

Until someone puts you in front of a Drake.

:)

That's the most well-written thing I've seen on this newsgroup in
years. Imagine what you could write if inspired by a Racal. Or Bryce
Dallas Howard.

73,

Kevin.

South Korean people in The Great Land Mass, of course they are keeping in
touch with their people in South Korea. (I saw it on local yokal backwater
hick tee vee noos last night) They say thingys in South Korea are normal.

I really have seen nothing out of the ordinary here. The bellicose nature of
the DPRK government has been a standard feature for so long the S. Koreans
set their watches by which threat comes from the north.

The Numbers racket. They (''They'') ring my Uniden DECT land line phone. I squint my eyes at that little bitty Caller ID screen on there. PIZZ on em! I don't answer my phone. There are ony three people I ever answer my phone for, and they almost never call me. That's the way I like it too. Phones are a damn nuisance.

Google,,, South Koreans in Mississippi Some of them are in Colleges over here, some of them own their own businesses over here. One of my Nephews was in the U.S.Air Force back in the 1970s. He married a South Korean gal. They live in the Oklahoma City area. delicast.com has some links to some South Korea TV channels. I was watching one of them earlier today.

Oh look:

To allow users of phase tracking receivers time to adjust, the
phase-modulated time code was initially omitted twice daily for 30
minutes, beginning at noon and midnight Mountain Standard time (07:00
and 19:00 UTC). This provided enough opportunity for a receiver to lock
on to the WWVB carrier phase.[7]:4 This allowance was removed as of
March 21, 2013.[11]
[edit] -wikipedia "wwvb"

So first Y-Man - the proclaimer - goes AWOL .. for YEARS ! ! !

Then Kevin - the reviewer - goes missing a few weeks now.

Last time we listened, there were maybe 2 check-ins.

And no amount of BOLO notices will turn up Chicken Fornicator for a visit check-in.

So what fun is it to listen to 3 guys going ..

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

Yeah - like I said - The Great Liberty Nit-Wit-Net is about to fade from the ham bands.

761. Latest Liberty Net via WB4AIO

Newsgroup: rec.radio.shortwave
Date: 2013-04-14 01:11:50 UTC
From: Kevin Alfred Strom <kevin.strom@revilo-oliver.com>
Message-ID: <kkcvoo$k36$1@speranza.aioe.org>
Source record: 248753

(Sorry my rec.radio.shortwave posting wasn't made last week; I was spending some time with a wonderful young lady in a place with no Usenet access. I did publish a Liberty Net article, though, which can be found here:

http://3950.net/2013/04/liberty-net-march-30-2013/)

Liberty Net: April 6, 2013

http://3950.net/2013/04/liberty-net-april-6-2013/

by Kevin Strom, WB4AIO

BEING ALIVE in these times is an extraordinary gift; the ability to learn from and communicate with creative, intelligent, and insightful people is almost unlimited. One of the pioneers in electronic social networking is amateur radioï¿½s Liberty Net, sharing ideas and uncensored information over the airwaves since 1974.

Hereï¿½s a selection from the issues brought up this time on the Liberty Net:

ï¿½ The fact that you can now be charged with a crime for ï¿½failure to buy insuranceï¿½ is a sure sign that the US Constitution is dead, dead, dead. (2 minutes)

ï¿½ Since the start of the ï¿½war on povertyï¿½ a half century ago, 15 trillion dollars have been wasted and the percentage of the poverty-stricken has not changed one iota ï¿½ and their absolute numbers have increased. What should we learn from this? 1) Some people are genetically less well-endowed than others, and no amount of help or education can change this; and 2) the regime in Washington cannot be trusted in any way. Their agenda was never to help anyone, anyway ï¿½ it was to enslave and impoverish us. (20 minutes)

ï¿½ A tipping point has now been reached where the people who work for a living are outnumbered by those who vote for a living. (24 minutes)

ï¿½ In addition to exterminating us, one of the major reasons the oligarchs are bringing peon labor by the millions into every White country is to drive down wages to a subsistence level. (30 minutes)

ï¿½ Feminism is absolute poison for our people, men and women alike. Why would White women, with the highest and noblest calling in the history of the universe ï¿½ the raising and acculturation of the next generation of our people ï¿½ want to fight in squalid bankersï¿½ wars in the military, or sell useless junk to clueless chumps in the ï¿½businessï¿½ world? (48 minutes)

ï¿½ In these bad economic times with jobs so scarce, almost no one wants more non-White immigration ï¿½ even many non-Whites donï¿½t want it! Yet more and more immigration is what we get. And almost no one wants to ï¿½bail outï¿½ billionaire bankers. Yet free money for bankers is exactly what we get. Doesnï¿½t this suggest that we are not in any sense a democracy or a republic, but are actually ruled by a secret oligarchy? (1 hour 24 minutes)

ï¿½ The Washington regime is now specifically targeting rural Whites ï¿½ a group among which a large percentage are able to live off the land and pride themselves on that ability ï¿½ for recruitment as food stamp recipients. Is the regime suddenly feeling generous? Or do they want to foster dependence and eliminate self-reliance? (1 hour 34 minutes)

ï¿½ The illegal regime is now in the process of hiring an army of 150 to 200 thousand ï¿½facilitatorsï¿½ to ï¿½explainï¿½ (and enforce) the new and (they hope) inescapable health care monopoly. (1 hour 38 minutes)

The Liberty Net ï¿½ amateur radioï¿½s longest-running current events discussion net ï¿½ is on the air every Saturday night at 10PM Eastern Time on or around 3950 kHz SSB (usually higher in frequency to avoid interference). You might have to tune around, but weï¿½re not hard to find.

Remember, thanks to our multiple audio feeds, youï¿½re likely to be nearly interference-proof! So please check in. And, as always, you can download the net recording right here at http://3950.net and listen at your leisure.

The Constitution is dead?

Not to worry. An exact quote from our past Republican president, George W. Bush: "The Constitution is just a piece of paper".

Now, how can you argue with that kind of logic from such a great intellect?

It was a Republican -- Lincoln -- who actually arrested and
imprisoned the members of a state legislature who he suspected were
about to "vote wrongly." Talk about unconstitutional!

The trashing of the constitution has gotten so bad that we now have
achieved _precisely_ what the founders were striving to avoid: an
omnipotent legislature that can pass any law whatsoever that gets a
majority vote, even ones taking away our freedoms and granting
massive new unheard-of powers to the state; and the executive can
create any office or power it can get away with, and imprison and
even kill anyone it chooses on the slightest pretext; with the
government entirely subservient to the largely-alien money power.

With all good wishes,

Kevin Alfred Strom.

Some of those 1960s and 1970s adult 'tearjerker'' songs/music are pretty amazing, if you really look into them. I remember a lot of old, old songs, but I have a bad time trying to remember the lyrics/words of those songs. Whenever I do happen to remember a word or two or three of them, I get to looking them up on the Internet. Sometimes that works real good.

Is there nothing global warming can’t do? A dozen Democrats are calling for action on global warming because it might cause women to become hookers.

http://thehill.com/blogs/floor-action/house/296679-dems-warn-climate-change-could-drive-women-to-transactional-sex

I shouldn’t be surprised by this idiocy. These are the same politicians that voted for Obamacare without even reading the bill.

> I picked up a new Radioshack DX-399 over the weekend. These are on clearance, marked down to $39.97 from $150. Overall I've been very pleased with it, and quite surprised at this little radio's performance, considering its cheap price. It's small and light, comes with a carrying pouch, and includes an AC adapter. For under $40 you are getting a dual conversion radio with 1 kHz tuning from 153 Khz - 29.999 Mhz. This is the same radio as the Sangean ATS-606, and seems like the perfect travel companion. For the price, I don't think it can be beat. Radioshack part number is 20-229. For better performance just hook up a 20 feet wire to its external antenna connection (Radioshack 278-1374 is a good choice).Ali.

Givn the age of this post, I will be pleasantly surprised for a reply. I have the RS DX-399 but the speaker is most likely blown out (very scratchy... sounds good thru earphones). Anyone have any idea how to get to the speaker? Thanks.

It would have been over a lot sooner if the war mongers hadn't
murdered Kennedy.

I was surprised when Washington finally admitted that the Gulf of
Tonkin incident was a lie. Like WMD...

Then why did you reply to a 2002 post?

If you actualy have a question, don't go looking for an ancient thread to reply to, start a new one. Just because google hasnt' fixed the bug that allows replies to posts older than 30 days doesn't mean every idiot should be replying to old posts. Use some common sense.

Michael

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. For multi-use bands, primary usage is shown. Some stations operate outside official bands. Information is from Oct 2008 FCC rules and Sep 2009 NTIA manual, see Chapter 4 of:
http://www.ntia.doc.gov/osmhome/redbook/redbook.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area.
Telephone lines present a potential shock hazard. Do not use this antenna
for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving
antenna. Performance will vary depending on the kind of phone line you
have. Overhead lines usually make okay antennas, while underground lines
| usually don't. Phone lines carrying DSL service may be unsuitable because
| DSL operates over a wide spectrum. A phone line antenna will generally
pick up more power line noise than a dedicated antenna, so don't expect to
| use it for DX work. Nevertheless, I found that it outperformed the
| telescopic whip antennas built into many portables.

A reader sent in this suggestion: If you're concerned about connecting
the phone line directly to the receiver, try wrapping the phone cord
several times around the receiver's telescopic whip antenna instead.
Performance may not be as good as a direct connection, but it will
probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought
much about it because thunderstorms are rare in my area. Most phone lines
have lightning arrestors on them where they enter the house, but the
lightning arrestors may pass enough energy during a lightning strike
damage a receiver. My suggestion is to disconnect the antenna when not in
use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and
receiver. The capacitor eliminates all phone line voltages, including
| ringing, so that they will not harm the receiver. The capacitor should
| be rated 250 volts or higher.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be
| purchased from shortwave dealers (see below for recommendations).

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

These filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

```
| RECOMMENDED FILTERS
|
| If you don't want to make your own filters, the following have good
| performance, are well-built and affordable:
|
| Model 400 BCB interference filter (3.5 MHz highpass)
| http://www.iceradioproducts.com/filtersrf.html#bcb
|
```

| Model 420 HF lowpass filter (30 MHz lowpass)
| http://www.iceradioproducts.com/filtersrf.html#3
| (scroll down a bit to see the model 420)
|
| If you have a random-wire antenna, the following unit will provide
| impedance matching and lightning protection (connect antenna to 450-ohm
| terminal):
|
| Model 182A beverage matching unit
| http://www.iceradioproducts.com/reconly.html#Beverage Matching

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)
Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.

```
--------||---+----||-----+----||-----------
} }
{ {
} }
-------------+-----------+-----------------
```

The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB

1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

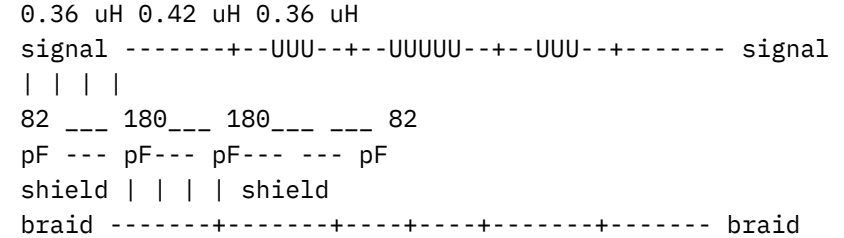
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



|
chassis ground

I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

Parts for the filters can be obtained from the following source:
http://www.digi-key.com/

weezer919.com http://weezer919.com/
.....

I have spent my entire life
struggling .....

I struggle to find money to live
on .....

I struggle to find a place to live ..... Every Single Goddamn
Month .....

I struggle to not be alone ..... To meet
people .....

The United States is this Giant Ocean of
Wealth .....

But Only A Small Elite Few Are Allowed To Own
It .....

When The Walton Family of Bentonville, Arkansas decide to pay their
employees $7.00 an hour .....

To Operate A Store That Generates $122 MILLION Dollars A
Year .....

Do You Know What Happens To All Those Millions Of Dollars Of
Profit ??????????????

FOR JUST ONE STORE ?$?$?$?$?$?$?$?$?$?

Do You Know Where All That Money
Goes ??????????????????????????

All Those Billions Of Dollars Go STRAIGHT INTO THE WALTON FAMILY'S BIG
FAT BANK ACCOUNTS !!!!!!!!!!!!!!!!!!!!!!!!!!!!

Do You Know Why ?$?$?$?$?$?$?$?$?$?$?$?
$?

America Is Full Of Lazy COWARDS Who Are Afraid To Fight
Back !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

The Walton Family of Bentonville, Arkansas STEAL MONEY FROM YOU
BECAUSE YOU ALLOW THEM
TO !!

The United States Is Full OF
COWARDS !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

You Make $7.00 An Hour For Grueling Hard Painful Work Because You Are
TOO COWARDLY TO DEMAND
MORE !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

WALMART STEALS FROM YOU BECAUSE YOU ALLOW THEM
TO !!!!!!!!!!!!!!!!!!!!!!

The Overseas Employees Of The Companies Who Make All That Cheap Crap
That You Purchase At Walmart Suffer Even Worse Than You
Do ....

SNIP

Was not your computer made in China??????????????????????

QST de W1AW
Propagation Forecast Bulletin 18 ARLP018
>From Tad Cook, K7RA
Seattle, WA May 3, 2013
To all radio amateurs

SB PROP ARL ARLP018
ARLP018 Propagation de K7RA

Solar activity made a healthy jump over the past week, with average daily sunspot numbers up over 30 points to 120.9, and average daily solar flux increasing over 27 points to 136.5.

The most active day for geomagnetic indices was May 1, when the planetary A index reached 21 and the high-latitude college A index (measured near Fairbanks, Alaska) was a whopping 57. That number has been higher, but only twice in the past six months, when it was 64 on March 1 and 79 on March 17.

The latest forecast has solar flux at 155 on May 3-4, 150 on May 5-6, 145 on May 7-9, then 140, 125 and 120 on May 10-12, 125 on May 13-15, 120 on May 16-17, then 125, 120, and 130 on May 18-20, 135 on May 21-22 and 130 on May 23-24.

Predicted planetary A index is 8 on May 3-4, 12 on May 5, 8 on May 6, 5 on May 7-20, then 15, 10 and 15 on May 21-23, and then 5 forever after that. This is from a 45 day forecast, so we won't really see quiet conditions forever, but the forecast ends on June 16 with planetary A index of 5 until then.

F.K. Janda, OK1HH has another short forecast for geomagnetic conditions, like last week. He sees the geomagnetic field quiet to unsettled May 3-10, quiet to active May 11-12, and quiet to unsettled May 13-19. That's it!

NASA released a new solar cycle prediction on May 1, but it wasn't really new. These arrive at the start of every month, and remain the same since March 1. On March 1, 2013 the prediction for the smoothed International Sunspot Number at the cycle peak shifted from 69 to 66 for Fall 2013. The 2013 Autumnal Equinox begins in about four months and three weeks. This week the May 2013 issue of CQ Magazine arrived, and across the top of the cover was this headline: "Another

Double-Peak Sunspot Cycle?" We certainly hope so.

Time to review our 3-month moving average of sunspot numbers, which has increased. The average daily sunspot number for February, March and April was 85.2. The average daily sunspot number for the three month periods centered on September 2012 through March 2013 were 81.2, 82.3, 74.4, 82.8, 73.6, 80.7 and 85.2. This is a moving average, so 81.2 was the average for August through October 2012, 82.3 was September through November 2012 and so on. But this involves a bit of cherry picking of the data, as the three previous period's averages were 96.5, 91.9 and 89.9.

The average sunspot number for the month of April was 112.8, for March it was 81.1 and February was 60.1.

Eric Ferguson, VE3CR of Burlington, Ontario sent his father-in-law Bruce Jones an article about solar flares, and they both wondered why there are no solar flares at the Sun's poles.

I passed this question on to Robert Steenburgh, KA8JBY who is a Senior Space Weather Forecaster at the NOAA Space Weather Prediction Center.

Robert wrote, "Flares are thought to originate from the deformation of magnetic field lines which break and reconnect. There is a latitudinal band in which this magnetic flux emergence (and hence sunspot formation) and deformation occurs.

"Sunspots typically form at mid-latitudes (equatorward of around 40 degrees) at the beginning of the solar cycle, and the breeding grounds drift towards the equator over the course of the cycle. This behavior is attributed to the solar dynamo. See http://solarscience.msfc.nasa.gov/dynamo.shtml.

"A cartoon depiction of the dynamo process is here:

http://www.nasa.gov/images/content/144061main_CycleDiagramLG.jpg

"You can find a paper on flare distribution for Solar Cycle 23 here:

http://www.ias.ac.in/jaa/junsep2006/JAA10.pdf

"There were 4 flares identified poleward of 50 degrees latitude in that paper, out of a total of 20,186.

"The poles are usually dominated by coronal holes and 'open' magnetic field lines that extend out into the heliosphere. So the mechanisms for flare formation are generally absent."

David Moore sent a link to a NASA video showing ten coronal mass ejections over five days in April:

http://www.nasa.gov/multimedia/videogallery/index.html?media_id=162261751

Mike Snyder, KN8J who lives a few miles south of Harrisville, West Virginia in EM99lf wrote this morning, May 3: "My wife and I are early risers. I mean real early. We're up about 3AM. Generally speaking, 3 to 5AM produces some fair DX for me.

"Lately it's been getting a bit better on the 20 and 30 meter bands. The South Pacific is usually open at these hours. I've managed a couple QRP contacts with Hawaii. I've noticed parts of Europe open as well. I had a solid QSO with OK1HB from the Czech Republic on 14.062MHz. I was running 100 watts barefoot for this one.

"This morning I finally worked a new one: A35JP in Tonga on 14.003 MHz running up two at 0736 UTC.

"Well, gotta go...someone just spotted FO/KH0PR!"

Mike runs a Cushcraft A4 antenna on a 40 foot tower with the two rear elements askew due to high winds last month. On 160 and 30 meters he uses a fan inverted vee dipole at 35 feet.

He sent this final note: "Just worked A35UD on 10.108 MHz at 1010 UTC. Too bad I gotta go to work now!"

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net.

For more information concerning radio propagation, see the ARRL Technical Information Service web page at http://arrl.org/propagation-of-rf-signals. For an explanation of the numbers used in this bulletin, see http://arrl.org/the-sun-the-earth-the-ionosphere. An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. More good information and tutorials on propagation are at http://k9la.us/.

Monthly propagation charts between four USA regions and twelve overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are at http://arrl.org/bulletins.

Sunspot numbers for April 25 through May 1 were 93, 104, 100, 97, 136, 165, and 151, with a mean of 120.9. 10.7 cm flux was 119.2, 121.9, 127, 131.7, 142.4, 154.4, and 159.2, with a mean of 136.5. Estimated planetary A indices were 8, 17, 6, 5, 5, 7, and 21, with a mean of 9.9. Estimated mid-latitude A indices were 14, 18, 6, 4, 5, 6, and 16, with a mean of 9.9.

Liberty Net: April 27, 2013

http://3950.net/2013/05/liberty-net-april-27-2013/

by Kevin Strom, WB4AIO

THE NEW Midweek Liberty Net, after only two sessions ï¿½ Wednesdays at 9PM Eastern ï¿½ is attracting enough participants to almost equal our Saturday session in terms of length ï¿½ over four hours of conversations last time!

Here are some of the ideas brought up for debate on the Liberty Net this week:

ï¿½ If the intelligence agencies can bring a city to its knees ï¿½ and get almost any new nationwide ï¿½securityï¿½ laws they want ï¿½ just by deploying a couple of patsies with backpacks, just imagine what they could do with a bigger operation. (13 minutes)

ï¿½ The recent media-fueled rehabilitation of the reputation of mass murderer and traitor George W. Bush is reprehensible and disgusting. (34 minutes)

ï¿½ Donï¿½t be fooled into believing that Fox News is some kind of ï¿½conservative alternative.ï¿½ Fox is in the forefront of subverting conservatism and turning it into a war-mongering internationalist ï¿½national security stateï¿½ creed ï¿½ and thatï¿½s not surprising, considering that Fox is owned by uber-Zionist oligarch Rupert Murdoch. (43 minutes)

ï¿½ The CSA has risen again ï¿½ but this time ï¿½CSAï¿½ stands for the Corrupt States of America: An employee whose job is to deliver ï¿½Obama phonesï¿½ reports that there are many apparent regularities in the program. For just one example, he delivered 600 of the ï¿½freeï¿½ phones to a single address. (54 minutes)

ï¿½ Thereï¿½s a lot of debate about whether or not the Boston bombing was a false flag event. Even the suspectsï¿½ mother says that the FBI were following and controlling her sons ï¿½for yearsï¿½ ï¿½ so itï¿½s quite possible that there was intelligence agency involvement. But some conspiracy theories are indeed fantastically speculative. Could the more outlandish theories be planted specifically to discredit anyone who questions the official story? (1 hour 1 minutes)

ï¿½ The best way to end the insane wars weï¿½re fighting against Muslim countries would be a mutual agreement for both sides to stay out of each otherï¿½s countries. But the third party which wants all these

wars wonï¿½t allow that. (1 hour 26 minutes)

ï¿½ Some establishment politicians, like Nancy Pelosi and John McCain, have set up pages on social media sites like Facebook. They post puff pieces about themselves, but there is almost no dialogue at all. When critics of the crooked pols speak out on these pages, they are either ignored, vilified, or censored. It is amusing, though, to see how practically no one supports the politicians. (1 hour 32 minutes)

ï¿½ Recent overt and covert government interventions in the markets have caused a dip in the price of gold. Some observers are saying that this was done to facilitate a payoff to China for reigning in North Korea. (1 hours 40 minutes)

Thanks to N2SAG and N2IRJ and W1WCR, you can listen to the Liberty Net every week ï¿½ somewhere near 3950 kHz, plus or minus the interference (lately, substantially above that frequency) ï¿½ every Saturday night at 10PM Eastern Time (and every Wednesday at 9PM), and also via the Internet. You can also download the Liberty Net right here at http://3950.net and listen in your car, at work, or wherever you like. Check in on the air and join the excitement!

One of the cars my brother owned in 1959 was a 1957 Mercury Turnpike Cruiser. I used to look at that car and think it was a Spaceship from another Planet. My 1914 Ford Model T Runabout Roadster car will be one hundred years old next year. Google,,, oldcarbrochures (sumpin like that)

I drive a 1977 Buick LeSabre that I picked up 10 years ago with 63k miles on it. It had been stored,
and really owned by a little old lady.

Very nice shape, and I now have 118k on it.

I paid $600 for it.

So, I did a Google for, 1977 Buick LeSabre cars. There are some Youtube videos there too. Other than old antique/vintage cars/trucks/motorcycles of all brand names regardless of where in the World they were made, my favorite looking Buicks are the 1958 Buicks. I have never owned a Buick before. Google,,, History of Buick cars David Dunbar Buick (the founder of Buick cars) invented/developed a method of putting porcelain on iron thingys. Bathtubs/sinks/ecetera....

844. Weekly Highlights of Solar and Geomagnetic Activity, 29 April - 05 May 2013

# Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
29 April - 05 May 2013

Solar activity reached high levels this week when Region 1739 (N13,
L=75, class/area=Dac/150 on 03 May) appeared on the east limb and
unleashed an M5/Sf flare on 03 May at 1732Z. The flare was
accompaned by Type II (1297 km/s) and Type IV radio emissions. A
coronal mass ejection (CME) was subsequently observed in LASCO/C2
coronagraph imagery at 03/1748Z and also in STEREO-A and B COR2
imagery. Region 1739 was also responsible for an M1/Sf flare at
05/1756Z. The most prolific active region of the week was, by far,
Region 1731 (N09, L=187, class/area=Dkc/420 on 28 Apr) with 17
C-class and two M-class flares to its credit. By 30 Apr, Region 1731
had developed beta-gamma-delta magnetic characteristics which it
mainteined through 03 May. During this period it produced an M1/1n
flare at 02/0510Z and a long duration M1/2n flare at 03/1655Z. The
02 May event was associated with a tenflare (159 sfu), a Type II
emission (703 km/s), and a CME first seen in LASCO/C2 imagery at
02/0524Z. The majority of the ejecta was directed north of the
ecliptic, but output from the WSA-Enlil model suggested a possible
scrape from the CME on 06 May. The 03 May event was not associated
with a CME.

No proton events were observed at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit was at
high levels on 29-30 Apr and 03-04 May.

Geomagnetic field activity reached ensettled to active levels
beginning late on 30 Apr and lasting through 02 May. This activity
was in response to the presence of a recurrent negative polarity
coronal hole high speed stream. On 01 May, activity reached major
storm levels at high latitudes. Activity returned to quiet levels
early on 02 May. Conditions were quiet, with the exception of one
unsettled period during the latter half of 05 May with the arrival
of a corotating interaction region in advance of a positive polarity
```

recurrent coronal hole high speed stream.

Forecast of Solar and Geomagnetic Activity
06 May - 01 June 2013

Solar activity is expected to be at low levels with a chance for an isolated moderate or greater event for the extent of the outlook period.

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be high on 8-10 May and again on 24-31 May in response to recurrent coronal hole high speed streams.

Geomagnetic field activity is expected to be quiet to unsettled for the majority of the outlook period. Active levels are possible on 21-23 May in response to a recurrent coronal hole high speed stream.

But using my Little Orphan Annie Secret Decoder Ring, the message is, "Be
sure to drink your Ovaltine."

Evidently we have a conflict.

Have you guys discussed the apparent disappearance of Gold from the US
Reserve system? It appears the Germans want to get some huge amount of
bullion back from the New York bank and are being denied the privilige.

The bank is even denying the Germans the right to look at the Gold.
Looks to me like the Reserve has stolen everything.

mike

Yes, we have: "The state of Texas, like Germany, apparently suspects
that the gold allegedly held by the New York banks for depositors
isnï¿½t really there: They are demanding that the billion or so
dollars of gold held by these banks for the University of Texas
endowment fund be physically transferred to a new depository ï¿½ in
Texas."

Some analysts are now saying that large numbers of Wall Street
"paper gold" and "paper silver" instruments are totally fraudulent
too. Ever since the invention of fractional reserve banking by the
parasitic race, they have been addicted to the concept of living
without working by issuing pieces of paper promising to pay things
they can't deliver.

With my best,

Kevin.

I'm thinking that in this case "Ascension Day" would be the day that Christ
re-ascended to heaven after spending time with the disciples after the
resurrection.

I actually opened a couple of the coils up. It was easy as the bottom simply unscrews. Inside is a coil, a few caps, and what looks to be a trimmer of some sort. I doesn't seem like a simple coil with its litz wire and ferrite core. I'll see if I can't post a photo here somehow.

Source record: 248813

Icom IC-R1500 communications receiver, .01 MHz to 1300 MHz continuous coverage -- RARE REMOTE CONTROL HEAD!
Icom IC-2200H transceiver with wide receive, 65 watts.
Communications speakers
12 VDC, 12 amp DC power supply
Everything in MINT condition!
All professionally mounted in rack-mount chassis, but obviously you can use this on a benchtop/desktop if you wish!
This is a really good and useful rig, and the receiver can be controlled via PC or control head. I set it up this way so I can surf the airwaves on my PC (with bandpass filters, spectrum analyzer, and a host of other features), or run on no-PC battery ops in case the power went down.

Asking $500.

http://losangeles.craigslist.org/sgv/ele/3791584724.html

(not mine, unfortunately)

Doggy said... Google,,, What Subaru vehicles are made in Japan? Subaru formed a partnership with Toyota, some Subaru parts are made by Nissan. If the VIN number on your Subaru doesn't have a J as the first number, it was likely made in Laffayette,Indiana. There is a Subaru dealership about six miles East, behind doggy's couch. www.paulmoaksubaru.com I reckon Subarus are Good vehicles.

877. Obamacare Saved Americans $2.1 Billion in 2012

Newsgroup: rec.radio.shortwave
Date: 2013-06-17 13:28:19 UTC
From: QuiGon7x@webtv.net
Message-ID: <3535-51BF0EF3-5800@storefull-3251.bay.webtv.net>
Source record: 248869

Insurers Aren't Just Giving Out Rebate Checks Because Of Obamacare ☐
They're Lowering Premiums, Too

- Americans who bought individual health plans in 2012 saved $2.1 billion thanks to Obamacare consumer protections that limit how much insurers can profit off of Americans' premiums, according to a new study by the Kaiser Family Foundation (KFF).

The vast majority of those savings stem from individual health plan providers lowering the premiums they charge Americans in an effort to comply with the reform law.

The Kaiser study comes shortly after several major California insurers announced that they would have to pay back $36 million to small businesses and their employees after charging them too much.

Obamacare mandates that insurers on the individual market spend at least 80 percent of the premiums they charge on actual medical services, or reimburse the amount they overspent to their customers.

But insurers can avoid writing those checks after-the-fact if they just lower their premiums to begin with ☐ and KFF's study concludes that's what many individual plan providers have been doing. KFF estimates that individual market insurers lowered their premiums by $856 million in 2011 and by $1.9 billion in 2012 to comply with the so-called "80/20 rule".

SEE GRAPH of savings because of the Affordable Care Act (Obamacare):
http://thinkprogress.org/wp-content/uploads/2013/06/individual_market_mlr_savings-e1370622377752.png

The combination of these premium savings and rebate checks meant that Americans who bought their own insurance spent 7.5 percent less on their coverage in 2012 than they would have without Obamacare's consumer protections.

That's an important victory for consumers since individual insurance plans tend to offer meager benefits at high prices, especially to sick Americans.

Obamacare will also change that status quo soon enough. Once the law's main provisions go live in 2014, individual and small group health plans sold on its statewide insurance marketplaces must offer ten "essential health benefits" to consumers, including for mental health care, prescription drug, and maternity services.

Initial insurer bids for the marketplaces in several states have
indicated that premiums will be affordable, and even lower than what
many plans currently charge for far worse coverage.

```
:Product: Weekly Highlights and Forecasts
:Issued: 2013 Jun 17 0404 UTC
# Prepared by the US Dept. of Commerce, NOAA, Space Weather Prediction Center
# Product description and SWPC contact on the Web
# http://www.swpc.noaa.gov/weekly.html
#
# Weekly Highlights and Forecasts
#
Highlights of Solar and Geomagnetic Activity
10 - 16 June 2013

Solar activity was at very low to low levels during the period. The
period started off with an isolated C1/Sf flare at 10/1424 UTC from
Region 1765 (N08, L=052, class/area Dai/210 on 09 June). By 11 June,
Region 1765 was the only spotted region left on the visible disk but
only managed to produce several B-class flares. On 12 June, rapid
flux emergence was observed on the southwest quadrant of the solar
disk and was numbered as Region 1768 (S11, L=356, class/area Dko/320
on 14 June). Although 1768 was the largest region on the visible
disk during the rest of the period, it failed to produce any
substantial flare activity. Solar activity continued at very low
levels until early on 14 June, when Region 1769 (S22, L=261,
class/area Cro/020 on 14 June) produced a long duration C1/Sf flare
at 14/0031 UTC with an associated Type II radio sweep reported at
14/0021 UTC (431 km/s). Solar activity continued at low levels for
the rest of the period with an isolated long duration C1 flare at
15/0400 UTC from Region 1774 (S19, L=238, class/area Cro/030 on 16
June) and a C1/Sf from Region 1769 at 16/1020 UTC. No Earth-directed
coronal mass ejections were observed during the period.

No proton events were observed at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit reached
moderate levels through the period.

Geomagnetic field activity was at quiet to active levels. Unsettled
to active levels with an isolated minor storm period at high
latitudes was observed for the first half of 10 June due to possible
activity associated with a shock arrival from a non Earth-directed
CME from 07 June. During this time, total field (Bt) increased from
approximately 4 nT to 9 nT while the Bz component varied from +8 nT
to -8 nT before calming to more nominal levels by midday on 10 June.
Solar wind speed increased briefly on 10 June from approximately 350
km/s to 419 km/s by 10/1514 UTC before decreasing back to 360 km/s
```

by early 11 June. A slow increase in solar wind speed occurred on 11 to 12 June reaching maximum values near 476 km/s by 12/0430 UTC before declining to background levels through the rest of the period. The geomagnetic field was mostly quiet with an isolated unsettled period midday on 11 June. Conditions declined to quiet levels for the rest of the period.

Forecast of Solar and Geomagnetic Activity
17 June - 13 July 2013

Solar activity is expected to be at predominantly very low to low levels. There is a chance for M-class (R1-Minor) flares from 18 June through 08 July due to potential flare activity from old Region 1762 (S30, L=129) and two new regions observed in STEREO A/B EUVI 195 imagery located to the northwest of old Region 1765 (N08, L=052) and southwest of old Region 1757 (S08, L=148).

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be at high levels from 22 June through 07 July due to coronal hole high speed stream (CH HSS) activity. Normal to moderate levels are expected for 17-21 June and 08-13 July.

Geomagnetic field activity is expected to be quiet to unsettled on 17-18 June due to weak CH HSS activity. Mostly quiet conditions are expected on 19-20 June. A recurrent CH HSS is expected to become geoeffective from 21-24 June causing unsettled to active levels with a chance for minor storm (G1-Minor) conditions. Mostly quiet levels are expected from 25-27 June. From 28 June through 01 July, another CH HSS is expected to be geoeffective causing unsettled to minor storm (G1-Minor) levels. Quiet levels are expected to return from 02-04 July. On 05-06 July, a weaker CH HSS is expected to cause quiet to unsettled levels. From 07 July until the end of the forecast period, mostly quiet conditions are expected.

Ah leetle artikul enema mah snale male July, 2013 Popular Science mahgahzeen, anna hyhr issa wut it sez,, COSMOLOGY LESSON: LIGHT YEARS (DISTANCE) VS. YEARS (TIME) How can the visible Universe have a radius of 45 billionlight years old (''Armed Telescope,'' May 2013)? Dozens of readers wrote in with that question. Here's why that figure wasen't a typo: Two Galaxies, A (Red) and B (Blue) are moving away from each other as the spacetime between them expands. Galaxy A emits a ray of light (Black) that's headed toward Galaxy B. By the time the light from galaxy A reaches B, A has moved far beyond it's starting point. The farthest observable objects are 45 billion light years away, after just 14 billion years. FASTER THAN LIGHT? Because galaxies are carried apart by expanding spacetime... not by movement through space... the distance between them may grow at faster than light speeds. That is what the artikul sez, Bit, thangy T'IS<<<< THERE IS NO SUCH THING AS TIME!!!

It's Slim Whitman. Remember him? He died yesterday at 90. In the Mars Attacks movie, his Indian Love Call song made the Martians heads explode. Rest in Peace, Slim Whitman.

Liberty Net: June 15, 2013

http://3950.net/2013/06/liberty-net-june-15-2013/

by Kevin Strom, WB4AIO

THE LIBERTY NET is a spontaneous cultural phenomenon. Beholden to no commercial or political entity, it is a natural, voluntary community of communicators who see a need to share the truth as they see it. One factor that unites net participants ï¿½ and there are many ï¿½ is a deep and justified skepticism about pronouncements from governments and from the billionairesï¿½ media outlets.

Hereï¿½s a small selection of the issues brought up for debate on the Liberty Net this time:

ï¿½ The Washington regimeï¿½s ï¿½law enforcementï¿½ agencies are now totally politicized: Witness the IRS persecution of political dissidents, and the total lack of proper investigation and prosecution of the criminal IRS bureaucrats. This, however, is just the tip of the iceberg ï¿½ the FBI, CIA, JTTF, HSA, and NSA (among others) are all intensely politicized and relentlessly engage in illegal acts against dissidents. They are no longer legitimate or legal. (14 minutes)

ï¿½ David Hunt and John Bolton are both wildly over-the-top ï¿½consulting warmongersï¿½ for Fox News. They never met a war they didnï¿½t like. But suddenly, for the first time in a decade, they are getting cold feet about incinerating more Arabs. Whatï¿½s going on? Has Vladimir Putin put something on the table that has made the DC regime and its sycophants very, very afraid? (21 minutes)

ï¿½ The media coverage of whistleblower Edward Snowden seems to be focusing on all that Snowden has lost and may lose ï¿½ even, potentially, his freedom ï¿½ for his ï¿½crimeï¿½ of exposing the crimes of the NSA. Is this being purposely done to intimidate other incipient truth-tellers? (32 minutes)

ï¿½ The illegal Washington regime has been talking about establishing a ï¿½no fly zoneï¿½ in Syria. Leaving aside the absurdity of DC bureaucrats declaring that people in other countries canï¿½t fly in their own air space, so far itï¿½s all just talk. The reason: They know that a very likely result of such a pronouncement would be a skyful of Russian MIGs. (36 minutes)

ï¿½ More and more states ï¿½ possibly soon including Pennsylvania ï¿½ are enacting statutes nullifying all federal gun control and other unconstitutional ï¿½laws.ï¿½ Under the Pennsylvania bill, agents of the

regime in Washington violating the rights of citizens to bear arms would be guilty of a felony. (1 hour 1 minute)

ï¿½ Jeb Bush recently argued at a ï¿½Faith and Freedom Coalitionï¿½ conference that America ï¿½needsï¿½ more non-White immigrants, because non-Whites are superior to Whites in so many ways. This tells us all we need to know about the current conservative and evangelical movements. (1 hour 9 minutes)

ï¿½ Even some of the partyï¿½s own members now admit that if the Republican party is stupid enough to support the invasion-amnesty bill, it deserves to die. (1 hour 15 minutes)

ï¿½ With so much oil under the ground in North America, why do we fight endless ï¿½wars for oilï¿½ in the Middle East? The simple answer: We donï¿½t. These wars are for Israeli dominance; the Israeli lobby controls the Washington regime; and oil has almost nothing to do with it. (1 hour 39 minutes)

Remember that you can receive the Liberty Net in the area of 3950 kHz and above every Saturday night at 10PM Eastern Time, Wednesdays at 9PM, and donï¿½t forget the Survival Net at 9PM on Sundays ï¿½ or listen live on the Internet (see the two ï¿½Liberty Net Liveï¿½ links in the left column of this site for two live streaming sites with associated discussion rooms). And you can listen at your leisure via the mp3 files posted here at http://3950.net every week. Each nightï¿½s mp3 file is usually posted the next morning and will be visible that day in the upper right column of this site.

Once again, thanks to W1WCR for running this important and historic discussion net ï¿½ now in its 39th year ï¿½ and thanks also to N2IRJ for making these recordings available.

It's difficult to see how the ruling class can do anything other than
become more repressive, since the more it functions at a global level,
the more difficult it will find it to hide what it's doing, and the more
opposition it will face, despite the efforts of their media. It looks
very much as though the UK's and US's spooks have been spying on one
another's citizens and sharing their knowledge to weaken oversight. Will
the same arrangements be extended to the likes of Saudi Arabia and
Bahrain, with dissent anywhere being opposed?

The media are focussing on Snowden the man to avoid discussion of what
he has revealed about what our "representatives" are up to. Most of the
media are on the side of the oppressors anyway.

Wasn't it Bill Bruford who couldn't play the central instrumental section of Firth of Fifth? Or was it Robbery, Assault and Battery?

Chester Thompson notably plays tambourine on Firth of Fifth while Phil Collins plays the full drum kit in this version from 1977:

http://www.youtube.com/watch?v=gtk1HLrjGRs

He still hadn't learned it by 2007:

http://www.youtube.com/watch?v=hYZyDnQhxbA

While here we have from 1974 a version with a hesitant Tony Banks, and Peter Gabriel on vocals (not all the video fits with the sound):

http://www.youtube.com/watch?v=t7-qJ0afB_4

There's no video on this stupendous live version of Robbery, Assault and Battery, but it sounds like only one drum kit for almost all of the 13/8 section, though Thompson (or Bruford) join in at the end.

I'm aware of Bruford's work with Yes, which is very impressive, though he was replaced by Chester Thomson as Genesis' tour drummer. FWIW I consider both to be very fine drummers, but neither could play the irregular sections from Firth of Fifth or the 13-in-a-bar section of Robbery, Assault and Battery which Phil Collins lays with such ease. It's an unfashionable view, but I think Collins was a better drummer than either. I'd like to have heard Carl Palmer play with Genesis and Yes though.

You seem to be overlooking one small detail. When the story originally broke, the Tea Baggers were being investigated because they were violating the rules of their tax-free status by creating/sponsoring/paying for highly partisan TV commercials -- something organizations can NOT do and still maintain their tax-free status. Nothing to do with "persecution"; the IRS was just following rules and doing their job. The story took on a life of its own because the Repubs were intent on whipping up yet another bogus "scandal".

To make it perfectly clear, it is absolutely OK to create all the highly partisan commercials you want -- but just not as a "tax-free" organization.

"OK" is not defined by what the whoring criminals "enact," in my
view. The monster in Washington deserves nothing. It is illegal and
enforcing its rulings is a crime in itself.

With all good wishes,

Kevin Alfred Strom.

BBCWS annual broadcast to Antarctica on 21 June
Posted by: "Glenn Hauser" wghauser@yahoo.com wghauser
Date: Fri Jun 21, 2013 7:48 am ((PDT))

BBC website now has a page for this evening's broadcast at 2130 UTC which
confirms the three frequencies: 5965, 7350 and 9890:
http://www.bbc.co.uk/programmes/p01bcdj7/features/p01bcdj7

According to BBCWS schedule, earlier today "World Have Your Say" talks to the
team at Halley Research Station, Antartica (BBCWS 1705-1800 UTC):
http://www.bbc.co.uk/programmes/p00tbs7r

BAS posting today mentions the broadcast and midwinter celebrations by the 41
staff on their Antarctic bases:
http://www.antarctica.ac.uk/about_bas/news/news_story.php?id=2213
(Alan Pennington, England, 1110 UT June 21, BDXC-UK yg via DXLD)

Propagation Forecast Bulletin 25 ARLP025
>From Tad Cook, K7RA
Seattle, WA June 21, 2013
To all radio amateurs

SB PROP ARL ARLP025
ARLP025 Propagation de K7RA

Here we are at the Summer Solstice for the Northern Hemisphere, which was at 0504 UTC today, June 21. If you are west of the Central time zone, to you it was last evening. Today is the longest day of the year, but the length of your day varies considerably depending on your latitude. In San Diego, the sunrise is at 5:48 AM, and it sets 14 hours later at 7:53 PM. In Seattle the Sunrises today at 5:21 AM and sets at 9:01 PM, 15 hours and 40 minutes later. But in Fairbanks, Alaska, the Sun rises today at 3:39 AM and doesn't set until tomorrow at 12:06 AM, 20 hours and 27 minutes later!

Right now many of us are interested in what HF radio conditions should be for this weekend during ARRL Field Day. Until June 3, the prediction for June 21-23 was for quiet geomagnetic conditions, with a planetary A index of 5 for all three days. Then on June 3 it changed, and the predicted planetary A index for those days was 25, 18 and 10, quite a difference. On June 15 the forecast changed to 10, 18 and 10, then on June 19 it became 18, 12 and 8, and finally yesterday it changed to 25, 15 and 10, closer to what it was on June 3.

Remember, we want those numbers to be low.

You can check http://www.swpc.noaa.gov/ftpmenu/forecasts/45DF.html for daily updates after 2100 UTC, and at http://www.swpc.noaa.gov/ftpdir/latest/DGD.txt it is updated every three hours with new K indices.

As of Thursday afternoon, the predicted solar flux is 130 on June 21, 135 on June 22-24, 130 on June 25, 125 on June 26-27, 120 on June 28, 115 on June 29-30, hitting a minimum of 100 on July 5-7 and rising to a peak of 130 on July 19-21.

The predicted planetary A index is 25, 15 and 10 on June 21-23, 5 on June 24-27, then 30, 20, 10 and 8 on June 28 through July 1, then 5 on July 2-4, 10 on July 5-6, then 5 on July 7-13, and 8 on July 15-16.

Over the past week average daily sunspot numbers rose from 39.6 to 97, and average daily solar flux was up from 99.2 points to 115.3.

Petr Kolman, OK1MGW predicts quiet to active geomagnetic conditions June 21-23, quiet to unsettled June 24, quiet June 25-26, quiet to active June 27, active to disturbed June 28-29, quiet to unsettled June 30 through July 2, quiet to active July 3-4, and mostly quiet July 5-6.

Pavel Costa, CO7WT sent this observation: "In past winters I have noticed that when a cold front is passing over Cuba, the front of the wave some times acts as a very good reflector for VHF signals, precisely the 2 meter band that is commonly used here in Cuba for FM signals.

"As Cuba is a kind of thin and long island, the propagation behaves differently depending on the angle of the incoming cold front. Sometimes when the front comes perpendicular to the island, the propagation is good for signals bouncing off the front of the wave. Other times when the wave comes parallel to the island the propagation is improved island wide.

"This phenomenon is not always seen with all cold fronts, and its duration is from 1 to 4 hours for ranges about 100 to 500 Km, I have noticed.

"Last winter I remember a cold front that made possible communications from hand held radios on 2 meter simplex with rubber duck antennas from two locations around 100 km apart with about 5 watts. That was around last December, maybe E-skip helped that time, but I think the cold front was responsible for that."

K1KT, Ken Tata of Warwick, Rhode Island noted on June 18 an intense 2 meter opening in Europe, and said a MUF map showed a spot over the Adriatic with MUF of 280 MHz.

Jeff Hartley, N8II of West Virginia mentioned on June 16, "The bands have sounded pretty good despite the low solar flux, except for 12 and 10 meters. 15 meters is often open in our evening into Europe. 17 meters is open most days to Europe and Western Asia around 0200-0300Z, and I worked about 10 European and Asian stations on 15 meters via Es into F2 (beacon from VE1 heard on 10M) on Friday at 0230-0315Z. 15 meters was fantastic over long stretches in the All Asia contest, JAs were loud Sunday for over 2 hours 1330-1530Z. This is a fairly rare opening for us."

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net.

For more information concerning radio propagation, see the ARRL Technical Information Service web page at, http://arrl.org/propagation-of-rf-signals. For an explanation of the numbers used in this bulletin, see http://arrl.org/the-sun-the-earth-the-ionosphere. An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. More good information and tutorials on propagation are at http://k9la.us/.

Monthly propagation charts between four USA regions and twelve overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are at http://arrl.org/bulletins.

Sunspot numbers for June 13 through 19 were 45, 73, 101, 104, 110, 120, and 126, with a mean of 97. 10.7 cm flux was 98.9, 109.1, 111, 115.9, 123.8, 125, and 123.4, with a mean of 115.3. Estimated planetary A indices were 4, 4, 5, 3, 4, 5, and 5, with a mean of 4.3. Estimated mid-latitude A indices were 6, 5, 4, 3, 5, 7, and 4, with a mean of 4.9.

Kevin may be running a little late, and I know tens of millions of shortwave listeners across the USA are on the edge of their seats wanting to know what was covered on the most recent episode of The Great Liberty Nit-Wit-Net.

Wait no longer, my fellow SWL's .. we are up to the task yet again to bring you those details. It is our pleasure, as we listen every week and take meticulous notes of every twist and turn. When it comes to The Great Liberty Nit-Wit-Net, our motto is "no listener left behind".

After the customary roll-call, the members and guests of The Great Liberty Nit-Wit-Net launched right into exciting topics like:

Blah blah blah
Clinton's a crook
Bush is a crook
Gore is a crook
Biden's a crook
They're all crooks
Blah blah blah.

And so it went till the wee hours of Sunday morning.

Soooo .. there you have it. Tune in tonight for more.

Amateur radio event is rehearsal for disaster
Tribune-Review
“Its a really good day just to practice our skills,” said Fuksa, who remembers first becoming interested in amateur radio as a child listening to overseas broadcasts on his fathers shortwave radio. Now, as secretary of the Fort Armstrong Amateur ...
